APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Stream 2 and Wetlands S-DD, S-EE, and S-NN, Form 1 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [x] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [ ] Non-RPWs that flow directly or indirectly into TNWs
- [x] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [x] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [ ] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: 60.61 linear feet: 3 width (ft) and/or 5T acres.
   Wetlands: 4.33 acres.

   c. **Limits (boundaries) of jurisdiction** based on: 1987 Delineation Manual

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

- [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 7T

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: < 0.01 square miles
Drainage area: 625 square miles

Average annual rainfall: 47.28 inches
Average annual snowfall: 97.1 inches

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☑ Tributary flows through 2 tributaries before entering TNW.

Project waters are 5-10 river miles from TNW.
Project waters are 1 (or less) river miles from RPW.
Project waters are 5-10 aerial (straight) miles from TNW.
Project waters are 1 (or less) aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain: No

Identify flow route to TNW[5]: Stream 2, a seasonal RPW, flows into Stream 9, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☑ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width: 3 feet
Average depth: <0.01 feet
Average side slopes: 2:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [x] Cobbles
- [x] Gravel
- [ ] Muck
- [ ] Bedrock
- [ ] Vegetation. Type/% cover: 5T
- [ ] Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: The stream appeared to be stable and not eroding beyond what would expect to occur naturally.
Presence of run/riffle/pool complexes. Explain: No run/riffle/pool complexes were observed.
Tributary geometry: Relatively Straight
Tributary gradient (approximate average slope): 2%

(c) Flow:
Tributary provides for: Seasonal Flow
Estimate average number of flow events in review area/year: 20 (or greater)
Describe flow regime: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.
Other information on duration and volume: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

Surface flow is: Discrete and Confined Characteristics: There was a defined bed and bank,

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

Tributary has (check all that apply):

- [x] Bed and banks
- [x] OHWM[6] (check all indicators that apply):
  - [x] clear, natural line impressed on the bank
  - [ ] changes in the character of soil
  - [ ] shelving
  - [ ] vegetation matted down, bent, or absent
  - [ ] leaf litter disturbed or washed away
  - [ ] sediment deposition
  - [ ] water staining
  - [ ] other (list): 5T
  - [ ] the presence of litter and debris
  - [x] destruction of terrestrial vegetation
  - [ ] the presence of wrack line
  - [ ] sediment sorting
  - [ ] scour
  - [ ] multiple observed or predicted flow events
  - [ ] abrupt change in plant community 5T
- [ ] Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- [ ] High Tide Line indicated by:
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other (list): 5T
- [ ] Mean High Water Mark indicated by:
  - [ ] survey to available datum;
  - [ ] physical markings;
  - [ ] vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain: The stream originates from groundwater. The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground.
Identify specific pollutants, if known: It is not expected that any pollutants are affecting the stream.

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- [x] Riparian corridor. Characteristics (type, average width): > 100 feet of forested riparian buffer
- [ ] Wetland fringe. Characteristics: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:

Properties:

Wetland size: 4.33 acres

Wetland type. Explain: Forested and Emergent

Wetland quality. Explain: The wetlands appeared to be medium to high quality wetlands.

Project wetlands cross or serve as state boundaries. Explain: No.

(b) General Flow Relationship with Non-TNW:

Flow is: Intermittent Flow Explain: Water was observed flowing within the wetlands. The wetlands intercept groundwater during periods of higher groundwater.

Surface flow is: Overland Sheetflow

Characteristics: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:

- [x] Directly abutting
- [x] Not directly abutting
  - [x] Discrete wetland hydrologic connection. Explain: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.
  - [ ] Ecological connection. Explain: 5T
  - [ ] Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW

Project wetlands are 5-10 river miles from TNW.

Project waters are 5-10 aerial (straight) miles from TNW.

Flow is from: Wetland to Navigable Waters

Estimate approximate location of wetland as within the 500-year or greater floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground. In addition, there are low density single family residential homes located within the wetlands' watersheds.

Identify specific pollutants, if known: Pollutants typically associated with residential subdivisions.

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [x] Riparian buffer. Characteristics (type, average width): < 100 feet forested buffer
- [ ] Vegetation type/percent cover. Explain: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 3

Approximately (4.33) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)
Wetland S-DD (Y)	0.51	5T	5T
Wetland S-EE (N)	2.35	5T	5T
Wetland S-NN (Y)	1.47	5T	5T
5T	5T	5T	5T

Summarize overall biological, chemical and physical functions being performed: The wetlands store precipitation and stormwater runoff, filter pollutants, and settle sediment.

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: The stream supplies clean groundwater to the downstream TNW. The stream also transfers nutrients and organic carbon to the downstream TNW. These affects provide a significant nexus with the downstream TNW.

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: According to the Ohio Environmental Protection Agency's *Biological and Water Quality Study of the Aurora Branch Chagrin River 2012*, several nearby sampling locations did not meet aquatic life attainment status as a result of the following impairments: sedimentation/siltation and nutrient/eutrophication. These same causes of impairment are also evident in the Chagrin River itself. The on-site wetlands provide clean/cool water to the downstream TNW. Therefore, the wetlands help to reduce/ not contribute to additional impairments within the downstream TNW. (http://epa.ohio.gov/Portals/35/documents/Aurora_Branch_TSD.pdf)

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: 5T.
   - ☑ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

   Provide estimates for jurisdictional waters in the review area (check all that apply):

- [x] Tributary waters: 60.61 linear feet 3 width (ft).
- [ ] Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   ☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   - ☐ Tributary waters: 7T linear feet 7T width (ft).
   - ☐ Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   ☑ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
   - ☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: 5T
   - ☑ Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: **There was no upland observed between Stream 2 and Wetlands S-DD and S-NN.**

   Provide acreage estimates for jurisdictional wetlands in the review area: 2.86 acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   ☑ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: 1.47 acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   ☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: 7T acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   - ☐ Demonstrate that impoundment was created from "waters of the U.S.," or
   - ☐ Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   - ☐ Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

- ☐ which are or could be used by interstate or foreign travelers for recreational or other purposes.
- ☐ from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
- ☐ which are or could be used for industrial purposes by industries in interstate commerce.
- ☐ Interstate isolated waters. Explain: 5T
- ☐ Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
- ☐ Tributary waters: 7T linear feet 7T width (ft).
- ☐ Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T
- ☐ Wetlands: 7T acres.

[8]See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.
- ☐ Data sheets prepared by the Corps: 7T
- ☐ Corps navigable waters' study: 7T
- ☐ U.S. Geological Survey Hydrologic Atlas: 7T
  - ☐ USGS NHD data.
  - ☐ USGS 8 and 12 digit HUC maps.
- ☑ U.S. Geological Survey map(s). Cite scale & quad name: 7.5 min Twinsburg and Aurora, Ohio Quad
- ☐ USDA Natural Resources Conservation Service Soil Survey. Citation: 7T
- ☐ National wetlands inventory map(s). Cite name: 7T
- ☐ State/Local wetland inventory map(s): 7T
- ☐ FEMA/FIRM maps: 7T
- ☐ 100-year Floodplain Elevation is: 7T (National Geodectic Vertical Datum of 1929)
- ☐ Photographs: ☐ Aerial (Name & Date): 7T
  or ☐ Other (Name & Date): 7T
- ☐ Previous determination(s). File no. and date of response letter: 7T
- ☐ Applicable/supporting case law: 7T
- ☐ Applicable/supporting scientific literature: 7T
- ☐ Other information (please specify): 7T

B. ADDITIONAL COMMENTS TO SUPPORT JD: Stream 2, a seasonal RPW, flows into Stream 9, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.

7T

Date

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Stream 13 and Wetlands S-JJ and S-WW, and Open Water S-JJ, Form 10 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [ ] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [x] Non-RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [x] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [x] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: 623.38 linear feet: 2 width (ft) and/or 4.42 acres.
   Wetlands: 2.39 acres.

   c. **Limits (boundaries) of jurisdiction** based on: 1987 Delineation Manual

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

- [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 7T

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: < 0.01 square miles
Drainage area: 625 square miles

Average annual rainfall: 47.28 inches
Average annual snowfall: 97.1 inches

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☑ Tributary flows through 2 tributaries before entering TNW.

Project waters are 5-10 river miles from TNW.
Project waters are 1 (or less) river miles from RPW.
Project waters are 5-10 aerial (straight) miles from TNW.
Project waters are 1 (or less) aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain: No

Identify flow route to TNW[5]: Stream 13, a non-RPW, flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☑ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width: 3 feet
Average depth: <0.01 feet
Average side slopes: 2:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [x] Cobbles
- [x] Gravel
- [ ] Muck
- [ ] Bedrock
- [ ] Vegetation. Type/% cover: 5T
- [ ] Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: The stream appeared to be stable and not eroding beyond what would expect to occur naturally.
Presence of run/riffle/pool complexes. Explain: No run/riffle/pool complexes were observed.
Tributary geometry: Relatively Straight
Tributary gradient (approximate average slope): 2%

(c) Flow:
Tributary provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 20 (or greater)
Describe flow regime: Water was not flowing during the site visit. It had not rained prior to the site visit.
Other information on duration and volume: Water was not flowing during the site visit. It had not rained prior to the site visit.

Surface flow is: Discrete and Confined Characteristics: There was a defined bed and bank,

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

Tributary has (check all that apply):

- [x] Bed and banks
- [x] OHWM[6] (check all indicators that apply):
  - [x] clear, natural line impressed on the bank
  - [ ] the presence of litter and debris
  - [ ] changes in the character of soil
  - [x] destruction of terrestrial vegetation
  - [ ] shelving
  - [ ] the presence of wrack line
  - [ ] vegetation matted down, bent, or absent
  - [ ] sediment sorting
  - [ ] leaf litter disturbed or washed away
  - [ ] scour
  - [ ] sediment deposition
  - [ ] multiple observed or predicted flow events
  - [ ] water staining
  - [ ] abrupt change in plant community 5T
  - [ ] other (list): 5T
- [ ] Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- [ ] High Tide Line indicated by:
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other (list): 5T
- [ ] Mean High Water Mark indicated by:
  - [ ] survey to available datum;
  - [ ] physical markings;
  - [ ] vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain: The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground.
Identify specific pollutants, if known: It is not expected that any pollutants are affecting the stream.

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- [x] Riparian corridor. Characteristics (type, average width): > 100 feet of forested riparian buffer
- [ ] Wetland fringe. Characteristics: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:

Properties:

Wetland size: 2.39 acres

Wetland type. Explain: Emergent

Wetland quality. Explain: The wetlands appeared to be low to medium quality wetlands.

Project wetlands cross or serve as state boundaries. Explain: No.

(b) General Flow Relationship with Non-TNW:

Flow is: Intermittent Flow Explain: Water was observed flowing within the wetlands. The wetlands intercept groundwater during periods of higher groundwater.

Surface flow is: Overland Sheetflow

Characteristics: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:

- [x] Directly abutting
- [x] Not directly abutting
  - [x] Discrete wetland hydrologic connection. Explain: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.
  - [ ] Ecological connection. Explain: 5T
  - [ ] Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW

Project wetlands are 5-10 river miles from TNW.

Project waters are 5-10 aerial (straight) miles from TNW.

Flow is from: Wetland to Navigable Waters

Estimate approximate location of wetland as within the 500-year or greater floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground. In addition, there is commercial development located within the wetlands' watersheds.

Identify specific pollutants, if known: Pollutants typically associated with commercial developments.

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [x] Riparian buffer. Characteristics (type, average width): < 100 feet forested buffer
- [ ] Vegetation type/percent cover. Explain: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 2

Approximately (2.39) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)
Wetland S-JJ (Y)	2.38	5T	5T
Wetland S-WW (Y)	0.01	5T	5T
	5T	5T	
5T	5T	5T	5T

Summarize overall biological, chemical and physical functions being performed: The wetlands store precipitation and stormwater runoff, filter pollutants, and settle sediment.

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: The stream supplies clean groundwater to the downstream TNW. The stream also transfers nutrients and organic carbon to the downstream TNW. These affects provide a significant nexus with the downstream TNW.

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: According to the Ohio Environmental Protection Agency's *Biological and Water Quality Study of the Aurora Branch Chagrin River 2012*, several nearby sampling locations did not meet aquatic life attainment status as a result of the following impairments: sedimentation/siltation and nutrient/eutrophication. These same causes of impairment are also evident in the Chagrin River itself. The on-site wetlands provide clean/cool water to the downstream TNW. Therefore, the wetlands help to reduce/ not contribute to additional impairments within the downstream TNW. (http://epa.ohio.gov/Portals/35/documents/Aurora_Branch_TSD.pdf)

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: 5T.
   - ☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

   Provide estimates for jurisdictional waters in the review area (check all that apply):
   - ☐ Tributary waters: linear feet width (ft).
   - ☐ Other non-wetland waters: 7T acres.

Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   - [x] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   - [x] Tributary waters: 623.38 linear feet 2 width (ft).
   - [ ] Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: 5T
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:

   Provide acreage estimates for jurisdictional wetlands in the review area: acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   - [x] Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: 2.39 acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   - [x] Demonstrate that impoundment was created from "waters of the U.S.," or
   - [ ] Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   - [ ] Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

- [ ] which are or could be used by interstate or foreign travelers for recreational or other purposes.
- [ ] from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
- [ ] which are or could be used for industrial purposes by industries in interstate commerce.
- [ ] Interstate isolated waters. Explain: 5T
- [ ] Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
- [ ] Tributary waters: 7T linear feet 7T width (ft).
- [ ] Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T
- [ ] Wetlands: 7T acres.

[8]See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.
- ☐ Data sheets prepared by the Corps: 7T
- ☐ Corps navigable waters' study: 7T
- ☐ U.S. Geological Survey Hydrologic Atlas: 7T
  - ☐ USGS NHD data.
  - ☐ USGS 8 and 12 digit HUC maps.
- ☑ U.S. Geological Survey map(s). Cite scale & quad name: 7.5 min Twinsburg and Aurora, Ohio Quad
- ☐ USDA Natural Resources Conservation Service Soil Survey. Citation: 7T
- ☐ National wetlands inventory map(s). Cite name: 7T
- ☐ State/Local wetland inventory map(s): 7T
- ☐ FEMA/FIRM maps: 7T
- ☐ 100-year Floodplain Elevation is: 7T (National Geodectic Vertical Datum of 1929)
- ☐ Photographs: ☐ Aerial (Name & Date): 7T
  - ☐ or ☐ Other (Name & Date): 7T
- ☐ Previous determination(s). File no. and date of response letter: 7T
- ☐ Applicable/supporting case law: 7T
- ☐ Applicable/supporting scientific literature: 7T
- ☐ Other information (please specify): 7T

B. ADDITIONAL COMMENTS TO SUPPORT JD: Stream 13, a non-RPW, flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.

In addition, open water S-JJ is an impoundment of Stream 13. Stream 13 flows directly into the open water. There is an impoundment blocking flow from Stream 13.

7T

Date

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Stream 14 and Wetlands S-S, S-Q, S-VV, S-W, S-V, S-X, S-AAA, S-P, S-II, S-HH, and S-GG, Form 11 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [ ] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [x] Non-RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [x] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [ ] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: 433.18 linear feet: 2 width (ft) and/or acres.
   Wetlands: 0.51 acres.

   c. **Limits (boundaries) of jurisdiction** based on: 1987 Delineation Manual

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

- [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 7T

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: < 0.01 square miles
Drainage area: 625 square miles

Average annual rainfall: 47.28 inches
Average annual snowfall: 97.1 inches

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☑ Tributary flows through 3 tributaries before entering TNW.

Project waters are 5-10 river miles from TNW.
Project waters are 1 (or less) river miles from RPW.
Project waters are 5-10 aerial (straight) miles from TNW.
Project waters are 1 (or less) aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain: No

Identify flow route to TNW[5]: Stream 14, a non-RPW, flows into Stream 13, a non-RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☑ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width: 3 feet
Average depth: <0.01 feet
Average side slopes: 2:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [x] Cobbles
- [x] Gravel
- [ ] Muck
- [ ] Bedrock
- [ ] Vegetation. Type/% cover: 5T
- [ ] Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: The stream appeared to be stable and not eroding beyond what would expect to occur naturally.
Presence of run/riffle/pool complexes. Explain: No run/riffle/pool complexes were observed.
Tributary geometry: Relatively Straight
Tributary gradient (approximate average slope): 2%

(c) Flow:
Tributary provides for: Ephemeral Flow
Estimate average number of flow events in review area/year: 20 (or greater)
Describe flow regime: Water was not flowing during the site visit. It had not rained prior to the site visit.
Other information on duration and volume: Water was not flowing during the site visit. It had not rained prior to the site visit.

Surface flow is: Discrete and Confined Characteristics: There was a defined bed and bank,

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

Tributary has (check all that apply):

- [x] Bed and banks
- [x] OHWM[6] (check all indicators that apply):
  - [x] clear, natural line impressed on the bank
  - [ ] the presence of litter and debris
  - [ ] changes in the character of soil
  - [x] destruction of terrestrial vegetation
  - [ ] shelving
  - [ ] the presence of wrack line
  - [ ] vegetation matted down, bent, or absent
  - [ ] sediment sorting
  - [ ] leaf litter disturbed or washed away
  - [ ] scour
  - [ ] sediment deposition
  - [ ] multiple observed or predicted flow events
  - [ ] water staining
  - [ ] abrupt change in plant community 5T
  - [ ] other (list): 5T
- [ ] Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- [ ] High Tide Line indicated by:
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other (list): 5T
- [ ] Mean High Water Mark indicated by:
  - [ ] survey to available datum;
  - [ ] physical markings;
  - [ ] vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain: The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground.
Identify specific pollutants, if known: It is not expected that any pollutants are affecting the stream.

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- [x] Riparian corridor. Characteristics (type, average width): > 100 feet of forested riparian buffer
- [ ] Wetland fringe. Characteristics: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:

Properties:

Wetland size: 0.51 acres

Wetland type. Explain: Emergent and Forested

Wetland quality. Explain: The wetlands appeared to be low to medium quality wetlands.

Project wetlands cross or serve as state boundaries. Explain: No.

(b) General Flow Relationship with Non-TNW:

Flow is: Intermittent Flow Explain: Water was observed flowing within the wetlands. The wetlands intercept groundwater during periods of higher groundwater.

Surface flow is: Overland Sheetflow

Characteristics: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:

- [x] Directly abutting
- [x] Not directly abutting
  - [x] Discrete wetland hydrologic connection. Explain: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.
  - [ ] Ecological connection. Explain: 5T
  - [ ] Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW

Project wetlands are 5-10 river miles from TNW.

Project waters are 5-10 aerial (straight) miles from TNW.

Flow is from: Wetland to Navigable Waters

Estimate approximate location of wetland as within the 500-year or greater floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground. In addition, there is commercial development located within the wetlands' watersheds.

Identify specific pollutants, if known: Pollutants typically associated with commercial developments.

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [x] Riparian buffer. Characteristics (type, average width): < 100 feet forested buffer
- [ ] Vegetation type/percent cover. Explain: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 11

Approximately (0.51) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)	
Wetland S-S (Y)	0.01	Wetland S-Q (N)	0.01	
Wetland S-VV (Y)	0.03	Wetland S-W (N)	0.02	
Wetland S-V (N)	0.02	Wetland S-X (N)	0.07 5T	5T
Wetland S-AAA (N)	0.11	Wetland S-P (N)	0.11	
Wetland S-II (N)	0.03	Wetland S-HH (N)	0.09	
Wetland S-GG (N)	0.01			

Summarize overall biological, chemical and physical functions being performed: The wetlands store precipitation and stormwater runoff, filter pollutants, and settle sediment.

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: The stream supplies clean groundwater to the downstream TNW. The stream also transfers nutrients and organic carbon to the downstream TNW. These affects provide a significant nexus with the downstream TNW.

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: According to the Ohio Environmental Protection Agency's *Biological and Water Quality Study of the Aurora Branch Chagrin River 2012*, several nearby sampling locations did not meet aquatic life attainment status as a result of the following impairments: sedimentation/siltation and nutrient/eutrophication. These same causes of impairment are also evident in the Chagrin River itself. The on-site wetlands provide clean/cool water to the downstream TNW. Therefore, the wetlands help to reduce/ not contribute to additional impairments within the downstream TNW. (http://epa.ohio.gov/Portals/35/documents/Aurora_Branch_TSD.pdf)

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: 5T.
   - ☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

   Provide estimates for jurisdictional waters in the review area (check all that apply):

- [ ] Tributary waters: linear feet width (ft).
- [ ] Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   - [x] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   - [x] Tributary waters: 433.18 linear feet 2 width (ft).
   - [ ] Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: 5T
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:

   Provide acreage estimates for jurisdictional wetlands in the review area: acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   - [ ] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   - [x] Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: 0.51 acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   - [ ] Demonstrate that impoundment was created from "waters of the U.S.," or
   - [ ] Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   - [ ] Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

- [ ] which are or could be used by interstate or foreign travelers for recreational or other purposes.
- [ ] from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
- [ ] which are or could be used for industrial purposes by industries in interstate commerce.
- [ ] Interstate isolated waters. Explain: 5T
- [ ] Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
- [ ] Tributary waters: 7T linear feet 7T width (ft).
- [ ] Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T
- [ ] Wetlands: 7T acres.

[8]See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.
- ☐ Data sheets prepared by the Corps: 7T
- ☐ Corps navigable waters' study: 7T
- ☐ U.S. Geological Survey Hydrologic Atlas: 7T
  - ☐ USGS NHD data.
  - ☐ USGS 8 and 12 digit HUC maps.
- ☑ U.S. Geological Survey map(s). Cite scale & quad name: 7.5 min Twinsburg and Aurora, Ohio Quad
- ☐ USDA Natural Resources Conservation Service Soil Survey. Citation: 7T
- ☐ National wetlands inventory map(s). Cite name: 7T
- ☐ State/Local wetland inventory map(s): 7T
- ☐ FEMA/FIRM maps: 7T
- ☐ 100-year Floodplain Elevation is: 7T (National Geodectic Vertical Datum of 1929)
- ☐ Photographs: ☐ Aerial (Name & Date): 7T
  - ☐ or ☐ Other (Name & Date): 7T
- ☐ Previous determination(s). File no. and date of response letter: 7T
- ☐ Applicable/supporting case law: 7T
- ☐ Applicable/supporting scientific literature: 7T
- ☐ Other information (please specify): 7T

B. ADDITIONAL COMMENTS TO SUPPORT JD: Stream 14, a non-RPW, flows into Stream 13, a non-RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.

7T

Date

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Stream 17, Form 12 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [x] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [ ] Non-RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [ ] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: 87.69 linear feet: 3 width (ft) and/or 5T acres.
   Wetlands: 5T acres.

   c. **Limits (boundaries) of jurisdiction** based on: Established by OHWM

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

- [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 7T

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: < 0.01 square miles
Drainage area: 625 square miles

Average annual rainfall: 47.28 inches
Average annual snowfall: 97.1 inches

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☑ Tributary flows through 2 tributaries before entering TNW.

Project waters are 5-10 river miles from TNW.
Project waters are 1 (or less) river miles from RPW.
Project waters are 5-10 aerial (straight) miles from TNW.
Project waters are 1 (or less) aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain: No

Identify flow route to TNW[5]: Stream 12, a seasonal RPW, flows into Stream 13, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☑ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width: 3 feet
Average depth: <0.01 feet
Average side slopes: 2:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [x] Cobbles
- [x] Gravel
- [ ] Muck
- [ ] Bedrock
- [ ] Vegetation. Type/% cover: 5T
- [ ] Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: The stream appeared to be stable and not eroding beyond what would expect to occur naturally.
Presence of run/riffle/pool complexes. Explain: No run/riffle/pool complexes were observed.
Tributary geometry: Relatively Straight
Tributary gradient (approximate average slope): 2%

(c) Flow:
Tributary provides for: Seasonal Flow
Estimate average number of flow events in review area/year: 20 (or greater)
Describe flow regime: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.
Other information on duration and volume: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

Surface flow is: Discrete and Confined Characteristics: There was a defined bed and bank,

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

Tributary has (check all that apply):

- [x] Bed and banks
- [x] OHWM[6] (check all indicators that apply):
  - [x] clear, natural line impressed on the bank
  - [ ] changes in the character of soil
  - [ ] shelving
  - [ ] vegetation matted down, bent, or absent
  - [ ] leaf litter disturbed or washed away
  - [ ] sediment deposition
  - [ ] water staining
  - [ ] other (list): 5T
  - [ ] the presence of litter and debris
  - [x] destruction of terrestrial vegetation
  - [ ] the presence of wrack line
  - [ ] sediment sorting
  - [ ] scour
  - [ ] multiple observed or predicted flow events
  - [ ] abrupt change in plant community 5T
- [ ] Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- [ ] High Tide Line indicated by:
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other (list): 5T
- [ ] Mean High Water Mark indicated by:
  - [ ] survey to available datum;
  - [ ] physical markings;
  - [ ] vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain: The stream originates from groundwater. The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground.
Identify specific pollutants, if known: It is not expected that any pollutants are affecting the stream.

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- [x] Riparian corridor. Characteristics (type, average width): > 100 feet of forested riparian buffer
- [ ] Wetland fringe. Characteristics: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:
Properties:
Wetland size: 5T acres
Wetland type. Explain: 5T
Wetland quality. Explain: 5T
Project wetlands cross or serve as state boundaries. Explain: 5T

(b) General Flow Relationship with Non-TNW:
Flow is: 5T Explain: 5T

Surface flow is: 5T
Characteristics: 5T

Subsurface flow: 5T Explain findings: 5T
- [ ] Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:
- [ ] Directly abutting
- [ ] Not directly abutting
  - [ ] Discrete wetland hydrologic connection. Explain: 5T
  - [ ] Ecological connection. Explain: 5T
  - [ ] Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW
Project wetlands are 5T river miles from TNW.
Project waters are 5T aerial (straight) miles from TNW.
Flow is from: 5T
Estimate approximate location of wetland as within the 5T floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: 5T
Identify specific pollutants, if known: 5T

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [ ] Riparian buffer. Characteristics (type, average width): 5T
- [ ] Vegetation type/percent cover. Explain: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 5T
Approximately (5T) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)
5T	5T	5T	5T
5T	5T	5T	5T
5T	5T	5T	5T
5T	5T	5T	5T

Summarize overall biological, chemical and physical functions being performed: 5T

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: The stream supplies clean groundwater to the downstream TNW. The stream also transfers nutrients and organic carbon to the downstream TNW. These affects provide a significant nexus with the downstream TNW.

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: 5T.
   - ☑ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

   Provide estimates for jurisdictional waters in the review area (check all that apply):
   - ☑ Tributary waters: 87.69 linear feet 3 width (ft).
   - ☐ Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   ☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   ☐ Tributary waters: 7T linear feet 7T width (ft).
   ☐ Other non-wetland waters: 7T acres.
   Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   ☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
   ☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: 5T
   ☐ Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: **7T**

   Provide acreage estimates for jurisdictional wetlands in the review area: 7T acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   ☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: 5T acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   ☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: 7T acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   ☐ Demonstrate that impoundment was created from "waters of the U.S.," or
   ☐ Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   ☐ Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

☐ which are or could be used by interstate or foreign travelers for recreational or other purposes.
☐ from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
☐ which are or could be used for industrial purposes by industries in interstate commerce.
☐ Interstate isolated waters. Explain: 5T
☐ Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
☐ Tributary waters: 7T linear feet 7T width (ft).
☐ Other non-wetland waters: 7T acres.
Identify type(s) of waters: 7T
☐ Wetlands: 7T acres.

[8]See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.
- ☐ Data sheets prepared by the Corps: 7T
- ☐ Corps navigable waters' study: 7T
- ☐ U.S. Geological Survey Hydrologic Atlas: 7T
  - ☐ USGS NHD data.
  - ☐ USGS 8 and 12 digit HUC maps.
- ☑ U.S. Geological Survey map(s). Cite scale & quad name: 7.5 min Twinsburg and Aurora, Ohio Quad
- ☐ USDA Natural Resources Conservation Service Soil Survey. Citation: 7T
- ☐ National wetlands inventory map(s). Cite name: 7T
- ☐ State/Local wetland inventory map(s): 7T
- ☐ FEMA/FIRM maps: 7T
- ☐ 100-year Floodplain Elevation is: 7T (National Geodectic Vertical Datum of 1929)
- ☐ Photographs: ☐ Aerial (Name & Date): 7T
  - ☐ or ☐ Other (Name & Date): 7T
- ☐ Previous determination(s). File no. and date of response letter: 7T
- ☐ Applicable/supporting case law: 7T
- ☐ Applicable/supporting scientific literature: 7T
- ☐ Other information (please specify): 7T

B. ADDITIONAL COMMENTS TO SUPPORT JD: Stream 17, a seasonal RPW, flows into Stream 9, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.

7T

Date

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Wetlands S-G, S-H, S-UU, S-TT, A, B, D, F, G, H, I, J, AO, and AP, and open water, Form 13 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [ ] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [ ] Non-RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [x] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [ ] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: linear feet: width (ft) and/or acres.
   Wetlands: 25.76 acres.

   c. **Limits (boundaries) of jurisdiction** based on: 1987 Delineation Manual

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

- [x] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: Wetlands S-H and S-G, and open water were observed to be hydrologically isolated from the downstream TNW. Therefore, they are considered to be isolated waters.

---

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: 5T
Drainage area: 5T

Average annual rainfall:
Average annual snowfall: 9

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☐ Tributary flows through 5T tributaries before entering TNW.

Project waters are 5T river miles from TNW.
Project waters are 5T river miles from RPW.
Project waters are 5T aerial (straight) miles from TNW.
Project waters are 5T aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW[5]:
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☐ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width:
Average depth:
Average side slopes: 5T

Primary tributary substrate composition (check all that apply):

- ☐ Silts
- ☐ Sands
- ☐ Concrete
- ☐ Cobbles
- ☐ Gravel
- ☐ Muck
- ☐ Bedrock
- ☐ Vegetation. Type/% cover: 5T
- ☐ Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain:
Presence of run/riffle/pool complexes. Explain:
Tributary geometry: 5T
Tributary gradient (approximate average slope): %

(c) Flow:
Tributary provides for: 5T
Estimate average number of flow events in review area/year: 5T
Describe flow regime:
Other information on duration and volume:

Surface flow is: 5T Characteristics:

Subsurface flow: Unknown Explain findings: 5T
- ☐ Dye (or other) test performed: 5T

Tributary has (check all that apply):
- ☐ Bed and banks
- ☐ OHWM[6] (check all indicators that apply):
  - ☐ clear, natural line impressed on the bank
  - ☐ changes in the character of soil
  - ☐ shelving
  - ☐ vegetation matted down, bent, or absent
  - ☐ leaf litter disturbed or washed away
  - ☐ sediment deposition
  - ☐ water staining
  - ☐ other (list): 5T
  - ☐ the presence of litter and debris
  - ☐ destruction of terrestrial vegetation
  - ☐ the presence of wrack line
  - ☐ sediment sorting
  - ☐ scour
  - ☐ multiple observed or predicted flow events
  - ☐ abrupt change in plant community 5T
- ☐ Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):
- ☐ High Tide Line indicated by:
  - ☐ oil or scum line along shore objects
  - ☐ fine shell or debris deposits (foreshore)
  - ☐ physical markings/characteristics
  - ☐ tidal gauges
  - ☐ other (list): 5T
- ☐ Mean High Water Mark indicated by:
  - ☐ survey to available datum;
  - ☐ physical markings;
  - ☐ vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain:
Identify specific pollutants, if known:

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- ☐ Riparian corridor. Characteristics (type, average width):
- ☐ Wetland fringe. Characteristics: 5T
- ☐ Habitat for:
  - ☐ Federally Listed species. Explain findings: 5T
  - ☐ Fish/spawn areas. Explain findings: 5T
  - ☐ Other environmentally-sensitive species. Explain findings: 5T
  - ☐ Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:

Properties:

Wetland size: 25.76 acres

Wetland type. Explain: Emergent and Forested

Wetland quality. Explain: The wetlands appeared to be medium to high quality wetlands.

Project wetlands cross or serve as state boundaries. Explain: No.

(b) General Flow Relationship with Non-TNW:

Flow is: Intermittent Flow Explain: Water was observed flowing within the wetlands. The wetlands intercept groundwater during periods of higher groundwater.

Surface flow is: Overland Sheetflow

Characteristics: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.

Subsurface flow: Unknown Explain findings: 5T

- ☐ Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:

- ☑ Directly abutting
- ☑ Not directly abutting
  - ☑ Discrete wetland hydrologic connection. Explain: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.
  - ☐ Ecological connection. Explain: 5T
  - ☐ Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW

Project wetlands are 5-10 river miles from TNW.

Project waters are 5-10 aerial (straight) miles from TNW.

Flow is from: Wetland to Navigable Waters

Estimate approximate location of wetland as within the 500-year or greater floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground. In addition, there is commercial development located within the wetlands' watersheds.

Identify specific pollutants, if known: Pollutants typically associated with commercial developments.

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☑ Riparian buffer. Characteristics (type, average width): < 100 feet forested buffer
- ☐ Vegetation type/percent cover. Explain: 5T
- ☐ Habitat for:
  - ☐ Federally Listed species. Explain findings: 5T
  - ☐ Fish/spawn areas. Explain findings: 5T
  - ☐ Other environmentally-sensitive species. Explain findings: 5T
  - ☐ Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 12

Approximately (25.76) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)	
Wetland S-UU (N)	0.09	Wetland G (N)	0.47	
Wetland S-TT (N)	0.19	Wetland H (N)	0.50	
Wetland AO (N)	0.44	Wetland I (N)	0.24 5T	5T
WETLAND AP (N)	0.13	Wetland J (N)	2.63	
Wetland D (N)	13.66	Wetland F (N)	0.16	
Wetland A (N)	7.19	Wetland B (N)	0.06	

Summarize overall biological, chemical and physical functions being performed: The wetlands store precipitation and stormwater runoff, filter pollutants, and settle sediment.

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D:

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: According to the Ohio Environmental Protection Agency's *Biological and Water Quality Study of the Aurora Branch Chagrin River 2012*, several nearby sampling locations did not meet aquatic life attainment status as a result of the following impairments: sedimentation/siltation and nutrient/eutrophication. These same causes of impairment are also evident in the Chagrin River itself. The on-site wetlands provide clean/cool water to the downstream TNW. Therefore, the wetlands help to reduce/ not contribute to additional impairments within the downstream TNW. (http://epa.ohio.gov/Portals/35/documents/Aurora_Branch_TSD.pdf)

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial:
   - ☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

   Provide estimates for jurisdictional waters in the review area (check all that apply):
   - ☐ Tributary waters: linear feet width (ft).

☐ Other non-wetland waters: 7T acres.
Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   - [ ] Tributary waters: linear feet width (ft).
   - [ ] Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   - [ ] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:

   Provide acreage estimates for jurisdictional wetlands in the review area: acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   - [x] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: 25.76 acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   - [ ] Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   - [ ] Demonstrate that impoundment was created from "waters of the U.S.," or
   - [ ] Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   - [ ] Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

- [ ] which are or could be used by interstate or foreign travelers for recreational or other purposes.
- [ ] from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
- [ ] which are or could be used for industrial purposes by industries in interstate commerce.
- [ ] Interstate isolated waters. Explain: 5T
- [ ] Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
- [ ] Tributary waters: 7T linear feet 7T width (ft).
- [ ] Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T
- [ ] Wetlands: 7T acres.

[8] See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☑ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☑ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☑ Lakes/ponds: 7.40 acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☑ Wetlands: 3.87 acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.
- ☐ Data sheets prepared by the Corps: 7T
- ☐ Corps navigable waters' study: 7T
- ☐ U.S. Geological Survey Hydrologic Atlas: 7T
  - ☐ USGS NHD data.
  - ☐ USGS 8 and 12 digit HUC maps.
- ☑ U.S. Geological Survey map(s). Cite scale & quad name: 7.5 min Twinsburg and Aurora, Ohio Quad
- ☐ USDA Natural Resources Conservation Service Soil Survey. Citation: 7T
- ☐ National wetlands inventory map(s). Cite name: 7T
- ☐ State/Local wetland inventory map(s): 7T
- ☐ FEMA/FIRM maps: 7T
- ☐ 100-year Floodplain Elevation is: 7T (National Geodectic Vertical Datum of 1929)
- ☐ Photographs: ☐ Aerial (Name & Date): 7T
  or ☐ Other (Name & Date): 7T
- ☐ Previous determination(s). File no. and date of response letter: 7T
- ☐ Applicable/supporting case law: 7T
- ☐ Applicable/supporting scientific literature: 7T
- ☐ Other information (please specify): 7T

B. ADDITIONAL COMMENTS TO SUPPORT JD: All jurisdictional wetlands on this form flow off-site and connect with the Aurora Branch of the Chagrin River. The Aurora Branch was not characterized as part of the field assessment as it is located off-site. According to the USGS Quad, it is a perennial stream.

7T

Date

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Stream 4 and Wetlands S-A, S-B, S-C, S-CC, S-ZZ, S-YY, S-XX, S-D, S-I, S-L, S-K, S-J, S-M, S-N, S-O, S-F, S-E, S-RR, and S-SS, Form 2 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [x] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [ ] Non-RPWs that flow directly or indirectly into TNWs
- [x] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [x] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [ ] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: 188.22 linear feet: 5 width (ft) and/or acres.
   Wetlands: 10.58 acres.

   c. **Limits (boundaries) of jurisdiction** based on: 1987 Delineation Manual

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

☐ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 7T

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: 5T
Drainage area: 5T

Average annual rainfall:
Average annual snowfall: 9

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☐ Tributary flows through 5T tributaries before entering TNW.

Project waters are 5T river miles from TNW.
Project waters are 5T river miles from RPW.
Project waters are 5T aerial (straight) miles from TNW.
Project waters are 5T aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW[5]:
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☐ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width:
Average depth:
Average side slopes: 5T

Primary tributary substrate composition (check all that apply):

- ☐ Silts
- ☐ Sands
- ☐ Concrete
- ☐ Cobbles
- ☐ Gravel
- ☐ Muck
- ☐ Bedrock
- ☐ Vegetation. Type/% cover: 5T
- ☐ Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain:
Presence of run/riffle/pool complexes. Explain:
Tributary geometry: 5T
Tributary gradient (approximate average slope): %

(c) Flow:
Tributary provides for: 5T
Estimate average number of flow events in review area/year: 5T
Describe flow regime:
Other information on duration and volume:

Surface flow is: 5T Characteristics:

Subsurface flow: Unknown Explain findings: 5T
- ☐ Dye (or other) test performed: 5T

Tributary has (check all that apply):
- ☐ Bed and banks
- ☐ OHWM[6] (check all indicators that apply):
  - ☐ clear, natural line impressed on the bank
  - ☐ changes in the character of soil
  - ☐ shelving
  - ☐ vegetation matted down, bent, or absent
  - ☐ leaf litter disturbed or washed away
  - ☐ sediment deposition
  - ☐ water staining
  - ☐ other (list): 5T
  - ☐ the presence of litter and debris
  - ☐ destruction of terrestrial vegetation
  - ☐ the presence of wrack line
  - ☐ sediment sorting
  - ☐ scour
  - ☐ multiple observed or predicted flow events
  - ☐ abrupt change in plant community 5T
- ☐ Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):
- ☐ High Tide Line indicated by:
  - ☐ oil or scum line along shore objects
  - ☐ fine shell or debris deposits (foreshore)
  - ☐ physical markings/characteristics
  - ☐ tidal gauges
  - ☐ other (list): 5T
- ☐ Mean High Water Mark indicated by:
  - ☐ survey to available datum;
  - ☐ physical markings;
  - ☐ vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain:
Identify specific pollutants, if known:

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- ☐ Riparian corridor. Characteristics (type, average width):
- ☐ Wetland fringe. Characteristics: 5T
- ☐ Habitat for:
  - ☐ Federally Listed species. Explain findings: 5T
  - ☐ Fish/spawn areas. Explain findings: 5T
  - ☐ Other environmentally-sensitive species. Explain findings: 5T
  - ☐ Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:

Properties:

Wetland size: 9.0 acres

Wetland type. Explain: Emergent and Forested

Wetland quality. Explain: The wetlands appeared to be medium to high quality wetlands.

Project wetlands cross or serve as state boundaries. Explain: No.

(b) General Flow Relationship with Non-TNW:

Flow is: Intermittent Flow Explain: Water was observed flowing within the wetlands. The wetlands intercept groundwater during periods of higher groundwater.

Surface flow is: Overland Sheetflow

Characteristics: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.

Subsurface flow: Unknown Explain findings: 5T

- ☐ Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:

- ☑ Directly abutting
- ☑ Not directly abutting
  - ☑ Discrete wetland hydrologic connection. Explain: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.
  - ☐ Ecological connection. Explain: 5T
  - ☐ Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW

Project wetlands are 5-10 river miles from TNW.

Project waters are 5-10 aerial (straight) miles from TNW.

Flow is from: Wetland to Navigable Waters

Estimate approximate location of wetland as within the 500-year or greater floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground. In addition, there is commercial development located within the wetlands' watersheds.

Identify specific pollutants, if known: Pollutants typically associated with commercial developments.

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☑ Riparian buffer. Characteristics (type, average width): < 100 feet forested buffer
- ☐ Vegetation type/percent cover. Explain: 5T
- ☐ Habitat for:
  - ☐ Federally Listed species. Explain findings: 5T
  - ☐ Fish/spawn areas. Explain findings: 5T
  - ☐ Other environmentally-sensitive species. Explain findings: 5T
  - ☐ Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 15-20

Approximately (10.58) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)	
Wetland S-A (Y)	4.03	Wetland S-XX (N)	0.26	
Wetland S-B (Y)	0.40	Wetland S-I (N)	0.22	
Wetland S-CC (N)	1.01	Wetland S-L (N)	0.04 5T	5T
Wetland S-C (N)	0.10	Wetland S-K (N)	0.55	
Wetland S-ZZ (N)	1.01	Wetland S-J (N)	0.13	
Wetland S-YY (N)	0.31	Wetland S-M (N)	0.02	
Wetland S-N (N)	0.04	Wetland S-O (N)	0.19	
Wetland S-F (N)	0.08	Wetland S-E (N)	0.41	
Wetland S-RR (N)	0.38	Wetland S-SS (N)	0.05	
Wetland S-D (N)	1.37			

Summarize overall biological, chemical and physical functions being performed: The wetlands store precipitation and stormwater runoff, filter pollutants, and settle sediment.

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D:

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: According to the Ohio Environmental Protection Agency's *Biological and Water Quality Study of the Aurora Branch Chagrin River 2012*, several nearby sampling locations did not meet aquatic life attainment status as a result of the following impairments: sedimentation/siltation and nutrient/eutrophication. These same causes of impairment are also evident in the Chagrin River itself. The on-site wetlands provide clean/cool water to the downstream TNW. Therefore, the wetlands help to reduce/ not contribute to additional impairments within the downstream TNW. (http://epa.ohio.gov/Portals/35/documents/Aurora_Branch_TSD.pdf)

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☑ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: Stream 4 is identified as perennial on the USGS Quad.
   - ☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional.

Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review area (check all that apply):

- [x] Tributary waters: 188.22 linear feet 5 width (ft).
- [ ] Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   - [ ] Tributary waters: linear feet width (ft).
   - [ ] Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   - [x] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [x] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: There was no upland observed between Stream 4 and Wetlands S-A, S-B, and S-CC.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:

   Provide acreage estimates for jurisdictional wetlands in the review area: 5.44 acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   - [x] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: 5.14 acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   - [ ] Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   - [ ] Demonstrate that impoundment was created from "waters of the U.S.," or
   - [ ] Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   - [ ] Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

- [ ] which are or could be used by interstate or foreign travelers for recreational or other purposes.
- [ ] from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
- [ ] which are or could be used for industrial purposes by industries in interstate commerce.
- [ ] Interstate isolated waters. Explain: 5T
- [ ] Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
- [ ] Tributary waters: 7T linear feet 7T width (ft).
- [ ] Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T
- [ ] Wetlands: 7T acres.

[8]See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.
- ☐ Data sheets prepared by the Corps: 7T
- ☐ Corps navigable waters' study: 7T
- ☐ U.S. Geological Survey Hydrologic Atlas: 7T
  - ☐ USGS NHD data.
  - ☐ USGS 8 and 12 digit HUC maps.
- ☑ U.S. Geological Survey map(s). Cite scale & quad name: 7.5 min Twinsburg and Aurora, Ohio Quad
- ☐ USDA Natural Resources Conservation Service Soil Survey. Citation: 7T
- ☐ National wetlands inventory map(s). Cite name: 7T
- ☐ State/Local wetland inventory map(s): 7T
- ☐ FEMA/FIRM maps: 7T
- ☐ 100-year Floodplain Elevation is: 7T (National Geodectic Vertical Datum of 1929)
- ☐ Photographs: ☐ Aerial (Name & Date): 7T
  or ☐ Other (Name & Date): 7T
- ☐ Previous determination(s). File no. and date of response letter: 7T
- ☐ Applicable/supporting case law: 7T
- ☐ Applicable/supporting scientific literature: 7T
- ☐ Other information (please specify): 7T

B. ADDITIONAL COMMENTS TO SUPPORT JD: Stream 4, an RPW, flows into Stream 9, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.

7T

Date

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Stream 5, Form 3 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [x] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [ ] Non-RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [ ] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: 72.22 linear feet: 3 width (ft) and/or 5T acres.
   Wetlands: 5T acres.

   c. **Limits (boundaries) of jurisdiction** based on: Established by OHWM

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

- [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 7T

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: < 0.01 square miles
Drainage area: 625 square miles

Average annual rainfall: 47.28 inches
Average annual snowfall: 97.1 inches

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☑ Tributary flows through 2 tributaries before entering TNW.

Project waters are 5-10 river miles from TNW.
Project waters are 1 (or less) river miles from RPW.
Project waters are 5-10 aerial (straight) miles from TNW.
Project waters are 1 (or less) aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain: No

Identify flow route to TNW[5]: Stream 5, a seasonal RPW, flows into Stream 9, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☑ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width: 3 feet
Average depth: <0.01 feet
Average side slopes: 2:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [x] Cobbles
- [x] Gravel
- [ ] Muck
- [ ] Bedrock
- [ ] Vegetation. Type/% cover: 5T
- [ ] Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: The stream appeared to be stable and not eroding beyond what would expect to occur naturally.
Presence of run/riffle/pool complexes. Explain: No run/riffle/pool complexes were observed.
Tributary geometry: Relatively Straight
Tributary gradient (approximate average slope): 2%

(c) Flow:
Tributary provides for: Seasonal Flow
Estimate average number of flow events in review area/year: 20 (or greater)
Describe flow regime: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.
Other information on duration and volume: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

Surface flow is: Discrete and Confined Characteristics: There was a defined bed and bank,

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

Tributary has (check all that apply):

- [x] Bed and banks
- [x] OHWM[6] (check all indicators that apply):
  - [x] clear, natural line impressed on the bank
  - [ ] the presence of litter and debris
  - [ ] changes in the character of soil
  - [x] destruction of terrestrial vegetation
  - [ ] shelving
  - [ ] the presence of wrack line
  - [ ] vegetation matted down, bent, or absent
  - [ ] sediment sorting
  - [ ] leaf litter disturbed or washed away
  - [ ] scour
  - [ ] sediment deposition
  - [ ] multiple observed or predicted flow events
  - [ ] water staining
  - [ ] abrupt change in plant community 5T
  - [ ] other (list): 5T
- [ ] Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- [ ] High Tide Line indicated by:
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other (list): 5T
- [ ] Mean High Water Mark indicated by:
  - [ ] survey to available datum;
  - [ ] physical markings;
  - [ ] vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain: The stream originates from groundwater. The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground.
Identify specific pollutants, if known: It is not expected that any pollutants are affecting the stream.

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- [x] Riparian corridor. Characteristics (type, average width): > 100 feet of forested riparian buffer
- [ ] Wetland fringe. Characteristics: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:
Properties:
Wetland size: 5T acres
Wetland type. Explain: 5T
Wetland quality. Explain: 5T
Project wetlands cross or serve as state boundaries. Explain: 5T

(b) General Flow Relationship with Non-TNW:
Flow is: 5T Explain: 5T

Surface flow is: 5T
Characteristics: 5T

Subsurface flow: 5T Explain findings: 5T
- [ ] Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:
- [ ] Directly abutting
- [ ] Not directly abutting
  - [ ] Discrete wetland hydrologic connection. Explain: 5T
  - [ ] Ecological connection. Explain: 5T
  - [ ] Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW
Project wetlands are 5T river miles from TNW.
Project waters are 5T aerial (straight) miles from TNW.
Flow is from: 5T
Estimate approximate location of wetland as within the 5T floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: 5T
Identify specific pollutants, if known: 5T

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [ ] Riparian buffer. Characteristics (type, average width): 5T
- [ ] Vegetation type/percent cover. Explain: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 5T
Approximately (5T) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)
5T	5T	5T	5T
5T	5T	5T	5T
5T	5T	5T	5T
5T	5T	5T	5T

Summarize overall biological, chemical and physical functions being performed: 5T

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: The stream supplies clean groundwater to the downstream TNW. The stream also transfers nutrients and organic carbon to the downstream TNW. These affects provide a significant nexus with the downstream TNW.

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: 5T.
   - ☑ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high..

   Provide estimates for jurisdictional waters in the review area (check all that apply):
   - ☑ Tributary waters: 72.22 linear feet 3 width (ft).
   - ☐ Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   - ☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   - ☐ Tributary waters: 7T linear feet 7T width (ft).
   - ☐ Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   - ☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - ☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: 5T
     - ☐ Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: **7T**

   Provide acreage estimates for jurisdictional wetlands in the review area: 7T acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   - ☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: 5T acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   - ☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: 7T acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   - ☐ Demonstrate that impoundment was created from "waters of the U.S.," or
   - ☐ Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   - ☐ Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

- ☐ which are or could be used by interstate or foreign travelers for recreational or other purposes.
- ☐ from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
- ☐ which are or could be used for industrial purposes by industries in interstate commerce.
- ☐ Interstate isolated waters. Explain: 5T
- ☐ Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
- ☐ Tributary waters: 7T linear feet 7T width (ft).
- ☐ Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T
- ☐ Wetlands: 7T acres.

[8] See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.
- ☐ Data sheets prepared by the Corps: 7T
- ☐ Corps navigable waters' study: 7T
- ☐ U.S. Geological Survey Hydrologic Atlas: 7T
  - ☐ USGS NHD data.
  - ☐ USGS 8 and 12 digit HUC maps.
- ☑ U.S. Geological Survey map(s). Cite scale & quad name: 7.5 min Twinsburg and Aurora, Ohio Quad
- ☐ USDA Natural Resources Conservation Service Soil Survey. Citation: 7T
- ☐ National wetlands inventory map(s). Cite name: 7T
- ☐ State/Local wetland inventory map(s): 7T
- ☐ FEMA/FIRM maps: 7T
- ☐ 100-year Floodplain Elevation is: 7T (National Geodectic Vertical Datum of 1929)
- ☐ Photographs: ☐ Aerial (Name & Date): 7T
  - ☐ or ☐ Other (Name & Date): 7T
- ☐ Previous determination(s). File no. and date of response letter: 7T
- ☐ Applicable/supporting case law: 7T
- ☐ Applicable/supporting scientific literature: 7T
- ☐ Other information (please specify): 7T

B. ADDITIONAL COMMENTS TO SUPPORT JD: Stream 5, a seasonal RPW, flows into Stream 9, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.

7T

Date

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Stream 6, Form 4 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [x] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [ ] Non-RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [ ] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: 25.11 linear feet: 2 width (ft) and/or 5T acres.
   Wetlands: 5T acres.

   c. **Limits (boundaries) of jurisdiction** based on: Established by OHWM

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

- [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 7T

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: < 0.01 square miles
Drainage area: 625 square miles

Average annual rainfall: 47.28 inches
Average annual snowfall: 97.1 inches

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☑ Tributary flows through 3 tributaries before entering TNW.

Project waters are 5-10 river miles from TNW.
Project waters are 1 (or less) river miles from RPW.
Project waters are 5-10 aerial (straight) miles from TNW.
Project waters are 1 (or less) aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain: No

Identify flow route to TNW[5]: Stream 6, a seasonal RPW, flows into Stream 5, a seasonal RPW, which flows into Stream 9, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☑ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width: 3 feet
Average depth: <0.01 feet
Average side slopes: 2:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [x] Cobbles
- [x] Gravel
- [ ] Muck
- [ ] Bedrock
- [ ] Vegetation. Type/% cover: 5T
- [ ] Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: The stream appeared to be stable and not eroding beyond what would expect to occur naturally.
Presence of run/riffle/pool complexes. Explain: No run/riffle/pool complexes were observed.
Tributary geometry: Relatively Straight
Tributary gradient (approximate average slope): 2%

(c) Flow:
Tributary provides for: Seasonal Flow
Estimate average number of flow events in review area/year: 20 (or greater)
Describe flow regime: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.
Other information on duration and volume: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

Surface flow is: Discrete and Confined Characteristics: There was a defined bed and bank,

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

Tributary has (check all that apply):

- [x] Bed and banks
- [x] OHWM[6] (check all indicators that apply):
  - [x] clear, natural line impressed on the bank
  - [ ] changes in the character of soil
  - [ ] shelving
  - [ ] vegetation matted down, bent, or absent
  - [ ] leaf litter disturbed or washed away
  - [ ] sediment deposition
  - [ ] water staining
  - [ ] other (list): 5T
  - [ ] the presence of litter and debris
  - [x] destruction of terrestrial vegetation
  - [ ] the presence of wrack line
  - [ ] sediment sorting
  - [ ] scour
  - [ ] multiple observed or predicted flow events
  - [ ] abrupt change in plant community 5T
- [ ] Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- [ ] High Tide Line indicated by:
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other (list): 5T
- [ ] Mean High Water Mark indicated by:
  - [ ] survey to available datum;
  - [ ] physical markings;
  - [ ] vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain: The stream originates from groundwater. The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground.
Identify specific pollutants, if known: It is not expected that any pollutants are affecting the stream.

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- [x] Riparian corridor. Characteristics (type, average width): > 100 feet of forested riparian buffer
- [ ] Wetland fringe. Characteristics: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:
Properties:
Wetland size: 5T acres
Wetland type. Explain: 5T
Wetland quality. Explain: 5T
Project wetlands cross or serve as state boundaries. Explain: 5T

(b) General Flow Relationship with Non-TNW:
Flow is: 5T Explain: 5T

Surface flow is: 5T
Characteristics: 5T

Subsurface flow: 5T Explain findings: 5T
- [ ] Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:
- [ ] Directly abutting
- [ ] Not directly abutting
  - [ ] Discrete wetland hydrologic connection. Explain: 5T
  - [ ] Ecological connection. Explain: 5T
  - [ ] Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW
Project wetlands are 5T river miles from TNW.
Project waters are 5T aerial (straight) miles from TNW.
Flow is from: 5T
Estimate approximate location of wetland as within the 5T floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: 5T
Identify specific pollutants, if known: 5T

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [ ] Riparian buffer. Characteristics (type, average width): 5T
- [ ] Vegetation type/percent cover. Explain: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 5T
Approximately (5T) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)
5T	5T	5T	5T
5T	5T	5T	5T
5T	5T	5T	5T
5T	5T	5T	5T

Summarize overall biological, chemical and physical functions being performed: 5T

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: The stream supplies clean groundwater to the downstream TNW. The stream also transfers nutrients and organic carbon to the downstream TNW. These affects provide a significant nexus with the downstream TNW.

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: 5T.
   - ☑ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

   Provide estimates for jurisdictional waters in the review area (check all that apply):
   - ☑ Tributary waters: 25.11 linear feet 2 width (ft).
   - ☐ Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   ☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   ☐ Tributary waters: 7T linear feet 7T width (ft).
   ☐ Other non-wetland waters: 7T acres.
   Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   ☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
   ☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: 5T
   ☐ Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: **7T**

   Provide acreage estimates for jurisdictional wetlands in the review area: 7T acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   ☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: 5T acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   ☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: 7T acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   ☐ Demonstrate that impoundment was created from "waters of the U.S.," or
   ☐ Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   ☐ Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

☐ which are or could be used by interstate or foreign travelers for recreational or other purposes.
☐ from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
☐ which are or could be used for industrial purposes by industries in interstate commerce.
☐ Interstate isolated waters. Explain: 5T
☐ Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
☐ Tributary waters: 7T linear feet 7T width (ft).
☐ Other non-wetland waters: 7T acres.
Identify type(s) of waters: 7T
☐ Wetlands: 7T acres.

[8]See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.
- ☐ Data sheets prepared by the Corps: 7T
- ☐ Corps navigable waters' study: 7T
- ☐ U.S. Geological Survey Hydrologic Atlas: 7T
  - ☐ USGS NHD data.
  - ☐ USGS 8 and 12 digit HUC maps.
- ☑ U.S. Geological Survey map(s). Cite scale & quad name: 7.5 min Twinsburg and Aurora, Ohio Quad
- ☐ USDA Natural Resources Conservation Service Soil Survey. Citation: 7T
- ☐ National wetlands inventory map(s). Cite name: 7T
- ☐ State/Local wetland inventory map(s): 7T
- ☐ FEMA/FIRM maps: 7T
- ☐ 100-year Floodplain Elevation is: 7T (National Geodectic Vertical Datum of 1929)
- ☐ Photographs: ☐ Aerial (Name & Date): 7T
  - ☐ or ☐ Other (Name & Date): 7T
- ☐ Previous determination(s). File no. and date of response letter: 7T
- ☐ Applicable/supporting case law: 7T
- ☐ Applicable/supporting scientific literature: 7T
- ☐ Other information (please specify): 7T

B. ADDITIONAL COMMENTS TO SUPPORT JD: Stream 6, a seasonal RPW, flows into Stream 5, a seasonal RPW, which flows into Stream 9, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.

7T

Date

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Stream 7, Form 5 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [x] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [ ] Non-RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [ ] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: 35.22 linear feet: 2 width (ft) and/or 5T acres.
   Wetlands: 5T acres.

   c. **Limits (boundaries) of jurisdiction** based on: Established by OHWM

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

- [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 7T

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: < 0.01 square miles
Drainage area: 625 square miles

Average annual rainfall: 47.28 inches
Average annual snowfall: 97.1 inches

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☑ Tributary flows through 3 tributaries before entering TNW.

Project waters are 5-10 river miles from TNW.
Project waters are 1 (or less) river miles from RPW.
Project waters are 5-10 aerial (straight) miles from TNW.
Project waters are 1 (or less) aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain: No

Identify flow route to TNW[5]: Stream 7, a seasonal RPW, flows into Stream 5, a seasonal RPW, which flows into Stream 9, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☑ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width: 2 feet
Average depth: <0.01 feet
Average side slopes: 2:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [x] Cobbles
- [x] Gravel
- [ ] Muck
- [ ] Bedrock
- [ ] Vegetation. Type/% cover: 5T
- [ ] Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: The stream appeared to be stable and not eroding beyond what would expect to occur naturally.
Presence of run/riffle/pool complexes. Explain: No run/riffle/pool complexes were observed.
Tributary geometry: Relatively Straight
Tributary gradient (approximate average slope): 2%

(c) Flow:
Tributary provides for: Seasonal Flow
Estimate average number of flow events in review area/year: 20 (or greater)
Describe flow regime: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.
Other information on duration and volume: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

Surface flow is: Discrete and Confined Characteristics: There was a defined bed and bank,

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

Tributary has (check all that apply):

- [x] Bed and banks
- [x] OHWM[6] (check all indicators that apply):
  - [x] clear, natural line impressed on the bank
  - [ ] changes in the character of soil
  - [ ] shelving
  - [ ] vegetation matted down, bent, or absent
  - [ ] leaf litter disturbed or washed away
  - [ ] sediment deposition
  - [ ] water staining
  - [ ] other (list): 5T
  - [ ] the presence of litter and debris
  - [x] destruction of terrestrial vegetation
  - [ ] the presence of wrack line
  - [ ] sediment sorting
  - [ ] scour
  - [ ] multiple observed or predicted flow events
  - [ ] abrupt change in plant community 5T
- [ ] Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- [ ] High Tide Line indicated by:
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other (list): 5T
- [ ] Mean High Water Mark indicated by:
  - [ ] survey to available datum;
  - [ ] physical markings;
  - [ ] vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain: The stream originates from groundwater. The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground.
Identify specific pollutants, if known: It is not expected that any pollutants are affecting the stream.

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- [x] Riparian corridor. Characteristics (type, average width): > 100 feet of forested riparian buffer
- [ ] Wetland fringe. Characteristics: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:
Properties:
Wetland size: 5T acres
Wetland type. Explain: 5T
Wetland quality. Explain: 5T
Project wetlands cross or serve as state boundaries. Explain: 5T

(b) General Flow Relationship with Non-TNW:
Flow is: 5T Explain: 5T

Surface flow is: 5T
Characteristics: 5T

Subsurface flow: 5T Explain findings: 5T
- [ ] Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:
- [ ] Directly abutting
- [ ] Not directly abutting
  - [ ] Discrete wetland hydrologic connection. Explain: 5T
  - [ ] Ecological connection. Explain: 5T
  - [ ] Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW
Project wetlands are 5T river miles from TNW.
Project waters are 5T aerial (straight) miles from TNW.
Flow is from: 5T
Estimate approximate location of wetland as within the 5T floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: 5T
Identify specific pollutants, if known: 5T

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [ ] Riparian buffer. Characteristics (type, average width): 5T
- [ ] Vegetation type/percent cover. Explain: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 5T
Approximately (5T) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)
5T	5T	5T	5T
5T	5T	5T	5T
5T	5T	5T	5T
5T	5T	5T	5T

Summarize overall biological, chemical and physical functions being performed: 5T

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: The stream supplies clean groundwater to the downstream TNW. The stream also transfers nutrients and organic carbon to the downstream TNW. These affects provide a significant nexus with the downstream TNW.

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: 5T.
   - ☑ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

   Provide estimates for jurisdictional waters in the review area (check all that apply):
   - ☑ Tributary waters: 35.22 linear feet 2 width (ft).
   - ☐ Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   ☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   ☐ Tributary waters: 7T linear feet 7T width (ft).
   ☐ Other non-wetland waters: 7T acres.
   Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   ☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
   ☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: 5T
   ☐ Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: **7T**

   Provide acreage estimates for jurisdictional wetlands in the review area: 7T acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   ☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: 5T acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   ☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: 7T acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   ☐ Demonstrate that impoundment was created from "waters of the U.S.," or
   ☐ Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   ☐ Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

☐ which are or could be used by interstate or foreign travelers for recreational or other purposes.
☐ from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
☐ which are or could be used for industrial purposes by industries in interstate commerce.
☐ Interstate isolated waters. Explain: 5T
☐ Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
☐ Tributary waters: 7T linear feet 7T width (ft).
☐ Other non-wetland waters: 7T acres.
Identify type(s) of waters: 7T
☐ Wetlands: 7T acres.

[8]See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.
- ☐ Data sheets prepared by the Corps: 7T
- ☐ Corps navigable waters' study: 7T
- ☐ U.S. Geological Survey Hydrologic Atlas: 7T
  - ☐ USGS NHD data.
  - ☐ USGS 8 and 12 digit HUC maps.
- ☑ U.S. Geological Survey map(s). Cite scale & quad name: 7.5 min Twinsburg and Aurora, Ohio Quad
- ☐ USDA Natural Resources Conservation Service Soil Survey. Citation: 7T
- ☐ National wetlands inventory map(s). Cite name: 7T
- ☐ State/Local wetland inventory map(s): 7T
- ☐ FEMA/FIRM maps: 7T
- ☐ 100-year Floodplain Elevation is: 7T (National Geodectic Vertical Datum of 1929)
- ☐ Photographs: ☐ Aerial (Name & Date): 7T
  - ☐ or ☐ Other (Name & Date): 7T
- ☐ Previous determination(s). File no. and date of response letter: 7T
- ☐ Applicable/supporting case law: 7T
- ☐ Applicable/supporting scientific literature: 7T
- ☐ Other information (please specify): 7T

B. ADDITIONAL COMMENTS TO SUPPORT JD: Stream 7, a seasonal RPW, flows into Stream 5, a seasonal RPW, which flows into Stream 9, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.

7T

Date

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Stream 9 and Wetlands S-AA, S-BB, S-OO, S-MM, S-LL, S-PP, and S-QQ, and open water S-BB, Form 6 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [x] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [ ] Non-RPWs that flow directly or indirectly into TNWs
- [x] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [x] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [x] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: 1,066.46 linear feet: 7 width (ft) and/or 0.51acres.
   Wetlands: 2.41 acres.

   c. **Limits (boundaries) of jurisdiction** based on: 1987 Delineation Manual

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

- [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 7T

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: 5T
Drainage area: 5T

Average annual rainfall:
Average annual snowfall: 9

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☐ Tributary flows through 5T tributaries before entering TNW.

Project waters are 5T river miles from TNW.
Project waters are 5T river miles from RPW.
Project waters are 5T aerial (straight) miles from TNW.
Project waters are 5T aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW[5]:
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☐ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width:
Average depth:
Average side slopes: 5T

Primary tributary substrate composition (check all that apply):

- ☐ Silts
- ☐ Sands
- ☐ Concrete
- ☐ Cobbles
- ☐ Gravel
- ☐ Muck
- ☐ Bedrock
- ☐ Vegetation. Type/% cover: 5T
- ☐ Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain:
Presence of run/riffle/pool complexes. Explain:
Tributary geometry: 5T
Tributary gradient (approximate average slope): %

(c) Flow:
Tributary provides for: 5T
Estimate average number of flow events in review area/year: 5T
Describe flow regime:
Other information on duration and volume:

Surface flow is: 5T Characteristics:

Subsurface flow: Unknown Explain findings: 5T
- ☐ Dye (or other) test performed: 5T

Tributary has (check all that apply):
- ☐ Bed and banks
- ☐ OHWM[6] (check all indicators that apply):
  - ☐ clear, natural line impressed on the bank
  - ☐ changes in the character of soil
  - ☐ shelving
  - ☐ vegetation matted down, bent, or absent
  - ☐ leaf litter disturbed or washed away
  - ☐ sediment deposition
  - ☐ water staining
  - ☐ other (list): 5T
  - ☐ the presence of litter and debris
  - ☐ destruction of terrestrial vegetation
  - ☐ the presence of wrack line
  - ☐ sediment sorting
  - ☐ scour
  - ☐ multiple observed or predicted flow events
  - ☐ abrupt change in plant community 5T
- ☐ Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):
- ☐ High Tide Line indicated by:
  - ☐ oil or scum line along shore objects
  - ☐ fine shell or debris deposits (foreshore)
  - ☐ physical markings/characteristics
  - ☐ tidal gauges
  - ☐ other (list): 5T
- ☐ Mean High Water Mark indicated by:
  - ☐ survey to available datum;
  - ☐ physical markings;
  - ☐ vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain:
Identify specific pollutants, if known:

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- ☐ Riparian corridor. Characteristics (type, average width):
- ☐ Wetland fringe. Characteristics: 5T
- ☐ Habitat for:
  - ☐ Federally Listed species. Explain findings: 5T
  - ☐ Fish/spawn areas. Explain findings: 5T
  - ☐ Other environmentally-sensitive species. Explain findings: 5T
  - ☐ Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:

Properties:

Wetland size: 9.0 acres

Wetland type. Explain: Emergent and Forested

Wetland quality. Explain: The wetlands appeared to be medium to high quality wetlands.

Project wetlands cross or serve as state boundaries. Explain: No.

(b) General Flow Relationship with Non-TNW:

Flow is: Intermittent Flow Explain: Water was observed flowing within the wetlands. The wetlands intercept groundwater during periods of higher groundwater.

Surface flow is: Overland Sheetflow

Characteristics: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.

Subsurface flow: Unknown Explain findings: 5T

- ☐ Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:

- ☑ Directly abutting
- ☑ Not directly abutting
  - ☑ Discrete wetland hydrologic connection. Explain: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.
  - ☐ Ecological connection. Explain: 5T
  - ☐ Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW

Project wetlands are 5-10 river miles from TNW.

Project waters are 5-10 aerial (straight) miles from TNW.

Flow is from: Wetland to Navigable Waters

Estimate approximate location of wetland as within the 500-year or greater floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground. In addition, there is commercial development located within the wetlands' watersheds.

Identify specific pollutants, if known: Pollutants typically associated with commercial developments.

(iii) Biological Characteristics. Wetland supports (check all that apply):

- ☑ Riparian buffer. Characteristics (type, average width): < 100 feet forested buffer
- ☐ Vegetation type/percent cover. Explain: 5T
- ☐ Habitat for:
  - ☐ Federally Listed species. Explain findings: 5T
  - ☐ Fish/spawn areas. Explain findings: 5T
  - ☐ Other environmentally-sensitive species. Explain findings: 5T
  - ☐ Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 7

Approximately (2.41) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)	
Wetland S-AA (Y)	1.69	Wetland S-PP (Y)	0.24	
Wetland S-BB (Y)	0.04	Wetland S-QQ (Y)	0.02	
Wetland S-MM (Y)	0.06	Wetland S-OO (N)	0.07 5T	5T
Wetland S-LL (Y)	0.29			

Summarize overall biological, chemical and physical functions being performed: The wetlands store precipitation and stormwater runoff, filter pollutants, and settle sediment.

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D:

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: According to the Ohio Environmental Protection Agency's *Biological and Water Quality Study of the Aurora Branch Chagrin River 2012*, several nearby sampling locations did not meet aquatic life attainment status as a result of the following impairments: sedimentation/siltation and nutrient/eutrophication. These same causes of impairment are also evident in the Chagrin River itself. The on-site wetlands provide clean/cool water to the downstream TNW. Therefore, the wetlands help to reduce/ not contribute to additional impairments within the downstream TNW. (http://epa.ohio.gov/Portals/35/documents/Aurora_Branch_TSD.pdf)

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☑ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: Stream 9 is identified as perennial on the USGS Quad.
   - ☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

   Provide estimates for jurisdictional waters in the review area (check all that apply):
   - ☑ Tributary waters: 1,066.46 linear feet 7 width (ft).
   - ☐ Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   - [ ] Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   - [ ] Tributary waters: linear feet width (ft).
   - [ ] Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   - [x] Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - [x] Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: There was no upland observed between Stream 4 and Wetlands S-A, S-B, and S-CC.
     - [ ] Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:

   Provide acreage estimates for jurisdictional wetlands in the review area: 2.34 acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   - [x] Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: 0.07 acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   - [ ] Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   - [x] Demonstrate that impoundment was created from "waters of the U.S.," or
   - [ ] Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   - [ ] Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

- [ ] which are or could be used by interstate or foreign travelers for recreational or other purposes.
- [ ] from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
- [ ] which are or could be used for industrial purposes by industries in interstate commerce.
- [ ] Interstate isolated waters. Explain: 5T
- [ ] Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
- [ ] Tributary waters: 7T linear feet 7T width (ft).
- [ ] Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T
- [ ] Wetlands: 7T acres.

[8] See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.
- ☐ Data sheets prepared by the Corps: 7T
- ☐ Corps navigable waters' study: 7T
- ☐ U.S. Geological Survey Hydrologic Atlas: 7T
  - ☐ USGS NHD data.
  - ☐ USGS 8 and 12 digit HUC maps.
- ☑ U.S. Geological Survey map(s). Cite scale & quad name: 7.5 min Twinsburg and Aurora, Ohio Quad
- ☐ USDA Natural Resources Conservation Service Soil Survey. Citation: 7T
- ☐ National wetlands inventory map(s). Cite name: 7T
- ☐ State/Local wetland inventory map(s): 7T
- ☐ FEMA/FIRM maps: 7T
- ☐ 100-year Floodplain Elevation is: 7T (National Geodectic Vertical Datum of 1929)
- ☐ Photographs: ☐ Aerial (Name & Date): 7T
  - ☐ or ☐ Other (Name & Date): 7T
- ☐ Previous determination(s). File no. and date of response letter: 7T
- ☐ Applicable/supporting case law: 7T
- ☐ Applicable/supporting scientific literature: 7T
- ☐ Other information (please specify): 7T

B. ADDITIONAL COMMENTS TO SUPPORT JD: Stream 9, an RPW, flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.

Open water S-BB is an impoundment of the stream. Water flows into the impoundment, is dammed up, and then continues to flow past the impoundment.

7T

Date

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Stream 10 and Wetland S-KK, Form 7 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [x] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [ ] Non-RPWs that flow directly or indirectly into TNWs
- [x] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [ ] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: 569.38 linear feet: 3 width (ft) and/or 5T acres.
   Wetlands: 0.11 acres.

   c. **Limits (boundaries) of jurisdiction** based on: 1987 Delineation Manual

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

- [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 7T

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: < 0.01 square miles
Drainage area: 625 square miles

Average annual rainfall: 47.28 inches
Average annual snowfall: 97.1 inches

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☑ Tributary flows through 2 tributaries before entering TNW.

Project waters are 5-10 river miles from TNW.
Project waters are 1 (or less) river miles from RPW.
Project waters are 5-10 aerial (straight) miles from TNW.
Project waters are 1 (or less) aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain: No

Identify flow route to TNW[5]: Stream 10, a seasonal RPW, flows into Stream 9, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☑ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width: 3 feet
Average depth: <0.01 feet
Average side slopes: 2:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [x] Cobbles
- [x] Gravel
- [ ] Muck
- [ ] Bedrock
- [ ] Vegetation. Type/% cover: 5T
- [ ] Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: The stream appeared to be stable and not eroding beyond what would expect to occur naturally.
Presence of run/riffle/pool complexes. Explain: No run/riffle/pool complexes were observed.
Tributary geometry: Relatively Straight
Tributary gradient (approximate average slope): 2%

(c) Flow:
Tributary provides for: Seasonal Flow
Estimate average number of flow events in review area/year: 20 (or greater)
Describe flow regime: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.
Other information on duration and volume: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

Surface flow is: Discrete and Confined Characteristics: There was a defined bed and bank,

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

Tributary has (check all that apply):

- [x] Bed and banks
- [x] OHWM[6] (check all indicators that apply):
  - [x] clear, natural line impressed on the bank
  - [ ] changes in the character of soil
  - [ ] shelving
  - [ ] vegetation matted down, bent, or absent
  - [ ] leaf litter disturbed or washed away
  - [ ] sediment deposition
  - [ ] water staining
  - [ ] other (list): 5T
  - [ ] the presence of litter and debris
  - [x] destruction of terrestrial vegetation
  - [ ] the presence of wrack line
  - [ ] sediment sorting
  - [ ] scour
  - [ ] multiple observed or predicted flow events
  - [ ] abrupt change in plant community 5T
- [ ] Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- [ ] High Tide Line indicated by:
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other (list): 5T
- [ ] Mean High Water Mark indicated by:
  - [ ] survey to available datum;
  - [ ] physical markings;
  - [ ] vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain: The stream originates from groundwater. The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground.
Identify specific pollutants, if known: It is not expected that any pollutants are affecting the stream.

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- [x] Riparian corridor. Characteristics (type, average width): > 100 feet of forested riparian buffer
- [ ] Wetland fringe. Characteristics: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:

Properties:

Wetland size: 0.11 acres

Wetland type. Explain: Emergent

Wetland quality. Explain: The wetlands appeared to be low to medium quality wetlands.

Project wetlands cross or serve as state boundaries. Explain: No.

(b) General Flow Relationship with Non-TNW:

Flow is: Intermittent Flow Explain: Water was observed flowing within the wetlands. The wetlands intercept groundwater during periods of higher groundwater.

Surface flow is: Overland Sheetflow

Characteristics: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:

- [x] Directly abutting
- [x] Not directly abutting
  - [x] Discrete wetland hydrologic connection. Explain: Evidence of overland sheetflow was observed during the field visit. Leaf litter was displaced and overland channels were observed.
  - [ ] Ecological connection. Explain: 5T
  - [ ] Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW

Project wetlands are 5-10 river miles from TNW.

Project waters are 5-10 aerial (straight) miles from TNW.

Flow is from: Wetland to Navigable Waters

Estimate approximate location of wetland as within the 500-year or greater floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground. In addition, there are low density single family residential homes located within the wetlands' watersheds.

Identify specific pollutants, if known: Pollutants typically associated with residential subdivisions.

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [x] Riparian buffer. Characteristics (type, average width): < 100 feet forested buffer
- [ ] Vegetation type/percent cover. Explain: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 1

Approximately (0.11) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)
Wetland S-KK (Y)	0.11	5T	5T
	5T	5T	
	5T	5T	
5T	5T	5T	5T

Summarize overall biological, chemical and physical functions being performed: The wetlands store precipitation and stormwater runoff, filter pollutants, and settle sediment.

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: The stream supplies clean groundwater to the downstream TNW. The stream also transfers nutrients and organic carbon to the downstream TNW. These affects provide a significant nexus with the downstream TNW.

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: According to the Ohio Environmental Protection Agency's *Biological and Water Quality Study of the Aurora Branch Chagrin River 2012*, several nearby sampling locations did not meet aquatic life attainment status as a result of the following impairments: sedimentation/siltation and nutrient/eutrophication. These same causes of impairment are also evident in the Chagrin River itself. The on-site wetlands provide clean/cool water to the downstream TNW. Therefore, the wetlands help to reduce/ not contribute to additional impairments within the downstream TNW. (http://epa.ohio.gov/Portals/35/documents/Aurora_Branch_TSD.pdf)

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: 5T.
   - ☑ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

   Provide estimates for jurisdictional waters in the review area (check all that apply):

- [x] Tributary waters: 60.61 linear feet 3 width (ft).
- [ ] Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   - ☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   - ☐ Tributary waters: 7T linear feet 7T width (ft).
   - ☐ Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   - ☑ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - ☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: 5T
     - ☑ Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: **There was no upland observed between Stream 10 and Wetland S-KK.**

   Provide acreage estimates for jurisdictional wetlands in the review area: 0.11 acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   - ☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   - ☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: 7T acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   - ☐ Demonstrate that impoundment was created from "waters of the U.S.," or
   - ☐ Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   - ☐ Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

- ☐ which are or could be used by interstate or foreign travelers for recreational or other purposes.
- ☐ from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
- ☐ which are or could be used for industrial purposes by industries in interstate commerce.
- ☐ Interstate isolated waters. Explain: 5T
- ☐ Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
- ☐ Tributary waters: 7T linear feet 7T width (ft).
- ☐ Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T
- ☐ Wetlands: 7T acres.

[8] See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.
- ☐ Data sheets prepared by the Corps: 7T
- ☐ Corps navigable waters' study: 7T
- ☐ U.S. Geological Survey Hydrologic Atlas: 7T
  - ☐ USGS NHD data.
  - ☐ USGS 8 and 12 digit HUC maps.
- ☑ U.S. Geological Survey map(s). Cite scale & quad name: 7.5 min Twinsburg and Aurora, Ohio Quad
- ☐ USDA Natural Resources Conservation Service Soil Survey. Citation: 7T
- ☐ National wetlands inventory map(s). Cite name: 7T
- ☐ State/Local wetland inventory map(s): 7T
- ☐ FEMA/FIRM maps: 7T
- ☐ 100-year Floodplain Elevation is: 7T (National Geodectic Vertical Datum of 1929)
- ☐ Photographs: ☐ Aerial (Name & Date): 7T
  - ☐ or ☐ Other (Name & Date): 7T
- ☐ Previous determination(s). File no. and date of response letter: 7T
- ☐ Applicable/supporting case law: 7T
- ☐ Applicable/supporting scientific literature: 7T
- ☐ Other information (please specify): 7T

B. ADDITIONAL COMMENTS TO SUPPORT JD: Stream 10, a seasonal RPW, flows into Stream 9, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.

7T

Date

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Stream 11, Form 8 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [x] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [ ] Non-RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [ ] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: 269.50 linear feet: 3 width (ft) and/or 5T acres.
   Wetlands: 5T acres.

   c. **Limits (boundaries) of jurisdiction** based on: Established by OHWM

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

- [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 7T

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: < 0.01 square miles
Drainage area: 625 square miles

Average annual rainfall: 47.28 inches
Average annual snowfall: 97.1 inches

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☑ Tributary flows through 2 tributaries before entering TNW.

Project waters are 5-10 river miles from TNW.
Project waters are 1 (or less) river miles from RPW.
Project waters are 5-10 aerial (straight) miles from TNW.
Project waters are 1 (or less) aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain: No

Identify flow route to TNW[5]: Stream 11, a seasonal RPW, flows into Stream 13, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☑ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width: 3 feet
Average depth: <0.01 feet
Average side slopes: 2:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [x] Cobbles
- [x] Gravel
- [ ] Muck
- [ ] Bedrock
- [ ] Vegetation. Type/% cover: 5T
- [ ] Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: The stream appeared to be stable and not eroding beyond what would expect to occur naturally.
Presence of run/riffle/pool complexes. Explain: No run/riffle/pool complexes were observed.
Tributary geometry: Relatively Straight
Tributary gradient (approximate average slope): 2%

(c) Flow:
Tributary provides for: Seasonal Flow
Estimate average number of flow events in review area/year: 20 (or greater)
Describe flow regime: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.
Other information on duration and volume: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

Surface flow is: Discrete and Confined Characteristics: There was a defined bed and bank,

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

Tributary has (check all that apply):

- [x] Bed and banks
- [x] OHWM[6] (check all indicators that apply):
  - [x] clear, natural line impressed on the bank
  - [ ] changes in the character of soil
  - [ ] shelving
  - [ ] vegetation matted down, bent, or absent
  - [ ] leaf litter disturbed or washed away
  - [ ] sediment deposition
  - [ ] water staining
  - [ ] other (list): 5T
  - [ ] the presence of litter and debris
  - [x] destruction of terrestrial vegetation
  - [ ] the presence of wrack line
  - [ ] sediment sorting
  - [ ] scour
  - [ ] multiple observed or predicted flow events
  - [ ] abrupt change in plant community 5T
- [ ] Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- [ ] High Tide Line indicated by:
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other (list): 5T
- [ ] Mean High Water Mark indicated by:
  - [ ] survey to available datum;
  - [ ] physical markings;
  - [ ] vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain: The stream originates from groundwater. The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground.
Identify specific pollutants, if known: It is not expected that any pollutants are affecting the stream.

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- [x] Riparian corridor. Characteristics (type, average width): > 100 feet of forested riparian buffer
- [ ] Wetland fringe. Characteristics: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:
Properties:
Wetland size: 5T acres
Wetland type. Explain: 5T
Wetland quality. Explain: 5T
Project wetlands cross or serve as state boundaries. Explain: 5T

(b) General Flow Relationship with Non-TNW:
Flow is: 5T Explain: 5T

Surface flow is: 5T
Characteristics: 5T

Subsurface flow: 5T Explain findings: 5T
- [ ] Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:
- [ ] Directly abutting
- [ ] Not directly abutting
  - [ ] Discrete wetland hydrologic connection. Explain: 5T
  - [ ] Ecological connection. Explain: 5T
  - [ ] Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW
Project wetlands are 5T river miles from TNW.
Project waters are 5T aerial (straight) miles from TNW.
Flow is from: 5T
Estimate approximate location of wetland as within the 5T floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: 5T
Identify specific pollutants, if known: 5T

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [ ] Riparian buffer. Characteristics (type, average width): 5T
- [ ] Vegetation type/percent cover. Explain: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 5T
Approximately (5T) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)
5T	5T	5T	5T
5T	5T	5T	5T
5T	5T	5T	5T
5T	5T	5T	5T

Summarize overall biological, chemical and physical functions being performed: 5T

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: The stream supplies clean groundwater to the downstream TNW. The stream also transfers nutrients and organic carbon to the downstream TNW. These affects provide a significant nexus with the downstream TNW.

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: 5T.
   - ☑ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

   Provide estimates for jurisdictional waters in the review area (check all that apply):
   - ☑ Tributary waters: 269.50 linear feet 3 width (ft).
   - ☐ Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   ☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   ☐ Tributary waters: 7T linear feet 7T width (ft).
   ☐ Other non-wetland waters: 7T acres.
   Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   ☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
   ☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: 5T
   ☐ Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: **7T**

   Provide acreage estimates for jurisdictional wetlands in the review area: 7T acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   ☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: 5T acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   ☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: 7T acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   ☐ Demonstrate that impoundment was created from "waters of the U.S.," or
   ☐ Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   ☐ Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

☐ which are or could be used by interstate or foreign travelers for recreational or other purposes.
☐ from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
☐ which are or could be used for industrial purposes by industries in interstate commerce.
☐ Interstate isolated waters. Explain: 5T
☐ Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
☐ Tributary waters: 7T linear feet 7T width (ft).
☐ Other non-wetland waters: 7T acres.
Identify type(s) of waters: 7T
☐ Wetlands: 7T acres.

[8]See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.

Date

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): December 22, 2014

B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Buffalo District, K. Hovnanian Homes – Geauga Lake, DA No. 2014-01272, Stream 12, Form 9 of 13

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Ohio County/parish/borough: Geauga and Portage City: Bainbridge Township and City of Aurora
Center coordinates of site (lat/long in degree decimal format): Lat. 41.34519 °, Long. -81.35913 °
Universal Transverse Mercator: 5T
Name of nearest waterbody: unnamed tributary to the Aurora Branch of the Chagrin River
Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Chagrin River
Name of watershed or Hydrologic Unit Code (HUC): Chagrin

- [x] Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- [ ] Check if other sites (e.g., offsite mitigation sites, disposal sites, etc…) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- [x] Office (Desk) Determination. Date: December 22, 2014
- [x] Field Determination. Date(s): December 3, 2014, 5T

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "*navigable waters of the U.S.*" within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [*Required*]

- [ ] Waters subject to the ebb and flow of the tide.
- [ ] Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: 5T

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "*waters of the U.S.*" within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. ***[Required]***

1. **Waters of the U.S.**
   a. **Indicate presence of waters of U.S. in review area (check all that apply):** [1]

- [ ] TNWs, including territorial seas
- [ ] Wetlands adjacent to TNWs
- [x] Relatively permanent waters[2] (RPWs) that flow directly or indirectly into TNWs
- [ ] Non-RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- [ ] Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- [ ] Impoundments of jurisdictional waters
- [ ] Isolated (interstate or intrastate) waters, including isolated wetlands

   b. **Identify (estimate) size of waters of the U.S. in the review area:**
   Non-wetland waters: 386.27 linear feet: 3 width (ft) and/or 5T acres.
   Wetlands: 5T acres.

   c. **Limits (boundaries) of jurisdiction** based on: Established by OHWM

   Elevation of established OHWM (if known): 5T

2. **Non-regulated waters/wetlands (check if applicable):**[3]

- [ ] Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 7T

[1] Boxes checked below shall be supported by completing the appropriate sections in Section III below.
[2] For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
[3] Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: 7T

Summarize rationale supporting determination: 5T

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": 5T

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody[4] is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: < 0.01 square miles
Drainage area: 625 square miles

Average annual rainfall: 47.28 inches
Average annual snowfall: 97.1 inches

(ii) Physical Characteristics:

(a) Relationship with TNW:

☐ Tributary flows directly into TNW.

☑ Tributary flows through 2 tributaries before entering TNW.

Project waters are 5-10 river miles from TNW.
Project waters are 1 (or less) river miles from RPW.
Project waters are 5-10 aerial (straight) miles from TNW.
Project waters are 1 (or less) aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain: No

Identify flow route to TNW[5]: Stream 12, a seasonal RPW, flows into Stream 13, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.
Tributary stream order, if known: 5T

(b) General Tributary Characteristics (check all that apply):

Tributary is: ☑ Natural

☐ Artificial (man-made). Explain: 5T

☐ Manipulated (man-altered). Explain: 5T

[4] Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.
[5] Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate):
Average width: 3 feet
Average depth: <0.01 feet
Average side slopes: 2:1

Primary tributary substrate composition (check all that apply):

- [x] Silts
- [ ] Sands
- [ ] Concrete
- [x] Cobbles
- [x] Gravel
- [ ] Muck
- [ ] Bedrock
- [ ] Vegetation. Type/% cover: 5T
- [ ] Other. Explain: 5T

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: The stream appeared to be stable and not eroding beyond what would expect to occur naturally.
Presence of run/riffle/pool complexes. Explain: No run/riffle/pool complexes were observed.
Tributary geometry: Relatively Straight
Tributary gradient (approximate average slope): 2%

(c) Flow:
Tributary provides for: Seasonal Flow
Estimate average number of flow events in review area/year: 20 (or greater)
Describe flow regime: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.
Other information on duration and volume: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

Surface flow is: Discrete and Confined Characteristics: There was a defined bed and bank,

Subsurface flow: Unknown Explain findings: 5T

- [ ] Dye (or other) test performed: 5T

Tributary has (check all that apply):

- [x] Bed and banks
- [x] OHWM[6] (check all indicators that apply):
  - [x] clear, natural line impressed on the bank
  - [ ] changes in the character of soil
  - [ ] shelving
  - [ ] vegetation matted down, bent, or absent
  - [ ] leaf litter disturbed or washed away
  - [ ] sediment deposition
  - [ ] water staining
  - [ ] other (list): 5T
  - [ ] the presence of litter and debris
  - [x] destruction of terrestrial vegetation
  - [ ] the presence of wrack line
  - [ ] sediment sorting
  - [ ] scour
  - [ ] multiple observed or predicted flow events
  - [ ] abrupt change in plant community 5T
- [ ] Discontinuous OHWM.[7] Explain: 5T

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- [ ] High Tide Line indicated by:
  - [ ] oil or scum line along shore objects
  - [ ] fine shell or debris deposits (foreshore)
  - [ ] physical markings/characteristics
  - [ ] tidal gauges
  - [ ] other (list): 5T
- [ ] Mean High Water Mark indicated by:
  - [ ] survey to available datum;
  - [ ] physical markings;
  - [ ] vegetation lines/changes in vegetation types.

(iii) Chemical Characteristics:
Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).
Explain: The stream originates from groundwater. The watershed is primarily forested. There is little development within the watershed. The watershed was historically used as a low impact campground.
Identify specific pollutants, if known: It is not expected that any pollutants are affecting the stream.

[6]A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.
[7]Ibid.

(iv) Biological Characteristics. Channel supports (check all that apply):

- [x] Riparian corridor. Characteristics (type, average width): > 100 feet of forested riparian buffer
- [ ] Wetland fringe. Characteristics: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

(a) General Wetland Characteristics:
Properties:
Wetland size: 5T acres
Wetland type. Explain: 5T
Wetland quality. Explain: 5T
Project wetlands cross or serve as state boundaries. Explain: 5T

(b) General Flow Relationship with Non-TNW:
Flow is: 5T Explain: 5T

Surface flow is: 5T
Characteristics: 5T

Subsurface flow: 5T Explain findings: 5T
- [ ] Dye (or other) test performed: 5T

(c) Wetland Adjacency Determination with Non-TNW:
- [ ] Directly abutting
- [ ] Not directly abutting
  - [ ] Discrete wetland hydrologic connection. Explain: 5T
  - [ ] Ecological connection. Explain: 5T
  - [ ] Separated by berm/barrier. Explain: 5T

(d) Proximity (Relationship) to TNW
Project wetlands are 5T river miles from TNW.
Project waters are 5T aerial (straight) miles from TNW.
Flow is from: 5T
Estimate approximate location of wetland as within the 5T floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: 5T
Identify specific pollutants, if known: 5T

(iii) Biological Characteristics. Wetland supports (check all that apply):

- [ ] Riparian buffer. Characteristics (type, average width): 5T
- [ ] Vegetation type/percent cover. Explain: 5T
- [ ] Habitat for:
  - [ ] Federally Listed species. Explain findings: 5T
  - [ ] Fish/spawn areas. Explain findings: 5T
  - [ ] Other environmentally-sensitive species. Explain findings: 5T
  - [ ] Aquatic/wildlife diversity. Explain findings: 5T

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 5T
Approximately (5T) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)
5T	5T	5T	5T
5T	5T	5T	5T
5T	5T	5T	5T
5T	5T	5T	5T

Summarize overall biological, chemical and physical functions being performed: 5T

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: The stream supplies clean groundwater to the downstream TNW. The stream also transfers nutrients and organic carbon to the downstream TNW. These affects provide a significant nexus with the downstream TNW.

2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: 5T

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
   - ☐ TNWs: 5T linear feet 5T width (ft), Or, 5T acres.
   - ☐ Wetlands adjacent to TNWs: 5T acres.

2. **RPWs that flow directly or indirectly into TNWs.**
   - ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: 5T.
   - ☑ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: Water was flowing during the site visit. The stream originates from groundwater. The stream intercepts groundwater during periods of the year when groundwater is high.

   Provide estimates for jurisdictional waters in the review area (check all that apply):
   - ☑ Tributary waters: 386.27 linear feet 3 width (ft).
   - ☐ Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

3. **Non-RPWs[8] that flow directly or indirectly into TNWs.**
   - ☐ Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional waters within the review area (check all that apply):
   - ☐ Tributary waters: 7T linear feet 7T width (ft).
   - ☐ Other non-wetland waters: 7T acres.
     Identify type(s) of waters: 7T

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**
   - ☐ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
     - ☐ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: 5T
     - ☐ Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: **7T**

   Provide acreage estimates for jurisdictional wetlands in the review area: 7T acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**
   - ☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

   Provide acreage estimates for jurisdictional wetlands in the review area: 5T acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**
   - ☐ Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

   Provide estimates for jurisdictional wetlands in the review area: 7T acres.

7. **Impoundments of jurisdictional waters.[9]**
   As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
   - ☐ Demonstrate that impoundment was created from "waters of the U.S.," or
   - ☐ Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
   - ☐ Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):[10]

- ☐ which are or could be used by interstate or foreign travelers for recreational or other purposes.
- ☐ from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
- ☐ which are or could be used for industrial purposes by industries in interstate commerce.
- ☐ Interstate isolated waters. Explain: 5T
- ☐ Other factors. Explain: 5T

Identify water body and summarize rationale supporting determination: 5T

Provide estimates for jurisdictional waters in the review area (check all that apply):
- ☐ Tributary waters: 7T linear feet 7T width (ft).
- ☐ Other non-wetland waters: 7T acres.
  Identify type(s) of waters: 7T
- ☐ Wetlands: 7T acres.

[8] See Footnote # 3.
[9] To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
[10] Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos.*

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- ☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- ☐ Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - ☐ Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- ☐ Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: 7T
- ☐ Other: (explain, if not covered above): 7T

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- ☐ Non-wetland waters (i.e., rivers, streams): 7T linear feet 7T width (ft).
- ☐ Lakes/ponds: 7T acres.
- ☐ Other non-wetland waters: 7T acres. List type of aquatic resource: 7T.
- ☐ Wetlands: 7T acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- ☑ Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Atwell
- ☑ Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - ☑ Office concurs with data sheets/delineation report.
  - ☐ Office does not concur with data sheets/delineation report.
- ☐ Data sheets prepared by the Corps: 7T
- ☐ Corps navigable waters' study: 7T
- ☐ U.S. Geological Survey Hydrologic Atlas: 7T
  - ☐ USGS NHD data.
  - ☐ USGS 8 and 12 digit HUC maps.
- ☑ U.S. Geological Survey map(s). Cite scale & quad name: 7.5 min Twinsburg and Aurora, Ohio Quad
- ☐ USDA Natural Resources Conservation Service Soil Survey. Citation: 7T
- ☐ National wetlands inventory map(s). Cite name: 7T
- ☐ State/Local wetland inventory map(s): 7T
- ☐ FEMA/FIRM maps: 7T
- ☐ 100-year Floodplain Elevation is: 7T (National Geodectic Vertical Datum of 1929)
- ☐ Photographs: ☐ Aerial (Name & Date): 7T
  or ☐ Other (Name & Date): 7T
- ☐ Previous determination(s). File no. and date of response letter: 7T
- ☐ Applicable/supporting case law: 7T
- ☐ Applicable/supporting scientific literature: 7T
- ☐ Other information (please specify): 7T

B. ADDITIONAL COMMENTS TO SUPPORT JD: Stream 12, a seasonal RPW, flows into Stream 13, an RPW, which flows into the Aurora Branch of the Chagrin River, an RPW, which flows into the Chagrin River, a TNW.
