SUBJECT: Risk Assessment for RI - Lake Ontario Ordnance Works.

SUMMARY

Myself & Jeff Adkins discussed the risk assessment with Ken to determine the best way to finalize the document. It was decided that the most appropriate course of action would be to complete a qualitative risk assessment for the areas studied so far. This type of assessment would be supplemented with air monitoring data obtained from Chemical Waste Management for the entire site. Also, the results of surface soil sampling during supplemental field investigations, will be considered for use during the feasibility phase of the project.

Ken also indicated that Yavuz Erk, NYDEC, recommended that we narrow down the indicator parameters in our future work, and referenced the Dupont plan for Management for Soils and Groundwater Resulting from Excavation Work.
