SUBJECT

Lake Ontario Ordnance Works RI/FS

SUMMARY

Kathy Older and myself contacted Ken to discuss to items relating to the drilling operation at Lake Ontario. ① Kathy indicated that the SOW requires the use of stainless steel sampling equipment. This would include stainless steel split spoons. The reason for requiring this is that chemicals from soil samples could react with the regular iron spoons. Also if a spoon becomes even slightly pitted, it will be difficult to decontaminate. ② Kathy next discussed drilling lubricants. Mineral oil is not acceptable as a lubricant because it contains petroleum hydrocarbons. Silicone based lubricants or Crisco are acceptable. However Crisco can't be used on RCRA sites because RCRA looks for TOC. The Corps uses fluorosilicon grease, which is made by DOW
