# Euclid Creek, Cleveland, OH

## Great Lakes Fishery & Ecosystem Restoration

### Habitat Focus Area

**Project Location:** The project is located along Euclid Creek in Cleveland, OH, in the Cuyahoga River Area of Concern (AOC).

**Project Description:** The Euclid Creek Spillway is the last structure remaining in the lower Euclid Creek contributing to the loss of Fish and Wildlife Habitat Beneficial Use Impairment (BUI) in the Cuyahoga River AOC Remedial Action Plan (RAP). Habitat restoration of the Euclid Creek Spillway was identified in the Euclid Creek Watershed Action Plan endorsed by the Ohio Department of Natural Resources (ODNR) in 2006. Restoration measures for this project could include hydrological stabilization, in-stream and streambank habitat, and riparian corridor restoration which would result in diverse fish migration, fish spawning, rearing and refuge habitats for species including Smallmouth Bass, Largemouth Bass, Central Stoneroller, and Emerald Shiner.

**Non-Federal Partner:** Northeast Ohio Regional Sewer District

**Project Benefits:** Benefits include access to 18 river mile of previously inaccessible stream to native fish, enhanced estuary habitat at Lake Erie, 1,000 linear feet of streambank stabilization, invasive species removal and native riparian vegetation restoration. This project also directly supports the removal of a BUI in the Cuyahoga Area of Concern and is considered a Management Activity necessary for delisting.

**Project Status:** Negotiation of Feasibility Cost Share Agreement.

<b>Estimated Project Costs</b>	
Federal	\$975,000
Non-Federal	\$525,000
<b>Total</b>	<b>\$1,500,000</b>

<b>Project Milestones</b>	
Complete DFI	MAR 2013
Sign FCSA	JAN 2014
Complete Draft Feasibility Study	JUL 2015
