

DEPARTMENT OF THE ARMY
CORPS OF ENGINEERS, BUFFALO DISTRICT
1776 NIAGARA STREET
BUFFALO, NEW YORK 14207-3199

July 6, 2021

The Honorable Chris Jacobs
United States House of Representatives
2243 Rayburn House Office Building
Washington, D.C. 20515

Dear Representative Jacobs:

The U.S. Army Corps of Engineers is pleased to announce the public release of two documents: the *Proposed Plan for the Former Guterl Specialty Steel Corporation Site* and the *Feasibility Study Report, Former Guterl Specialty Steel Corporation*. These documents and a fact sheet are available at <https://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/Guterl-Steel-Site/> in the Reports section and the Fact Sheet section respectively.

The Guterl Site, located in Lockport, New York, is being addressed under the authority of the Formerly Utilized Sites Remedial Action Program (FUSRAP). The Corps of Engineers is the lead federal agency for the program, which is conducted in accordance with the governing federal law – the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP).

The proposed plan is available for public review and comment from July 12, 2021, to September 10, 2021. It identifies the Corps of Engineers' preferred alternative to address contaminated buildings, soil, and groundwater at the Guterl Site: Site-Wide Alternative 3. The alternative includes: dismantlement and off-site disposal of buildings that were involved in Atomic Energy Commission activities during the 1940s and 1950s; complete soil removal to the soil preliminary remediation goal for groundwater protection and off-site disposal; and uranium groundwater plume recovery using extraction wells and an *in situ* rubblelized trench with *ex situ* treatment, and environmental monitoring of groundwater plume attenuation (enhanced and natural). Site-Wide Alternative 3 complies with the identified regulations and provides the best balance among the five NCP balancing criteria (i.e., long-term effectiveness and permanence; reduction of toxicity, mobility, and volume through treatment; short-term effectiveness; implementability; and cost).

The feasibility study is a supporting document to the proposed plan. The report identifies, develops and evaluates remedial alternatives to address FUSRAP-related constituents of concern (thorium-232 and uranium in soil and buildings, and uranium in groundwater) at the site.

You are invited to attend a virtual public meeting on Thursday, July 29, 2021, at 7 p.m. to provide comments on the proposed plan. Space is limited, so please email fusrap@usace.army.mil by Wednesday, July 28, 2021, at 4 p.m. to register for the meeting, and to let us know if you will be providing comments. The public meeting presentation is available on the website in the Public Presentations section. The virtual public meeting will be recorded so that oral comments received can be captured.

You are encouraged to email your comments to fusrap@usace.army.mil by September 10, 2021. Written comments may be mailed to the U.S. Army Corps of Engineers, Buffalo District, Attention: Environmental Project Management Section, 1776 Niagara Street, Buffalo, New York 14207, by the close of the comment period.

The preferred alternative may be modified based on any new information acquired during the designated public comment period. Responses to comments received will be provided in the record of decision, which will identify the selected remedy to be implemented.

The administrative record file for the Guterl Site, which contains the documents supporting the proposed plan, is available on the project website.

A copy of this letter is being provided to your Williamsville office. If you have any questions please contact Ms. Natalie Watson, Guterl Specialty Steel Site Project Manager, by telephone at (716) 879-4422.

Sincerely,

A handwritten signature in black ink that reads "Eli S. Adams". The signature is fluid and cursive, with the first letters of the first and last names being capitalized and prominent.

These documents and a fact sheet are available at <https://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/Guterl-Steel-Site/> in the Reports section and the Fact Sheet section respectively.

The Guterl Site, located in Lockport, New York, is being addressed under the authority of the Formerly Utilized Sites Remedial Action Program (FUSRAP). The Corps of Engineers is the lead federal agency for the program, which is conducted in accordance with the governing federal law – the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP).

The proposed plan is available for public review and comment from July 12, 2021, to September 10, 2021. It identifies the Corps of Engineers' preferred alternative to address contaminated buildings, soil, and groundwater at the Guterl Site: Site-Wide Alternative 3. The alternative includes: dismantlement and off-site disposal of buildings that were involved in Atomic Energy Commission activities during the 1940s and 1950s; complete soil removal to the soil preliminary remediation goal for groundwater protection and off-site disposal; and uranium groundwater plume recovery using extraction wells and an *in situ* rubblelized trench with *ex situ* treatment, and environmental monitoring of groundwater plume attenuation (enhanced and natural). Site-Wide Alternative 3 complies with the identified regulations and provides the best balance among the five NCP balancing criteria (i.e., long-term effectiveness and permanence; reduction of toxicity, mobility, and volume through treatment; short-term effectiveness; implementability; and cost).

The feasibility study is a supporting document to the proposed plan. The report identifies, develops and evaluates remedial alternatives to address FUSRAP-related constituents of concern (thorium-232 and uranium in soil and buildings, and uranium in groundwater) at the site.

You are invited to attend a virtual public meeting on Thursday, July 29, 2021, at 7 p.m. to provide comments on the proposed plan. Space is limited, so please email fusrap@usace.army.mil by Wednesday, July 28, 2021, at 4 p.m. to register for the meeting, and to let us know if you will be providing comments. The public meeting presentation is available on the website in the Public Presentations section. The virtual public meeting will be recorded so that oral comments received can be captured.

You are encouraged to email your comments to fusrap@usace.army.mil by September 10, 2021. Written comments may be mailed to the U.S. Army Corps of Engineers, Buffalo District, Attention: Environmental Project Management Section, 1776 Niagara Street, Buffalo, New York 14207, by the close of the comment period.

The preferred alternative may be modified based on any new information acquired during the designated public comment period. Responses to comments received will be provided in the record of decision, which will identify the selected remedy to be implemented.

The administrative record file for the Guterl Site, which contains the documents supporting the proposed plan, is available on the project website.

If you have any questions please contact Ms. Natalie Watson, Guterl Specialty Steel Site Project Manager, by telephone at (716) 879-4422.

Sincerely,

A handwritten signature in black ink, appearing to read "Eli S. Adams". The signature is fluid and cursive, with a long horizontal stroke at the end.

Dear Mr. Forcucci:

The U.S. Army Corps of Engineers is pleased to announce the public release of two documents: the *Proposed Plan for the Former Guterl Specialty Steel Corporation Site* and the *Feasibility Study Report, Former Guterl Specialty Steel Corporation*. These documents and a fact sheet are available at <https://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/Guterl-Steel-Site/> in the Reports section and the Fact Sheet section respectively.

The Guterl Site, located in Lockport, New York, is being addressed under the authority of the Formerly Utilized Sites Remedial Action Program (FUSRAP). The Corps of Engineers is the lead federal agency for the program, which is conducted in accordance with the governing federal law – the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP).

The proposed plan is available for public review and comment from July 12, 2021, to September 10, 2021. It identifies the Corps of Engineers' preferred alternative to address contaminated buildings, soil, and groundwater at the Guterl Site: Site-Wide Alternative 3. The alternative includes: dismantlement and off-site disposal of buildings that were involved in Atomic Energy Commission activities during the 1940s and 1950s; complete soil removal to the soil preliminary remediation goal for groundwater protection and off-site disposal; and uranium groundwater plume recovery using extraction wells and an *in situ* rubblelized trench with *ex situ* treatment, and environmental monitoring of groundwater plume attenuation (enhanced and natural). Site-Wide Alternative 3 complies with the identified regulations and provides the best balance among the five NCP balancing criteria (i.e., long-term effectiveness and permanence; reduction of toxicity, mobility, and volume through treatment; short-term effectiveness; implementability; and cost).

The feasibility study is a supporting document to the proposed plan. The report identifies, develops, and evaluates remedial alternatives to address FUSRAP-related constituents of concern (thorium-232 and uranium in soil and buildings, and uranium in groundwater) at the site.

You are invited to attend a virtual public meeting on Thursday, July 29, 2021, at 7 p.m. to provide comments on the proposed plan. Space is limited, so please email fusrap@usace.army.mil by Wednesday, July 28, 2021, at 4 p.m. to register for the meeting, and to let us know if you will be providing comments. The public meeting presentation is available on the website in the Public Presentations section. The virtual public meeting will be recorded so that oral comments received can be captured.

You are encouraged to email your comments to fusrap@usace.army.mil by September 10, 2021. Written comments may be mailed to the U.S. Army Corps of Engineers, Buffalo District, Attention: Environmental Project Management Section, 1776 Niagara Street, Buffalo, New York 14207, by the close of the comment period.

The preferred alternative may be modified based on any new information acquired during the designated public comment period. Responses to comments received will be provided in the record of decision, which will identify the selected remedy to be implemented.

The administrative record file for the Guterl Site, which contains the documents supporting the proposed plan, is available on the project website.

If you have any questions, please contact me by telephone at (716) 879-4422.

Sincerely,

Natalie L. Watson

BUFFALO, NEW YORK 14207-3199

July 6, 2021

Mr. Paul Dicky
Environmental Health Director
Niagara County Health Department
5467 Upper Mountain Road
Suite 100
Lockport, NY 14094

Dear Mr. Dicky:

The U.S. Army Corps of Engineers is pleased to announce the public release of two documents: the *Proposed Plan for the Former Guterl Specialty Steel Corporation Site* and the *Feasibility Study Report, Former Guterl Specialty Steel Corporation*. These documents and a fact sheet are available at <https://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/Guterl-Steel-Site/> in the Reports section and the Fact Sheet section respectively.

The Guterl Site, located in Lockport, New York, is being addressed under the authority of the Formerly Utilized Sites Remedial Action Program (FUSRAP). The Corps of Engineers is the lead federal agency for the program, which is conducted in accordance with the governing federal law – the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP).

The proposed plan is available for public review and comment from July 12, 2021, to September 10, 2021. It identifies the Corps of Engineers' preferred alternative to address contaminated buildings, soil, and groundwater at the Guterl Site: Site-Wide Alternative 3. The alternative includes: dismantlement and off-site disposal of buildings that were involved in Atomic Energy Commission activities during the 1940s and 1950s; complete soil removal to the soil preliminary remediation goal for groundwater protection and off-site disposal; and uranium groundwater plume recovery using extraction wells and an *in situ* rubble trench with *ex situ* treatment, and environmental monitoring of groundwater plume attenuation (enhanced and natural). Site-Wide Alternative 3 complies with the identified regulations and provides the best balance among the five NCP balancing criteria (i.e., long-term effectiveness and permanence; reduction of toxicity, mobility, and volume through treatment; short-term effectiveness; implementability; and cost).

The feasibility study is a supporting document to the proposed plan. The report identifies, develops, and evaluates remedial alternatives to address FUSRAP-related constituents of concern (thorium-232 and uranium in soil and buildings, and uranium in groundwater) at the site.

You are invited to attend a virtual public meeting on Thursday, July 29, 2021, at 7 p.m. to provide comments on the proposed plan. Space is limited, so please email fusrap@usace.army.mil by Wednesday, July 28, 2021, at 4 p.m. to register for the meeting, and to let us know if you will be providing comments. The public meeting presentation is available on the website in the Public Presentations section. The virtual public meeting will be recorded so that oral comments received can be captured.

You are encouraged to email your comments to fusrap@usace.army.mil by September 10, 2021. Written comments may be mailed to the U.S. Army Corps of Engineers, Buffalo District, Attention: Environmental Project Management Section, 1776 Niagara Street, Buffalo, New York 14207, by the close of the comment period.

The preferred alternative may be modified based on any new information acquired during the designated public comment period. Responses to comments received will be provided in the record of decision, which will identify the selected remedy to be implemented.

The administrative record file for the Guterl Site, which contains the documents supporting the proposed plan, is available on the project website.

BUFFALO, NEW YORK 14207-3199

July 6, 2021

Mr. Stephen Gavitt, CHP, Director
Bureau of Environmental Radiation Protection
NYS Department of Health
Empire State Plaza
Corning Tower, 12th Floor
Albany, New York 12237

Dear Mr. Gavitt:

The U.S. Army Corps of Engineers is pleased to announce the public release of two documents: the *Proposed Plan for the Former Guterl Specialty Steel Corporation Site* and the *Feasibility Study Report, Former Guterl Specialty Steel Corporation*. These documents and a fact sheet are available at <https://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/Guterl-Steel-Site/> in the Reports section and the Fact Sheet section respectively.

The Guterl Site, located in Lockport, New York, is being addressed under the authority of the Formerly Utilized Sites Remedial Action Program (FUSRAP). The Corps of Engineers is the lead federal agency for the program, which is conducted in accordance with the governing federal law – the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP).

The proposed plan is available for public review and comment from July 12, 2021, to September 10, 2021. It identifies the Corps of Engineers' preferred alternative to address contaminated buildings, soil, and groundwater at the Guterl Site: Site-Wide Alternative 3. The alternative includes: dismantlement and off-site disposal of buildings that were involved in Atomic Energy Commission activities during the 1940s and 1950s; complete soil removal to the soil preliminary remediation goal for groundwater protection and off-site disposal; and uranium groundwater plume recovery using extraction wells and an *in situ* rubble trench with *ex situ* treatment, and environmental monitoring of groundwater plume attenuation (enhanced and natural). Site-Wide Alternative 3 complies with the identified regulations and provides the best balance among the five NCP balancing criteria (i.e., long-term effectiveness and permanence; reduction of toxicity, mobility, and volume through treatment; short-term effectiveness; implementability; and cost).

The feasibility study is a supporting document to the proposed plan. The report identifies, develops, and evaluates remedial alternatives to address FUSRAP-related constituents of concern (thorium-232 and uranium in soil and buildings, and uranium in groundwater) at the site.

You are invited to attend a virtual public meeting on Thursday, July 29, 2021, at 7 p.m. to provide comments on the proposed plan. Space is limited, so please email fusrap@usace.army.mil by Wednesday, July 28, 2021, at 4 p.m. to register for the meeting, and to let us know if you will be providing comments. The public meeting presentation is available on the website in the Public Presentations section. The virtual public meeting will be recorded so that oral comments received can be captured.

You are encouraged to email your comments to fusrap@usace.army.mil by September 10, 2021. Written comments may be mailed to the U.S. Army Corps of Engineers, Buffalo District, Attention: Environmental Project Management Section, 1776 Niagara Street, Buffalo, New York 14207, by the close of the comment period.

The preferred alternative may be modified based on any new information acquired during the designated public comment period. Responses to comments received will be provided in the record of decision, which will identify the selected remedy to be implemented.

The administrative record file for the Guterl Site, which contains the documents supporting the proposed plan, is available on the project website.

A copy of this letter is being provided to Ms. Cynthia Costello, MS, MPH, CHP, Chief, Environmental Radiation Protection Section, NYS Department of Health. If you have any questions, please contact me by telephone at (716) 879-4422.

Sincerely,

Natalie L. Watson
