Good Day [REDACTED]

Having some time this weekend it was very nice to see how different agencies like the DOE are building digital tools to help clarify the story of these FUSRAP sites. The Fernald site has the digital overlay map that has test wells, history and current photos all on the same site. You might say the Whole tells a story better than the sum of it's parts.

Thanks for the updates you send. Many of us do look them over. Ironically this digital guy did receive a printed copy of the Vicinity Properties Report at the last ACE meeting and it was an interesting view back at history. And I must admit that the paper copy was easier to cross reference, foot note and diagram, but not to share with others of course.

Hope you had a great holiday too.
See you at the next meeting.

Hello from the U.S. Army Corps of Engineers Buffalo District:

We are sending this to you on behalf of the U.S. Department of Energy.

The U.S. Department of Energy has posted the desktop evaluation of the radiological cleanup of several closed vicinity properties at the Niagara Falls Storage Site.

The "Niagara Falls Storage Site Vicinity Properties, New York: Review of Radiological Conditions at Six Vicinity Properties and Two Drainage Ditches" report is available on the Office of Legacy Management webpage at:

<http://www.lm.doe.gov/Niagara/Vicinity/Documents.aspx>

Stakeholder concerns about final conditions at certain Niagara Falls Storage Site Vicinity Properties (VP) prompted DOE to respond to the community with a detailed data review of six selected VPs (VP-Q, VP-R, VP-S, VP-T, VP-W, and VP-X) and associated drainages for which DOE completed remediation activities under the Formerly Utilized Sites Remedial Action Program (FUSRAP).

A preliminary report was made available for public review and comment on March 19, 2010 and comments were accepted through June 14. DOE considered all public comments in finalizing the report and included a responsiveness summary addressing all comments in an attachment to the final report. The report also contains a bibliography of all documents reviewed.

This report is not a decision document nor a regulatory requirement and is based on documentation and records currently available to DOE. In the event that additional information becomes available, DOE will revisit the report and revise its conclusions as is warranted.

DOE continues to encourage stakeholders to provide information at any time that they might have concerning the Niagara Falls Storage Site VPs.

DOE will address any questions from the public about the report and its conclusions during the poster session and roundtable discussion during the U.S. Army Corps of Engineers Lake Ontario Ordinance Works (LOOW) Site and the Niagara Falls Storage Site (NFSS) public workshop on Wednesday, Nov. 3, 2010, from 6 to 9 p.m. in the Lewiston Senior Center, 4361 Lower River Road, Youngstown, NY 14174.

If you have any questions concerning the report or would like more information, please contact:
