Hello [REDACTED]

We continued our search for the documents you requested in your letter to [REDACTED] on February 22 and have been able to locate a hard copy of Reference Number 9 - FUSRAP Data Transmittal D-28115. The package is specifically data from Building 403 which has been taken down. We will bring the package with us Wednesday night to provide to you.

Please keep in mind that this document was delivered to the Buffalo District in August of 1998 and the project has had several different project managers and project engineers since then. The Buffalo District is currently working with a records contractor to develop an updated Administrative Record for the Niagara Falls Storage Site. We have been providing our contractor with all of our boxes of hard copy documents for sorting, cataloging, and digitizing. The contract with Bechtel National, Inc., did not end when the Corps received FUSRAP; thus the explanation for the document you requested being in the microfiche files.

We are still unable to locate Reference Number 8 - SEC radiological survey data for NFSS Building 401, S/N S7789/S9012; dated October 1996. If we are able to locate it, we will forward it to you.

Sincerely,

[REDACTED]
