**Re: Objection to Disposal of Radioactive Residues or Wastes at the Niagara Falls
Storage Site (NFSS)**

Dear [REDACTED],

This letter is in response to the Army Corps of Engineers "Waste Disposal Options" for radioactive material which was outlined at the September 28, 2011 public workshop.

At this public workshop, a radioactive waste "disposal" facility was included in two of the three options being considered by the Army Corps. The Village Board of Lewiston would like to make perfectly clear that we support the third alternative: removal of all radioactive residues and wastes from NFSS. We also strongly object to a permanent "disposal" or extended temporary storage of radioactive waste or residues at the NFSS.

The Corps also announced at this workshop, "We learned that K-65 can be removed safely." With that thought in mind, we strongly urge the federal government to safely remove all of the radioactive residues and wastes from the Niagara Falls Storage Site as soon as possible. The interim waste containment structure (IWCS) at the NFSS was constructed in the 1940's and we are very concerned with the soundness of this structure.

In addition, when clean up is commenced the only acceptable standard we would consider is for "unrestricted use". It is time to clean up this area and let our community get on with life without further threat of future contamination.

Sincerely,

[REDACTED]
