RE: Future Land Use, Public Comments for the Niagara Falls Storage Site (NFSS)

Dear [REDACTED],

This letter is in response to the September 28, 2011 public workshop conducted by the Army Corps of Engineers regarding "Waste Disposal Options" for radioactive material in temporary storage at the NFSS, located in Lewiston, NY.

The implications of Future Land Use preferences on the selection of clean-up standards for the NFSS were not disclosed to residents who attended the workshop. In addition, a "summary of public comments" (Oct. 4th) report from Army Corps facilitator [REDACTED] omitted comments from residents at the workshop which called for residential use. Agricultural use has also been mentioned as a potential Future Use by certain RAB stakeholders. As a result, the RAB felt it was important to survey residents on Future Land Use within the context of general clean-up standards, and forward initial results to you.

Note: This Survey assumes that the Corps is capable of executing a clean-up that would meet any of the Future Use options. If that is not the case, would you kindly inform us.

Copies of each response are attached.¹ The 117 responses as of December 8th are summarized as follows:

1. We want the federal government to?

Safely remove all NFSS radioactive waste as soon as possible and dispose off-site	114
Construct a permanent radioactive waste landfill on the NFSS for some wastes, & remove others	0
Reinforce the containment cap and keep all radioactive waste at the NFSS, permanently	2
No response marked	1

2. What standard for NFSS clean up should the Army Corps achieve?

Safest clean up: 'Unrestricted' use (residential standard)	113
Moderate clean up: 'Industrial' use	4
Minimal clean up: 'Recreational' use	0

3. When should radioactive waste be safely removed?

As soon as possible	115
After small or moderate leaking occurs	2
After major containment failure	0

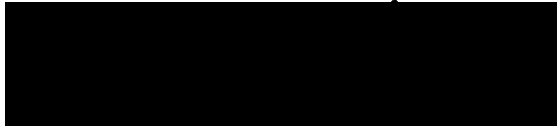

¹ Names and street numbers have been redacted for privacy protection, unless otherwise required.

Breakdown of responses from:

Lewiston/Porter	Other Niagara Cty.	WNY	Out-of-State	TOTAL
92	9	9	7	117

Thank you for your consideration.

Sincerely,

LOOW RAB

Sent: Wednesday, December 07, 2011 10:07 PM

Address: [REDACTED]

Subject: LOOW RAB Questionnaire

Question 1: Safely remove all NFSS radioactive waste as soon as possible and dispose off-site

Question 2: Safest clean up: 'Unrestricted' use (residential standard)

Question 3: As soon as possible

Message Body: Clearly, the current situation is unacceptable and the site should be addressed. Given the lack of long-term planning that took place while the site was in use, the instability of the storage solution poses significant hazards to Lewiston and Porter residents, and most significantly to the Lewiston-Porter School community, where my children attend. Please continue to encourage the Army COE to do the right thing and address the issue as thoroughly as possible.

Subject: LOOW RAB Questionnaire

Question 1: Safely remove all NFSS radioactive waste as soon as possible and dispose off-site

Question 2: Safest clean up: 'Unrestricted' use (residential standard)

Question 3: As soon as possible

Message Body: The definition of temporary is;lasting, existing, serving, or effective for a time only; not permanent; Lasting a limited time. It is only a matter of time that the temporary containment leaks/fails or is targeted by a terrorist group.

With the NFSS so close to a complete school system (7-12) we owe it to our future generations to protect them against potential harm. We have laws and regulations that prevents predators from living/being so close to schools and playgrounds, so we should have something thats keeps thier health as safe as possible also.

Question 1: Safely remove all NFSS radioactive waste as soon as possible and dispose off-site

Question 2: Safest clean up: 'Unrestricted' use (residential standard)

Question 3: As soon as possible

Message Body:

Its frustrating that these questions even need to be asked. With the Lew Port schools being so close to this site the safest cleanup (residential standard) seems like the only reasonable choice as well as just removing all waste. Not to mention that there are probably hundreds of private homes located near this area as well.

Question 3: As soon as possible

Message Body:

This site was originally set up as a 'temporary' site, to which it was not engineered to 'permanent' standards. The word 'temporary (or interim)' was dropped from the name a short time later. While it may not necessarily be 'leaking', let us not assume that deterioration or infiltration is not out of the realm of possibility.

Question 3: As soon as possible

Message Body:

Why does Niagara county have to even be considered for additional problems? We all know that being close to Lake Ontario is not a proper place for this waste. Get the stuff out of here and be done with this problem. We have been living with this long enough.

Question 1: Safely remove all NFSS radioactive waste as soon as possible and dispose off-site

Question 2: Moderate clean up: 'Industrial' use

Question 3: As soon as possible

Message Body:

The probable high cost of proper removal and storage is a barrier to getting in done now. We need to fix our economy and stop sinking further into deep debt first. But we need to keep the issuse live and push for action when funds can be made available.

Question 3: As soon as possible

Message Body:

I have been watching this story for decades. It is time for this to be resolved. Went to school when the silo was "open" and now they want to just make it a dump for wastes that they are dealing with elsewhere? This is the easy and cheap way out and the risk is for the local residents. This is really a national level story in terms of the interest and support it would receive in my opinion.

I still have family nearby so have a vested interest in this effort. Thanks for creating the website and your efforts.
