With the enhancements to the Environmental Surveillance Program for NFSS there was a larger amount of data to review and prepare for the Technical Memorandum. The 2010 data will be available in the report which will be released in January.

Have a happy new year!

[REDACTED]

That should have been March 2011.

Merry Christmas,

[REDACTED]

Thank you, but please advise why the Corps is not following the published schedule for data release to the public. Some environmental monitoring results should have been published as early as March 2010.

The ESP will be released in January.
Happy Holidays!

[REDACTED]

Will the 2010 NFSS environmental surveillance report be issued in 2011, as specified in the 2008 fact sheet? I ask because some 2010 environmental data should have been released as early as the first quarter of 2011, but is still unavailable. The unexplained restriction of 2010 environmental surveillance to the public is cause for concern. As you are aware, many people, including myself, believe that the Interim Waste Containment Structure is already leaking and therefore are interested in reviewing the results of the recently expanded NFSS environmental surveillance. Please explain why the Corps is not adhering to the published schedule for data release to the public.

Thank you,

[REDACTED]
