

## Niagara Falls Storage Site contract awarded

The U.S. Army Corps of Engineers has awarded a \$114,900 contract to Energy Environmental Technology Co. of Southfield, Mich., to perform low-level radiological waste removal services at the Niagara Falls Storage Site, located in Lewiston. **500HP**

The corps will remove various containers and drums containing low-level radioactive wastes that have been stored on the site for several years. The work consists of performing radiological surveys, sampling, characterization, waste packaging and disposal activities. Samples will be analyzed for gross alpha/beta, gamma, asbestos and TCLP (toxic characteristic leaching procedure) for metals, including copper and zinc. Work will comply with all applicable federal, state and local laws and regulations and should be completed by December.
