**SUBJECT: Poster Session for the Seaway Formerly Utilized Sites Remedial Action Program Site**

Dear Interested Citizen:

You are invited to a poster session for the Seaway Formerly Utilized Sites Remedial Action Program (FUSRAP) Site on Thursday, June 4, 2015, between 6:30 and 8:30 p.m. in the Community Room of the Kenmore-Town of Tonawanda Union Free School District Phillip Sheridan Building at 3200 Elmwood Avenue, Kenmore, New York. This meeting is being conducted to inform the public of the upcoming soil remediation of the Seaway Northside and Seaway Southside areas in accordance with the October 2009 record of decision. The poster session will be conducted in an open house fashion with project delivery team members available to talk with you and answer your questions regarding the Seaway Formerly Utilized Sites Remedial Action Program (FUSRAP) Site.

The Seaway Site, located in Tonawanda, New York, was operated as a landfill from 1930 to 1993, accepting a variety of municipal, commercial, construction, and industrial wastes. Nearby, in the 1940s, the former Linde Air Products Division of Union Carbide processed uranium ores under contract to the Manhattan Engineer District. The mill tailings from the FUSRAP-related activities were transported from the Linde Site with some of the FUSRAP-related material subsequently being used as cover or grading material in select areas of the Seaway Landfill. Investigation of perimeter areas of the Seaway Landfill also found FUSRAP-related materials outside of the Seaway containment system (i.e., outside the area encompassed by the landfill's leachate collection system). These areas are referred to as the Seaway Northside and Southside areas. The current remedial action includes excavation and off-site disposal of FUSRAP-contaminated soils that exist outside the boundaries of the landfill leachate collection system. Remedial activities within the landfill will occur at a later date.

FUSRAP was initiated in 1974 to identify, investigate, and clean up or control sites throughout the United States that were part of the nation's early atomic energy program. The Corps of Engineers, as lead federal agency for FUSRAP, follows the phased process required in the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, and the National Oil and Hazardous Substances Pollution Contingency Plan.
