1.0 Overview of the Community Relations Plan

The United States Army Corps of Engineers (USACE), Buffalo District has designed this Community Relations Plan to facilitate communication between the Tonawanda community and USACE during the remedial action to be performed at the Seaway Site under the Formerly Utilized Sites Remedial Action Program (FUSRAP). It has been prepared to guide the USACE, Buffalo District in proceeding with a community relations program tailored to the needs of the Tonawanda community.

Federal regulations require that during a remedial action federal agencies develop community relations programs to be consistent with the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP). These requirements are the basis for more comprehensive and effective community relations activities.

It is USACE policy to involve the public in the decision-making process for the Seaway Site and to keep the public informed. This plan describes how the public has been involved in the investigation and decision-making process to date, and how they will continue to be involved. This plan includes:

- Public Involvement Goals and Objectives
- FUSRAP Historical Information
- Site Location, Description, and History
- Community Background
- Community Relations Activities

The information in this plan is based on previous USACE/DOE experience in the Tonawanda community, Environmental Protection Agency (EPA) guidance on community relations, and ongoing interaction with community members.

1.1 Goals and Objectives

It is the goal of USACE, Buffalo District to be honest, forthright, responsive, and clear in dealing with the public, elected officials, interest groups, and the media.

It is the objective of USACE, Buffalo District to increase public awareness of the program and its activities; decrease misunderstanding about environmental problems and potential dangers; facilitate two-way communication with the affected public; establish an effective means for dispute resolution; and enhance Buffalo District's ability to perform this mission in the most effective and efficient manner.

1.2 Schedule of Activities Addressed by this Community Relations Plan

The tentative schedule for the FUSRAP Seaway Site is as follows:

Schedule	Activity
2/25/99	Held information session to update community on the status of the site.
9/27/02	Release proposed plan for public comment.
11/7/02	Hold public meeting for proposed plan.
5/5/03	Issue Record of Decision and Responsiveness Summary.
Jan - June 2003	Conduct meetings or telephone conferences with state and local officials to discuss USACE, Buffalo District remedial action plans.
July 2004	Prepare a fact sheet to explain the remedial actions and how they will affect stakeholders.
April 1, 2004	Site remediation begins.
As necessary throughout remedial action	Conduct information sessions with the Tonawanda Community to inform them in regard to the remedial action and address their concerns.
July 1, 2005	Site closure.

1.3 Access to Information and Opportunities for Public Comment

The USACE, Buffalo District Public Affairs Specialist is [REDACTED]. She can be reached at [REDACTED] or 1-800-833-6390.

Information about the Seaway Site can be found in the Tonawanda Sites Administrative Record File and the Seaway Site Administrative Record File established in the Tonawanda Public Library located at 333 Main Street, Tonawanda, New York, and the USACE FUSRAP Public Information Center located at 1776 Niagara Street, Buffalo, New York. Additional information, including all of the reports and documents that were used to support the proposed plan for the Seaway Site, Areas A, B, and C are part of the Administrative Record File.

Individuals and organizations may be placed on the mailing list by calling 1-800-833-6390. Public comments should be mailed to Michele Hope at the USACE FUSRAP Public Information Center, 1776 Niagara Street, Buffalo, NY 14207-3199. You can also contact the Corps by email at: fusrap@usace.army.mil. Our website is: <http://www.lrb.usace.army.mil/fusrap>.

Significant developments relating to the Corps' activities at the Seaway Site will be announced by news release to the media, placement of display ads in the local newspapers, and updates to the website.

2.0 Program Historical Information

FUSRAP was initiated in 1974 to identify, investigate, and clean up or control sites throughout the United States that were part of the Nation's early atomic energy program during the 1940s, 1950s, and 1960s. Activities at the sites were performed by the Manhattan Engineer District (MED) or under the Atomic Energy Commission (AEC).

Both MED and AEC were predecessors of the Department of Energy (DOE). In October 1997, management of FUSRAP was transferred to the U.S. Army Corps of Engineers. The Buffalo District is investigating the Seaway Site and will perform actions in accordance with CERCLA and the NCP.

3.0 Seaway Site Information

3.1 Site Location, Description, and History

The Manhattan Engineer District (MED), a predecessor of the U.S. Department of Energy, hired the former Linde Air Products Division of Union Carbide to process uranium from 1942 to 1946. Linde was selected because of its experience in the ceramics business, which involved processing uranium to produce the “salts” used for coloring ceramic glazes. Residues from uranium processing were transported from the Linde Site to the Ashland 1 Site and Seaway Area D. Some of this material was later relocated to the Seaway Areas A, B, C, and the Ashland 2 Site (see Figure 3.1a). Approximately 6,000 cubic yards of low-grade uranium tailings were disposed of on Seaway Areas A, B, and C in 1974.

The Seaway Site is located along River Road in Tonawanda, New York in an urban/industrial area. Between 1974 and 1982, the Site was contaminated during the transfer of soil containing low-level radioactive residues from the Ashland 1 Site. At the time, the Seaway Site was a sanitary landfill operated by Browning-Ferris Industries, which ceased operations in 1993. The Site comprises about 100 acres of which the landfill occupies about 89 acres and is called the Seaway Industrial Park. About 68 acres of the landfill have been capped in accordance with requirements of the New York State Department of Environmental Conservation (NYSDEC). The current owner of the site is the Sands Mobile Park Corporation.

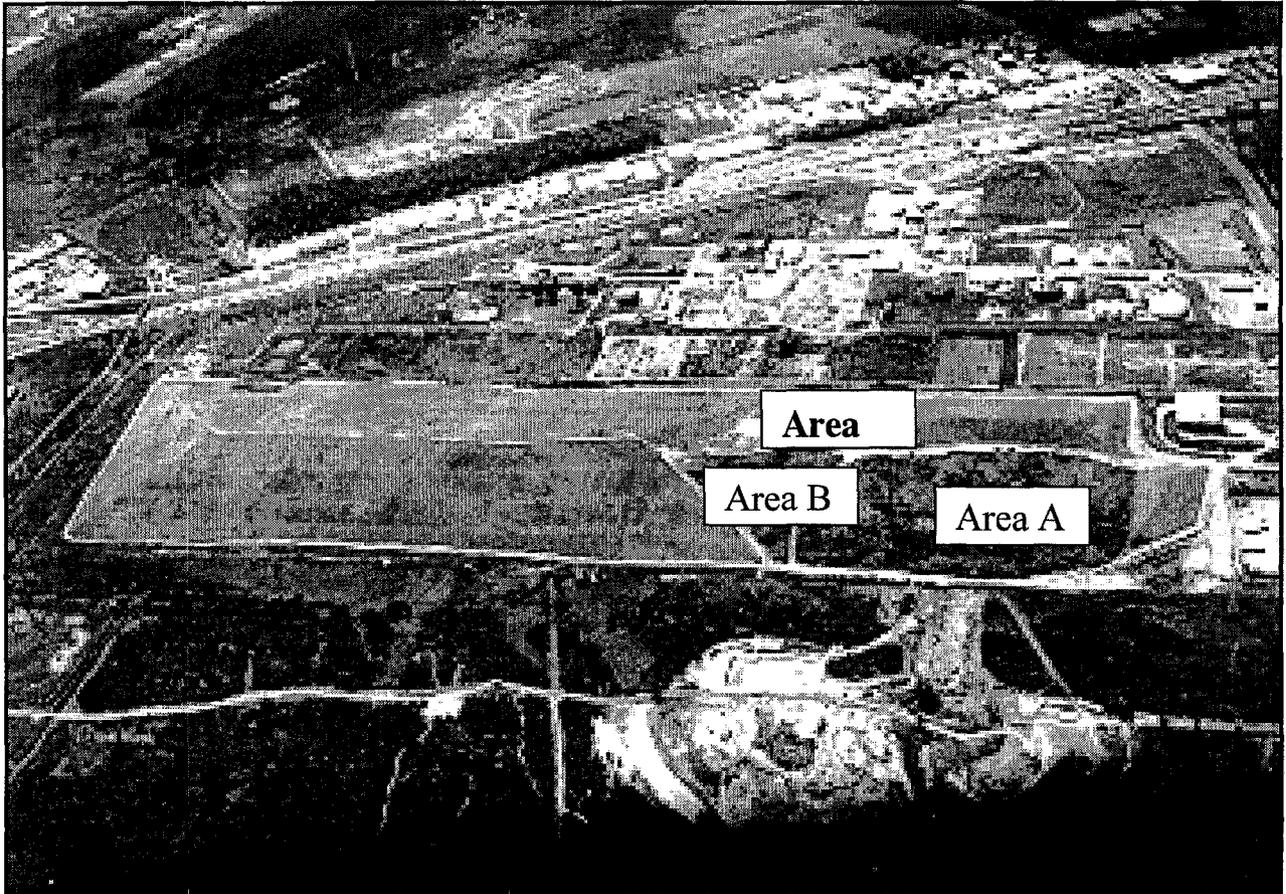

Contamination had been identified in four areas of the Seaway Site, known as Areas A, B, C, and D. Areas A, B and C are being managed under the Seaway Site project. Area D was included in the Record of Decision, dated April 1998, for the Ashland 1 and Ashland 2 Sites. It is being remediated along with the Ashland 1 Site.

Area A is approximately nine acres. Approximately 40 percent of the MED-related material is covered by a layer of fill material and refuse up to 10 feet thick. Areas B and C, combined, are approximately three acres. It is estimated that the MED-related material in Areas B and C have been covered with up to 40 feet of fill material and refuse.

3.2 Surrounding Area

The Seaway Site is situated in an industrial area. Residential neighborhoods are located approximately one mile to the east and southeast. The northern edge of the Seaway property is about 1,000 feet from the Niagara River. This waterfront is a multipurpose

recreation area; future development of residential areas, commercial areas, and a public park along the waterfront is a major community goal. The southern edge of the Seaway property is also industrial with several small businesses located in the area.

3.1a Seaway Site Areas A, B, and C

3.3 Type of Hazardous Substances at the Site

The principal radioactive contaminant in FUSRAP Seaway Site Area A is thorium-230. In addition to thorium-230, radium-226 and uranium-238 are present in Areas A, B and C. The site in its current condition poses no immediate risk. A plan is being proposed for remediation to comply with applicable or relevant and appropriate requirements and to ensure long-term protectiveness of human health and the environment.

4.0 Community Background

4.1 Government Entities

The Seaway Site is located in the Town of Tonawanda, Erie County, New York. Town voters elect a Supervisor and six council members as legislators and town administrators. Residents normally direct their questions, complaints, and suggestions to the Town Clerk, who forwards them to the proper department or official.

The Erie County government includes a County Executive and county legislature. The County Executive is the chief administrative officer of the county and is elected to a four-year term. The legislature is currently composed of 17 members.

The City of Tonawanda is adjacent to the Town of Tonawanda. Although the Seaway Site is not located in the City of Tonawanda, it is very close to the city limit. The City of Tonawanda government includes a Mayor and City Council. The Mayor is elected to a four-year term. The City Council is currently composed of 5 members, elected to two-year terms with the City Council President elected to a four-year term.

4.2 Chronology of Community Involvement

Except for a few newspaper articles regarding the radiological surveys in 1978, the Tonawanda Sites received little public attention until 1988. A public scoping meeting for the remedial investigation/feasibility study-environmental impact statement (RI/FS-EIS) process was held in Tonawanda on April 26, 1988, and a follow-up informational meeting was held on June 16, 1988. During these meetings, local officials and community members expressed great concern regarding the preliminary remedial action alternatives. In particular, the following two options met with virtually unanimous opposition: consolidation of waste at the Tonawanda site from a FUSRAP site in eastern New York (Colonie), and onsite disposal of the Tonawanda wastes.

After the public meetings, local and state officials formed the Coalition Against Nuclear Materials in Tonawanda (CANiT) to present community concerns to DOE. The DOE met frequently with CANiT and, in attempting to resolve community concern over the Colonie waste issue, agreed in August 1988 to a moratorium on Remedial Investigation/Feasibility Study - Environmental Impact Statement (RI/FS-EIS) work in Tonawanda.

Following the moratorium agreement, CANiT enlisted the support of the U.S. Congress in opposing the Colonie waste consolidation issue. CANiT succeeded in having Congress include the following statement in a congressional report on the 1988 Department of Defense appropriations bill: "The conferees agree that the DOE should not move or study the move of any FUSRAP waste within the State of New York to the Town of Tonawanda, New York." DOE agreed to comply with the provisions of this bill and the moratorium was lifted in October 1988, allowing the remedial investigation to begin.

After 1992, periodic meetings (availability sessions) were held with the public to update them on the status of activities at the site. Three sessions were held during 1992 to educate the community about the remedy options for the site and to address any questions or concerns of the community. Over 30 area residents attended the availability sessions.

In March 1993, DOE opened a Public Information Center at 810 Sheridan Drive, Town of Tonawanda, to provide the public with additional access to information and to serve as a meeting place for workshops and availability sessions.

Attendance at the periodic availability sessions continued to grow. Throughout 1993, in addition to availability sessions, a series of workshops were conducted for CANiT members and the public. The DOE Tonawanda Site Manager also spoke to numerous civic organizations throughout the year to provide the community with an overview of the decision-making process and DOE's preferred remedy prior to the public meeting.

On December 1, 1993, DOE held a public meeting to solicit public comment on the proposed plan for the sites. Approximately 175 members of the public attended. The majority of the commentators disapproved of DOE's proposed plan to build a containment structure and leave the material onsite. As a result of comments heard at the meeting, DOE expanded the Tonawanda site mailing list to over 3,000 residents in the areas surrounding the four sites.

Following the DOE public meeting, CANiT held its own public meeting on January 26, 1994, to gather support for its position against the preferred remedy. As a result of community comments over a several-month period, DOE, in a joint action with Representative John LaFalce, suspended the decision-making process in April 1994.

On July 25, 1994, Admiral Richard Guimond, U. S. DOE Principal Deputy Assistant Secretary for Environmental Management, and Congressman John LaFalce held a meeting with Tonawanda stakeholders to discuss the overall remedy selection process. The meeting resulted in commitments by DOE to present a draft work plan for input on a process for working collaboratively with the community on a cleanup remedy as well as conduct a public workshop on treatment technologies. The treatment workshop was held in September 1994 and the work plan meeting in October 1994.

At the October meeting, DOE presented the draft work plan for input on establishing a stakeholder group to work jointly with DOE in generating, evaluating, and selecting a site remedy. The consensus of the 41 people attending the session was to continue allowing CANiT to represent the community in discussions with DOE on remedy selection as opposed to establishing a representative community group.

The DOE continued to work towards a resolution that would be acceptable to the Tonawanda community. When FUSRAP was transferred to USACE, the Buffalo District became responsible for issuing the proposed plan for the Seaway Site. On February 25, 1999 USACE held meetings with representatives of CANiT, the League of Women Voters, and For a Clean Tonawanda Site (F.A.C.T.S.) and the general community to present four potential alternatives for the Seaway Site and pros and cons for each alternative. Members of the audience seemed concerned about the possible problems with capping Areas A, B and C, such as institutional controls, future land use and possible radon emission from the radioactively contaminated soil.

USACE, Buffalo District has identified concerns expressed by the community previously and, after careful evaluation of the plan's ability to be responsive to the community's concerns, the proposed plan will be released in September 2002.

A public meeting will be held in November 2002. A court reporter will be available at the meeting to record formal comments.

5.0 Community Relations Program

5.1 Community Relations Tools

Use of community relations tools on the following table will ensure that the public is well informed about the decision-making process for the FUSRAP Seaway Site and has the opportunity to participate, address issues of concern, and exchange information:

Tool	Description
Toll-free access phone line	1-800-833-6390
USACE, Buffalo District website	www.lrb.usace.army.mil
Information Contact and phone number	[REDACTED]
Administrative Record	The Administrative Record File enables the community to review documents that USACE has used to evaluate the alternatives outlined in the Proposed Plan for the Seaway Site, Areas A, B, and C and to select the preferred alternative.
Locations for the Administrative Record File	USACE FUSRAP Public Information Center, 1776 Niagara St., Buffalo, NY Tonawanda Public Library, 333 Main Street, Tonawanda, New York
Fact Sheets	Fact Sheets will be developed to easily convey information regarding the FUSRAP Seaway Site.
Display Advertisements and News Releases	Display ads will be placed in The Buffalo News, The Tonawanda News, and the Ken-Ton Bee and news releases will be sent to local newspapers to announce upcoming releases or events in regard to the site.
Information Sessions	Information sessions will be held for the community during the remedial action to exchange information and answer questions pertaining to the site.
