

ment.

Shooting an 84 was Kenmore West's Chuckie Panepinto.

Panepinto also shot a 40 on the front nine but ended his day with a 44 on the back nine.

North Tonawanda's Devin Donoghue came into the tournament as the NFL medalist, posting the lowest score during the fall season's NFL championship.

Donoghue shot a 95 to place 58th.

North Tonawanda's Ben Kolbe was the final area finisher, posting a 103.

Williamsville North's Ben Reichert was the overall winner, posting a 69 over 18 holes then in the final 20 posted a 36 on the back nine to come out with a 24-hole total of 105 to take the top honors.

Kenmore East's Ben Shotwell lines up his putt on the 18th green during the opening 18 holes of Monday's Section VI Golf Championships at River Oaks Golf Club in Grand Island. Shotwell just missed the initial 18-hole cut by a single stroke, finishing the tournament with a round of 83 (40-43).

You are invited Seaway Formerly Utilized Sites Remedial Action Program Site Poster Session

You are invited to a poster session for the Seaway Formerly Utilized Sites Remedial Action Program (FUSRAP) Site on **Thursday, June 4, 2015, between 6:30 and 8:30 p.m.** in the Community Room of the **Kenmore-Town of Tonawanda Union Free School District Phillip Sheridan Building** at 3200 Elmwood Avenue, Kenmore, New York. This meeting is being conducted to inform the public of the upcoming soil remediation of the Seaway Northside and Seaway Southside areas in accordance with the October 2009 record of decision. The poster session will be conducted in an open house fashion with project delivery team members available to talk with you and answer your questions regarding the Seaway FUSRAP Site.

The Seaway Site, located in Tonawanda, New York, was operated as a landfill from 1930 to 1993, accepting a variety of municipal, commercial, construction, and industrial wastes. Nearby, in the 1940s, the former Linde Air Products Division of Union Carbide processed uranium ores under contract to the MED. The mill tailings from the FUSRAP-related activities were transported from the Linde Site with some of the FUSRAP-related material subsequently being used as cover or grading material in select areas of the Seaway Landfill. Investigation of perimeter areas of the Seaway Landfill also found FUSRAP-related materials outside of the Seaway containment system (i.e., outside the area encompassed by the landfill's leachate collection system). These areas are referred to as the Seaway Northside and Southside areas. The current remedial action includes excavation and off-site disposal of FUSRAP-contaminated soils that exist outside the boundaries of the landfill leachate collection system. Remedial activities within the landfill will occur at a later date.

FUSRAP was initiated in 1974 to identify, investigate, and clean up or control sites throughout the United States that were part of the nation's early atomic energy program. The Corps of Engineers, as lead federal agency for FUSRAP, follows the phased process required in CERCLA and the National Oil and Hazardous Substances Pollution Contingency Plan.

If you require additional information on the Seaway Site, please visit our website at <http://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/SeawaySite.aspx>, email fusrap@usace.army.mil or call 1-800-833-6390 (Option 4).
