Subject: Town of Tonawanda Landfill

April 26, 2007

[REDACTED]

Dear Sir:

I attended the public meeting last night in the City of Tonawanda.

I agree with the majority of the people and elected officials in saying "remove it"!

During World War II I am sure Linde and other manufacturers of atomic material thought they were safely disposing it, but lo and behold 50 years later we realize that isn't so.

If it is just capped and the materials are left who is to say 40 years down the road OUR grandchildren or great grandchildren will be holding similar public meetings stating it wasn't done correctly in 2007. One can only imagine the price that generation will have paid, possible mutation, illness, infertility and who can guess what else.

In order to prevent that scenario I believe the only answer is to remove it, no matter what risk assessment analysis is done. Zero is the only number acceptable.

Our sons and daughters are in harms way all over the world to protect this land called the USA. We at home have to do our part and literally protect the land.

Thank you,

[REDACTED]

Ahhh...imagining that irresistible "new car" smell?
