Ottawa River Jeep Site, Toledo, OH

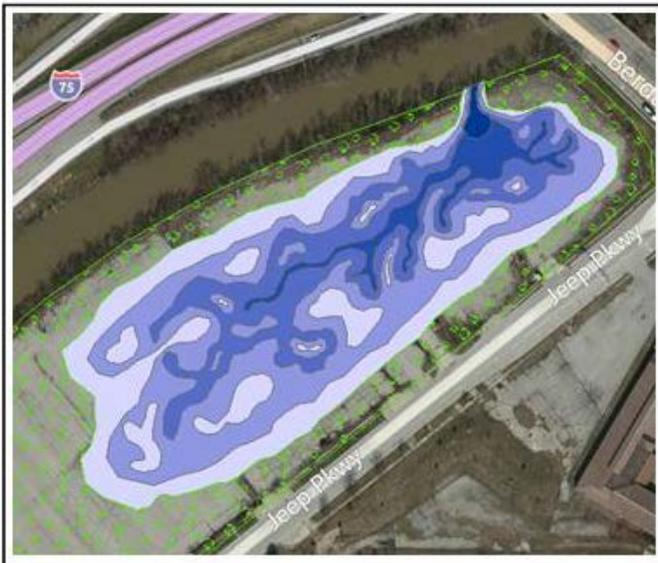

Project Location: The project is adjacent to the Ottawa River in the City of Toledo, Ohio and is within the Maumee River Area of Concern (AOC).

Project Description: The purpose of this project is to restore fish habitat adjacent to the Ottawa River. The project site is an 18 acre parking lot that once served the Jeep manufacturing facility. The project proposes to restore several acres of floodplain wetlands and riparian habitat adjacent to the Ottawa River.

Non-federal partner: City of Toledo

Project Benefits: This project will restore wetland and riverine habitat of the Ottawa River while also absorbing and filtering both flood and surface runoff. The project would capture and treat 3.5 million gallons of urban runoff, restore 0.42 miles of riparian corridor and restore approximately 16 acres of wetlands and riparian habitat. This project supports goals and objectives of the Great Lake Restoration Initiative (GLRI) focus area for Habitat and Wildlife Protection and Restoration and also contribute to resolution of the Loss of Fish and Wildlife Habitat Beneficial Use Impairment listed for Maumee River AOC. Restoration of this site as a wetland in the heart of an urban area is integral to the Toledo-Lucas County Port Authority vision to develop the former Jeep manufacturing site as a light industry-office park.

Project Status Project is currently in feasibility phase. If funding is available, project construction could be awarded in spring 2017.

Ottawa River – Proposed Wetland Restoration

Estimated Project Costs	
Federal	\$2,080,000
Non-federal	\$1,120,000
Total	\$3,200,000

Project Milestones	
Complete feasibility study	Jun 2015
Award construction contract	Feb 2017
Complete construction	Sep 2017
