

News from the Corps

Sent: Thu 9/11/2008 12:53 PM

Hello from the US Army Corps of Engineers Buffalo District:

Last night the Corps technical team for Niagara Falls Storage Site held its second meeting with the public regarding the Remedial Investigation Report for the site. The meeting started with an availability session to promote dialog between the team and the community. The presentation, which is available on the Corps website at <http://www.lrb.usace.army.mil/fusrap/nfss/index.htm#Documents>, included responses to comments received from the community during the Corps' initial meeting for the report held during May 2008.

We appreciate the input received from the members of the community that attended last night's meeting. The Corps will begin preparation of a responsiveness summary to comments received regarding the remedial investigation in October 2008.

You are encouraged to provide input to the Corps for the development of a Community Relations Program for the Former Lake Ontario Ordnance Works Site. We would like your opinion as to how often the community would like to hear from us, what methods of activities you would like us to sponsor and how you want to be involved. Information provided will be used to develop the Community Relations Plan for Niagara Falls Storage Site as well.
