

## **News from the Corps**

Sent: Wed 11/26/08 at 2:11 PM

Hello from the Buffalo District of the US Army Corps of Engineers:

The 2007 Niagara Falls Storage Site (NFSS) Environmental Surveillance Technical Memorandum is now available on the Corps website at:

<http://www.lrb.usace.army.mil/fusrap/nfss/#EnvSury>

The environmental surveillance program at NFSS quantifies and evaluates radiological, chemical, and water quality data from the environment at the NFSS. The 2007 Technical Memorandum indicates that measured parameters were within US Department of Energy guidelines and calculated exposure rates to the general public were well within regulatory limits. Site controls are continuing to perform as designed and are fully protective of human health and the environment. These findings are consistent with the findings of prior year evaluations.

Included on the webpage above is a link to a fact sheet that details enhancements made to the NFSS environmental surveillance program for the 2008 fiscal year. A link to the validated data for the NFSS 2008 Radon Flux findings is also available.
