

**NIAGARA FALLS STORAGE SITE
REMEDIAL INVESTIGATION
QUESTIONS FROM 7 MAY 2008 INFORMATION MEETING**

The following questions were received from the community on comment cards after the meeting held on 7 May 2008, regarding the Niagara Falls Storage Site Remedial Investigation. The Corps of Engineers will be posting responses to these questions along with a transcript of the meeting as soon as they are available.

1. Please quantify your conclusion of no ecological damage on the site. Was any effort made to characterize flora and fauna typical of the site prior and post 1942?
2. Were EPA toxicity criteria based on ACGIH levels?
3. The widespread radionuclide samples above background suggest widespread contamination. Were samples taken outside the areas of concern that are more likely to support human habitation?
4. Describe the history and use of Building 409. How do you explain the high rad levels?
