Subject: Supplement to the 60% Design
TNT Pipeline and Chemical Waste Sewer
Phase I Interim Removal Action Components 1, 2, and 3
Former Lake Ontario Ordnance Works (LOOW)

Dear Mr. Marranca:

Per our telephone conversation today, enclosed are electronic files containing the Supplement to the 60% design specifications for the TNT Pipeline and Chemical Waste Sewer at the LOOW Site. The enclosed CD includes the word perfect files for the text portion of the specifications. As discussed, since the figures are in Mac format, the hard copies are provided. In addition, several tables that were not on the Word Perfect files have also been provided in hard copy form. Please let me know if you would like the Mac electronic file or a pdf file of the figures. We can also scan the table and provide a pdf file.

As discussed, the design drawings that were sent on 10 February are the last design submittal (Supplement to 60%). We are having the system backup copy of the two corrupt files retrieved through our computer department. I will call you when we are able to retrieve and recover these files successfully. Thank you for your patients.

Very truly yours,

ROY F. WESTON, INC.
