

SEP 30 1998

SUBJECT: DACW49-98-D-0003 Asbestos Removal Project Phase I & II Somerset Property, Former Lake Ontario Ordinance Works, Lewiston, NY

Mr. John Syms
Balmer Road,
Youngstown, NY

Dear Mr. Syms:

Your concerns regarding the performance of the contractor have been noted and the contractor has been notified both verbally and in writing concerning each item.

The contractor has agreed to handle steel, machinery and equipment with more care to avoid any further damage.

You have agreed to locate and mark all water pipe shut off boxes to preclude any further damage. The contractor has not yet agreed to reinstall the disturbed water housings but, we will pursue that possibility.

The cleared areas, which contain loose ACM, will be abated prior to excavation. The areas will be watered frequently to contain dust. Watering will include access roads and areas cleared of vegetation.

Your earlier request to not reinstall machinery and equipment in building 30-A was honored and equipment was covered with polyethylene, and anchored down. High winds have displaced some of the covering. You have stated that you will install a heavier covering over these items.

Our onsite representatives, Mr. Michael Hrywnak, Mr. Joseph Salvatore, and Mr. Harold Leggett, along with myself, are available to address your concerns as they may arise and if not present, you may contact them at (716) 297-8531.

Your cooperation is appreciated.

Sincerely

SIGNED

David G. Bingert
Contracting Officer's Representative
