TCLP data

Barb/John,

This should be what you need for the Baker tank. I will forward the count rates and locations of the stone pile samples as soon as I receive them.

Tom

Harold,

Please find the attached analysis for the full Baker Tank of water at the LOOW site. Explosive analysis is still outstanding however we should have it by Thursday 12/30/04. Attachment 4113013a is the TCLP data, attachment 4113013r is the rad data.

Reference sample numbers for the stone piles are as follows;  
LOOW-NEP-09 = Composite from North East Pile  
LOOW-SEP-010 = Composite from South East Pile  
LOOW-WP1-012 thru LOOW-WP5-016 = Grab samples along the West Pile.  
Sample locations are marked on the pile with pin flags.  
LOOW-104Clay-02-017 = Backfill material from borrow pit.

Please contact me with any questions or comments.

Thanks,

Jeffrey L. Shirley
