# Luckey Site Cleanup

Formerly Utilized Sites Remedial Action Program • Luckey, Ohio

2023 Data through

24

FEBRUARY

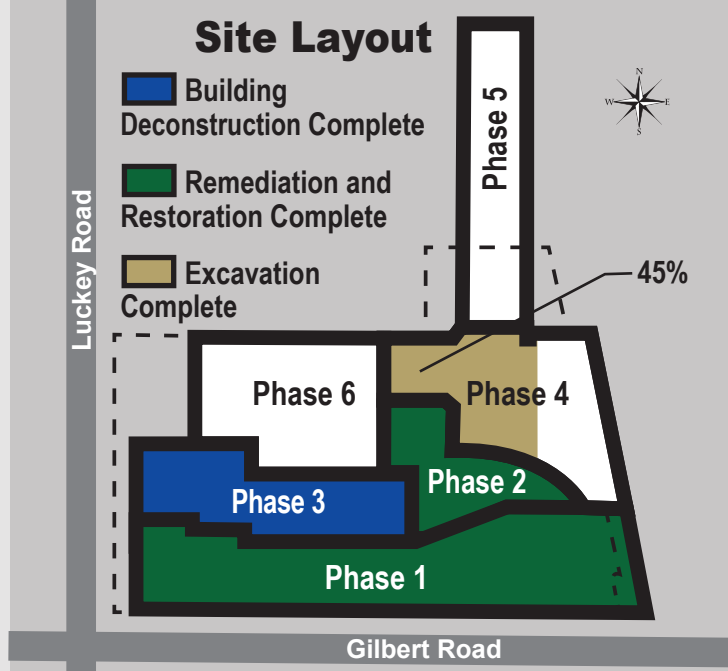

The U.S. Army Corps of Engineers Buffalo District is excavating soils contaminated with beryllium, radium-226, thorium-230, uranium-234, uranium-238, and lead from the Luckey, Ohio, site under the Formerly Utilized Sites Remedial Action Program (FUSRAP). The Corps of Engineers' highest priority during cleanup activities at the site is to be protective of human health and the environment, ensure that work is conducted in a safe and efficient manner, and prevent the spread of contamination. The information below summarizes the cumulative progress made from April 16, 2018, through the date above. These infographics are posted to the Luckey Site website on a weekly basis.

71% Site Remediation Complete

## Total Soil Excavated

137,452  
Cubic yards<sup>a</sup>

<sup>a</sup>Total includes materials disposed during site setup.

## Total Soil Disposed

182,687 Tons<sup>b</sup> = 10,851 Truckloads

5,962,803 Gallons  
Water Transported Offsite for Disposal

3,907,749 Gallons Water Treated Onsite

<sup>b</sup>A thorough review of waste manifests from 2018 through 22 Dec 2022 indicates that 181.2 tons of beryllium, and 123.1 tons of lead were included in the 190,505 tons of material that were transported off-site for disposal as of that date.
