

Luckey Formerly Utilized Sites Remedial Action Program Site News from the Corps of Engineers

Sent: Wed 6/30/2021 10:30 AM

Hello from the U.S. Army Corps of Engineers Buffalo District:

We have awarded a contract modification to deconstruct four additional buildings at the Luckey Formerly Utilized Sites Remedial Action Program (FUSRAP) Site to enable sampling beneath the buildings to determine the presence of FUSRAP-related contaminants.

Deconstruction is a slower, more methodical process of taking a building apart in smaller pieces. It produces much less dust that is controlled with water sprays. We're using this approach to remove the buildings because protection of human health and the environment, and the safety of our workers and the community is our top priority during our remediation of the site.

Work will begin in early July to deconstruct the Melting/Alloying/Shipping Building, the Laboratory Building, the Employee Activity Building, and the Guard House on the site. It is anticipated that building deconstruction will be finished in late August, and building debris loading and shipping will be completed in mid-September. Building debris will be packaged for disposal at US Ecology in Belleville, Michigan.

Remediation and restoration of the Phase 1 and Phase 2 areas of the site is complete. Deconstruction of the production building, maintenance building annex, and the main office building is also complete. A contract to complete the remaining soil remediation will be awarded later this summer.

If you know someone that is interested in the Luckey FUSRAP Site, please ask them to email fusrap@usace.army.mil to be added to our distribution list for updates on our progress in cleaning up the site.
