

Luckey Formerly Utilized Sites Remedial Action Program Site News from the Corps
Sent Tue 11/12/2019 1:02 PM

Hello from the U.S. Army Corps of Engineers Buffalo District:

We continue to make progress with the cleanup of the Luckey Formerly Utilized Sites Remedial Action Program (FUSRAP) Site. As of November 1, the Corps of Engineers has excavated and disposed of 43,507 tons of FUSRAP-contaminated material from the site. Cleanup of the site is 25 percent complete, and the Phase 1 excavation area is 77 percent complete.

This week we will begin transporting up to 120 dump truckloads per day of native soil from Perrysburg, Ohio, to the site. The clean material will be used to backfill the excavation area. The trucks will be covered with a tarp when they are transporting the material. The preferred route per the Wood County Engineers Office will have the trucks travelling northwest on Freemont Pike Road, south on Lime City Road, west on Roachton Road, southeast on McCutcheonville Road, and east on Middleton Pike Road before entering the site. The portion of Luckey Road that leads to the site will be sprayed with water regularly to prevent the spread of dust. The material will be staged in the southeastern portion of the site near Gilbert Road.

Our highest priority during cleanup activities at the Luckey Site is to be protective of human health and the environment, ensure that work is conducted in a safe and efficient manner, and prevent the spread of contamination. For additional information about the site, please visit <https://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/Luckey-Site/> on the Buffalo District website. If you know someone that is interested in receiving News from the Corps updates about our progress at the site, please ask them to email fusrap@usace.army.mil to let us know.
