

## News from the Corps

Hello from the U.S. Army Corps of Engineers Buffalo District:

Beginning on May 8th, 2019, scheduled road work will begin on State Route 582. So as discussed in the last public meeting and in our work plans the Corps will begin utilizing the alternate route for shipping loaded containers of waste from the Luckey Site.

The Corps has worked with the Ohio Department of Transportation to develop an alternate route for the loaded trucks leaving the site for the disposal facility in Michigan.

Trucks loaded with excavated soils will now leave the site and travel to the disposal facility using Interstate 280 and Interstate 75. This designated route is primarily for trucks with loaded containers of waste traveling from the site to the disposal facility. Trucks returning to the site with empty containers will generally follow the same route but may deviate based upon traffic conditions or if they are coming to/from the trucking company yard. Trucks delivering empty containers must still follow designated truck routes that meet weight limit requirements.

The poster detailing the transportation routes, along with other materials relating to the site cleanup including the latest infographic can be found at the links below:
