

## News from the Corps

Hello from the U.S. Army Corps of Engineers Buffalo District:

The Luckey Site project team is excited to unveil a new way to communicate progress at the Luckey Site through the use of an easy-to-understand infographic. The infographic will be updated weekly and contains basic information regarding the total volume of soils excavated, the total tons of waste disposed, the total number of waste shipments, the total volume of collected site water treated, and the percentage of completion for each phase of the project. Additional details regarding how the treated water was used and the number of miles traveled for shipping waste are also shown. The purpose of the infographic is to provide an overall update on the project progress by reporting the major items of interest. The current infographic can be viewed and downloaded from the USACE website at this link, or by following the USACE Buffalo District Facebook Page (<https://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/Luckey-Site/>).

Additionally the Luckey Site project team looks forward to talking with you soon at our public information session. The meeting will be conducted on Tuesday, March 26, 2019, beginning at 6:00 p.m., at the American Legion Post 240 on 335 Park Drive in Luckey, Ohio.

The meeting will feature posters focused on the ongoing cleanup and safety measures that are being taken on the site to protect the workers and the community. A brief presentation will start at 7:00 p.m., followed by a poster session where members of our project team will be on hand to answer any of your questions.

We hope to see you there!

Sincerely,

The Luckey Site Team
