

News from the Corps

Luckey Site Water Management Plan Changes

Greetings from the Buffalo District Corps of Engineers! We would like to update you on changes that are being made to the Water Management Plan for the Luckey FUSRAP site. To help alleviate the accumulation of water in the excavations due to the excessive amount of rain the site has been receiving, we will begin shipping water off-site for disposal starting this week.

The changes to the water management plan include the on-site loading of tanker trucks, transport to the off-site discharge location, and discharge to the approved sanitary sewer point. The sanitary sewer lines are maintained by the Northwestern Water and Sewer District and ultimately lead to the City of Toledo's Publicly Owned Treatment Works. Only water that meets the guidelines of the City of Toledo's publically owned treatment works will be transported off-site for disposal. The Corps has coordinated with the sewer district and City of Toledo to secure the necessary approvals.

The Corps would like you to know this is a temporary measure that is being put in place to ensure site work continues uninterrupted. This change will allow the Corps to responsibly dispose of excess water collected on the site , and prevent remediation work from stopping because our water treatment and storage capacity has been reached.

The Corps of Engineers is committed to keeping you informed during the cleanup of the Luckey Site. For more information about the site, please email fusrap@usace.army.mil, visit: <https://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/Luckey-Site/> or call 800-833-6390 (Option 4).

We will periodically send you News from the Corps emails as new information is available regarding the cleanup. If you know someone that is interested in our progress, please ask them to send an email to fusrap@usace.army.mil and ask to be added to our electronic and/or postal distribution lists.

Sincerely,
The Luckey Project Team
