

Luckey Formerly Utilized Sites Remedial Action Program Site News from the Corps

Sent: Mon11/6/2017 4:38 PM

Hello from the U.S. Army Corps of Engineers Buffalo District with an update on the Luckey FUSRAP Site environmental cleanup project.

We completed removing several non-hazardous soil and debris stockpiles from the site. These materials were safely shipped and disposed at US Ecology Michigan (Wayne Disposal, Inc.).

We began limited excavation of lead-contaminated soils to support site setup activities. The soils are being transported to the US Ecology facility by trucks hauling lined dump trailers. The soils will be treated at the facility before they are placed in the landfill.

We also, after thorough evaluation, have decided we will not dispose of soils from the Luckey Site at the Waste Management Evergreen Recycling and Disposal Facility in Northwood, Ohio.

We plan to send these emails on a bi-weekly basis to update you regarding progress made at the Luckey Site. If you know someone that is interested in receiving these updates, please ask them to email fusrap@usace.army.mil to be added to our electronic distribution list.

For more information please see our project website at:
