

Luckey Formerly Utilized Sites Remedial Action Program Site News from the Corps

Sent Thu 6/21/2018 2:33 PM

Hello from the U.S. Army Corps of Engineers Buffalo District:

The district will begin shipping contaminated soil from the Luckey FUSRAP Site for disposal at the US Ecology, Wayne Disposal Facility in Belleville, Michigan, next week. The safety of the workers and the community, as well as the protection of the environment, continues to be our highest priority for the project.

Materials that are being transported for disposal are loaded into flexible bulk packages inside hard-sided roll-off containers. The flexible bulk packages will be sealed when full, and a tarp will be placed over the containers before they leave the site. The exterior of the waste transportation vehicles and containers will be surveyed prior to leaving the site to ensure that they are not inadvertently spreading contaminated materials off-site. Trucks will be transporting one roll-off container each, which will contain 15 tons of contaminated soil. It is estimated that 11 trucks will leave the site per day during full operation. Truck drivers will be briefed on the transportation route, speed limits, and procedures to be followed at the disposal facility before their truck leaves the site.
