

## Niagara Falls Storage Site News from the Corps

Sent Tue 12/22/2020 9:13 AM

Hello from the U.S. Army Corps of Engineers Buffalo District:

The data from the investigation of Niagara Falls Storage Site Vicinity Property H Prime for materials that pertain to the Formerly Utilized Sites Remedial Action Program (FUSRAP) are now available on the project website in the Reports section <https://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/Niagara-Falls-Storage-Site/>.

The investigation included a radiological scan of the property, and groundwater and soil sampling for FUSRAP constituents (radium-226, radium-228, uranium-234, uranium-235, uranium-238, thorium-228, thorium-230, and thorium-232). For proper waste profiling the soil and water samples collected as part of the investigation were analyzed for Knolls Atomic Power Laboratory (KAPL) radionuclides (cesium-137, strontium-90, and isotopic plutonium).

The analysis of these data will be published in a remedial investigation report, which is currently scheduled for release in 2022. The remedial investigation report will use these data to evaluate the nature and extent of FUSRAP-related material on the vicinity property, and any associated risk to human health and the environment. If it is necessary, the investigation, evaluation, and remediation of KAPL wastes is the responsibility of the U.S. Department of Energy Office of Environmental Management.

If you are aware of someone that might be interested in receiving updates regarding the progress being made at Niagara Falls Storage Site and its vicinity properties, please ask them to email [fusrap@usace.army.mil](mailto:fusrap@usace.army.mil) to let us know.
