1. Overview:

The U.S. Army Corps of Engineers, as the lead federal agency for the Formerly Utilized Sites Remedial Action Program (FUSRAP), prepared this Community Relations Plan to provide a framework for community relations activities for the Seaway FUSRAP Site.

FUSRAP was initiated in 1974 to identify, investigate and, if necessary, clean up or control sites throughout the U.S. contaminated as the result of Manhattan Engineer District (MED) or Atomic Energy Commission (AEC) activities. The U.S. Department of Energy (DOE) managed FUSRAP until the *Energy and Water Development Appropriations Act for Fiscal Year 1998 Public Law 105-62* transferred responsibility for the administration and execution of the program to the Corps on October 13, 1997. The Corps implements FUSRAP in accordance with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) 40 Code of Federal Regulations (CFR) Part 300.

This Community Relations Plan complies with 40 CFR 300.430(c)(2), defining the scope and focus of the Buffalo District's community relations activities and presenting an organized, targeted approach for effective communication and positive, beneficial community relations. Including this overview section, this plan contains five sections: Section 2 provides a capsule description of the Seaway Site, Section 3 provides background information about the community surrounding the site, Section 4 presents the community relations program, and Section 5 lists the documents used to develop this plan. The Appendices provide lists of federal, state and local contacts and available resources.

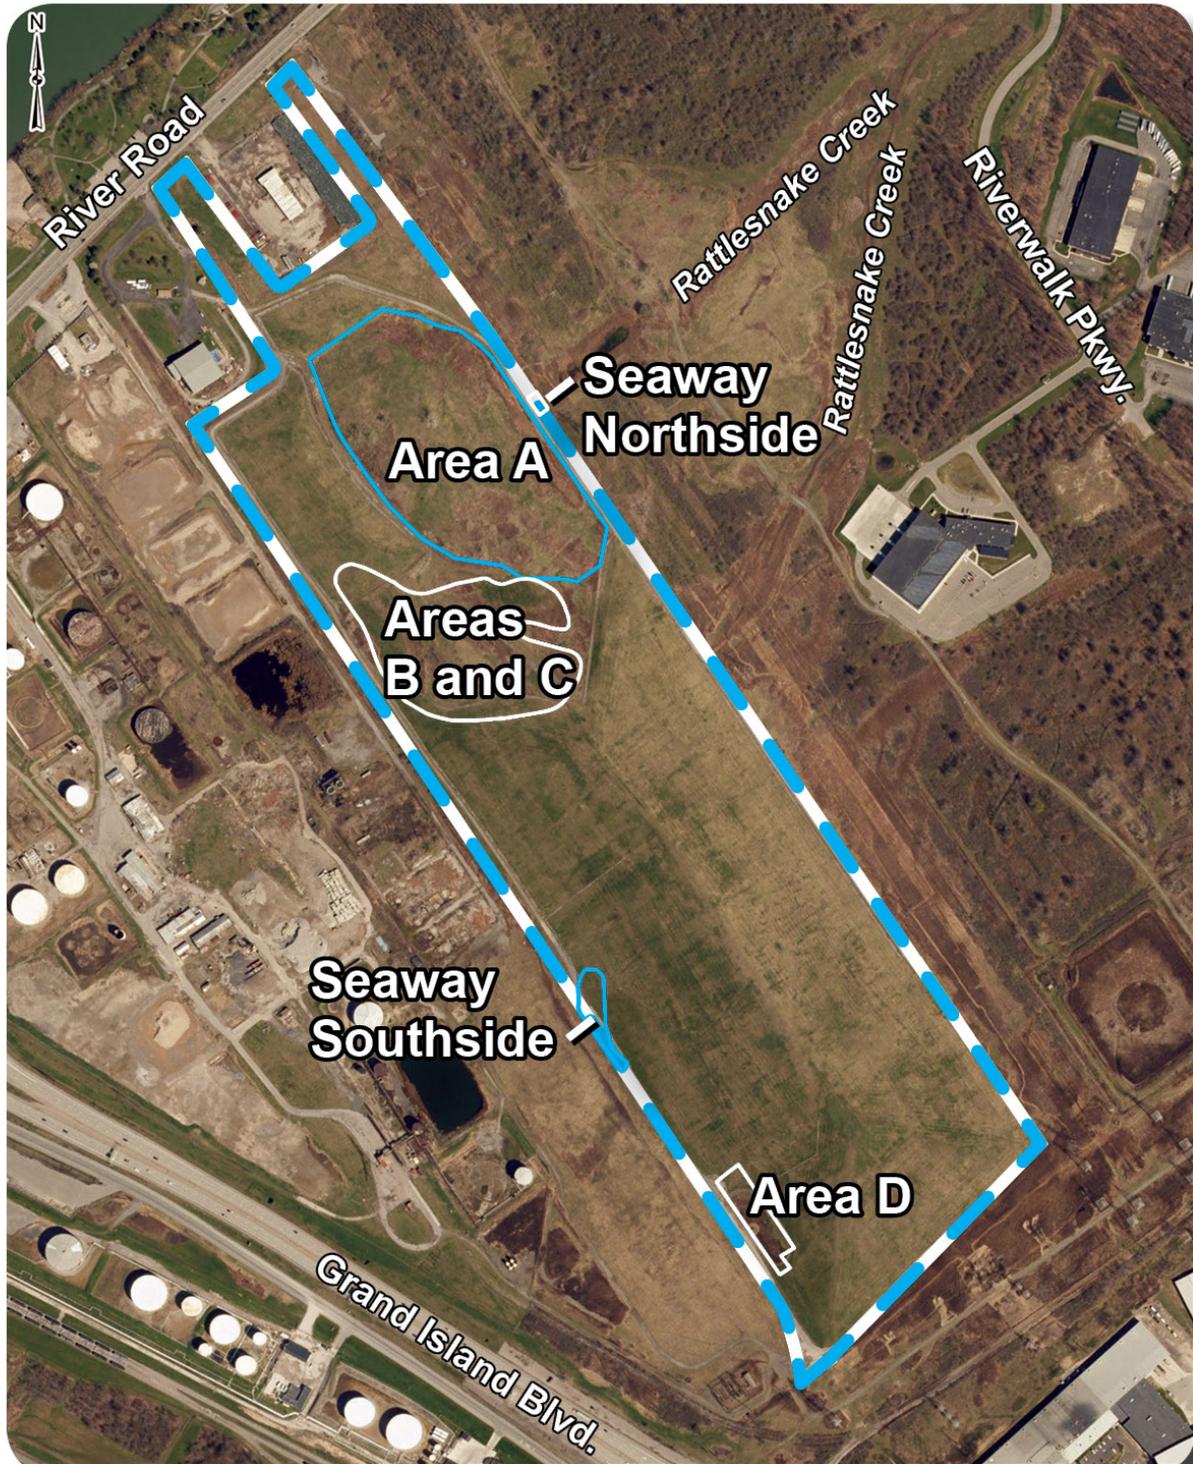

2. Property Description

a. History:

The Seaway Site, located in Tonawanda, New York, was operated as a landfill from 1930 to 1993, accepting a variety of municipal, commercial, construction, and industrial wastes. Nearby, in the 1940s, the former Linde Air Products Division of Union Carbide processed uranium ores under contract to the MED. The mill tailings from the Linde activities were transported from the Linde Site to the former Haist Property, now known as the Ashland 1 Site. During the mid-1970's, Ashland Oil constructed oil tanks on the Ashland 1 property. During the construction of the oil tanks, materials containing radioactive residues were removed from the area and transported by Ashland Oil to the Seaway Landfill and the Ashland 2 Site and used as cover or grading material. This material was also placed in what is now known as Seaway Areas A, B and C.

As a result of remediation of the sites adjacent to the Seaway Site (Ashland 1, including Seaway Area D, and Ashland 2), two additional areas of FUSRAP-related contamination along the Seaway property were identified. These new areas are identified as Seaway Southside and Seaway Northside.

Figure 1: Seaway FUSRAP Site

b. Property Location and Geographic Attributes

i) **Property Location and Description:** The Seaway Site is located within the 100-acre Seaway Industrial Park located along River Road in the Town of Tonawanda, Erie County, New York, which is north of Buffalo and just south of the Niagara River. To the west of the site, next to Interstate 190 are the former Ashland Oil refinery and the Ashland 1 Site (Figure 1). To the east of the Seaway Site is the Ashland 2 Site. These properties are being used primarily for industrial purposes. The nearest residences are located 1/2 mile away from the site to the northwest, across the Niagara River on Grand Island, and to the east in the Town of Tonawanda.

The site provides minimal urban wildlife habitat supporting only birds and small mammals such as crows, gulls, and rats.

Approximately 90% of the site (or 90 acres) were used as a landfill, with approximately 67% of the landfill area capped by the property owner. Seaway Site Area A is a 12-acre area located in the northeast section of the landfill. It is estimated that 40% of Area A is covered by a layer of fill material and refuse up to 10-feet thick. Areas B and C are a contiguous area in the closed portion of the landfill covering about seven acres. It is estimated that portions of Areas B and C have been covered with a thick layer of soil and refuse ranging from a few feet to more than 70 feet.

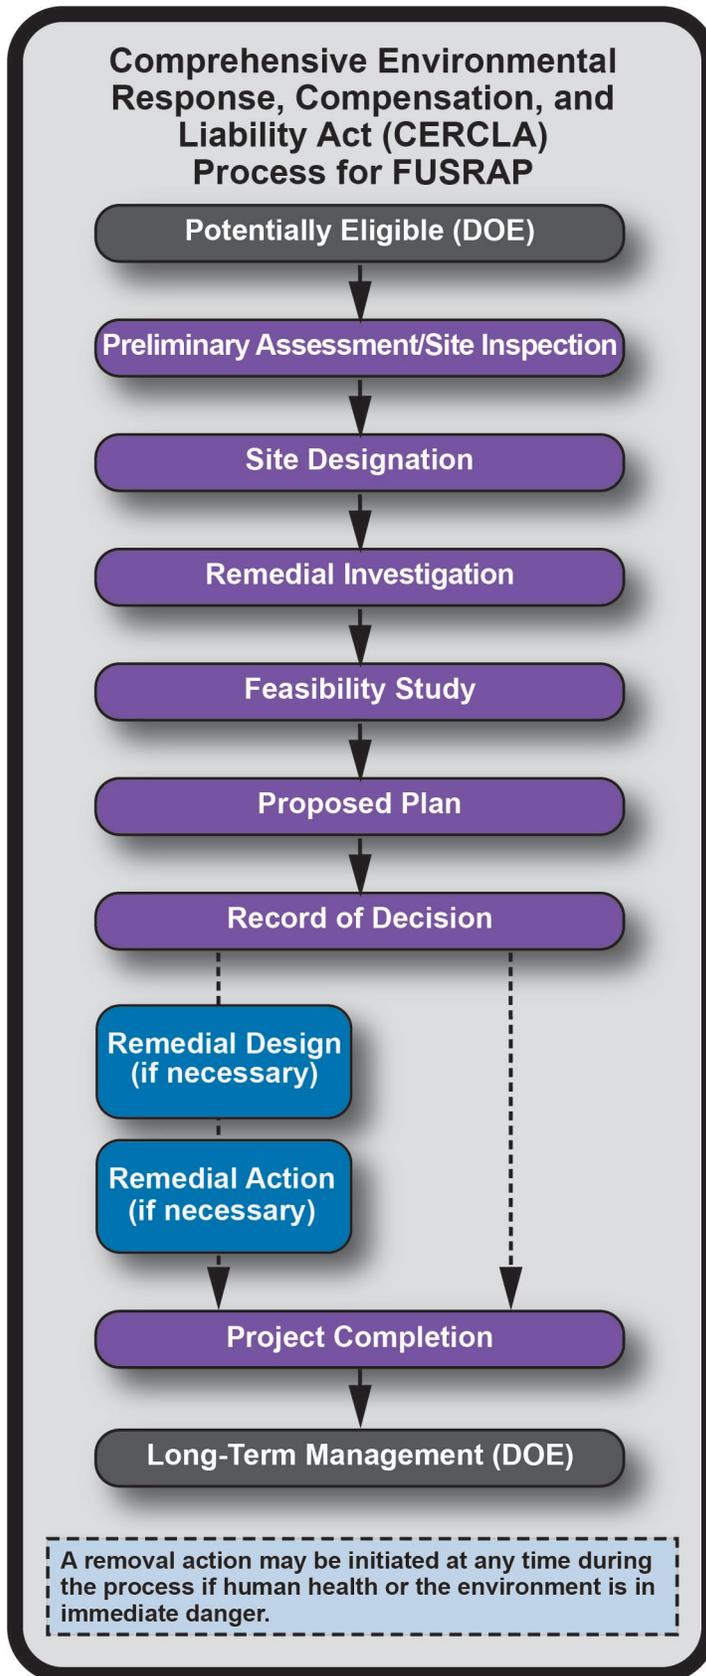

The FUSRAP-related material in Seaway Northside appeared to be the result of surface runoff from Seaway Area A into the drainage system leading into Rattlesnake Creek.

ii) **Current Land Use:** The Seaway Landfill is currently closed. The area surrounding the landfill is commercial/industrial. The Seaway Site is listed as an inactive hazardous waste site by the New York State Department of Environmental Conservation (NYSDEC). This is due to the placement of hazardous materials in the landfill that are not FUSRAP related. The hazardous materials will be within the landfill regardless of whether the FUSRAP-related contamination is removed or contained.

c. Property Investigations:

The Seaway Site was designated into FUSRAP in June 1984 by the DOE based on three previous investigations that were conducted during 1976, 1981, and 1986. First and second phase remedial investigations were conducted by the DOE from January 1988 through April 1988, October 1988 through March 1989, and from November 1990 through May 1991.

As mentioned previously, Congress transferred execution of FUSRAP from the DOE to the Corps in fiscal year 1998 as part of the Energy and Water Development Appropriations Act. The Corps is required by law to conduct FUSRAP investigations in accordance with CERCLA, as amended, and the NCP. A chart outlining the FUSRAP CERCLA process along with an explanation of each phase follows.

Preliminary Assessment/Site Inspection

To determine whether there has been a release or potential release that may require further action or investigation and to assess the nature of associated threats.

Remedial Investigation

To determine the nature and extent of the problem presented by the release.

To evaluate the fate and transport of contaminants through site media (e.g., groundwater, surface water).

To assess potential human health and ecological risks resulting from contaminants in the environment.

Feasibility Study

To identify, develop, and evaluate remedial alternatives, analyzing in detail each remedial alternative for its:

1. Overall protection of human health and the environment.
2. Compliance with applicable or relevant and appropriate requirements (ARARs).
3. Long-term effectiveness and permanence.
4. Reduction of toxicity, mobility, or volume through treatment.
5. Short-term effectiveness.
6. Implementability.
7. Cost.

Proposed Plan

To document the Corps' preferred remedial alternative.

To seek and consider comments from federal and state environmental regulatory agencies.

To seek and consider comments from the public through a mandatory minimum 30-day public review period.

Record of Decision

To document the Corps' selection of the remedial alternative based upon the remedial investigation, the feasibility study, and comments received from federal and state environmental regulatory agencies and the public on the proposed plan.

Remedial Design (if necessary)

To develop detailed designs, plans, specifications, and bid documents for conducting the remedial action.

Remedial Action (if necessary)

Upon approval of the remedial design, remedial action (the actual construction and implementation of the selected remedial alternative) is initiated. The remedial action is conducted until the remedial action objectives are achieved.

Site Closeout

To document and demonstrate that the Corps completed the response action in accordance with the record of decision and in compliance with CERCLA, as amended, and the NCP.

Long-Term Management

Certain remedies may require a period of operation and maintenance, after the remedy is implemented, before the remedial action objectives and cleanup criteria are achieved.

Under FUSRAP the Corps must conduct necessary operations and maintenance and/or site monitoring for the first two years following remedy completion. After that time, the Corps turns the site over to the DOE's Office of Legacy Management for long-term stewardship.

During 1998, the Corps conducted a gamma walkover survey of Areas A, B and C and a limited field investigation involving taking boring samples at the locations exhibiting elevated gamma walkover survey results in Areas B and C. During 2001, a more extensive investigation of Areas B and C was performed, which included down-hole gamma logging, and an on-site gamma spectroscopy analysis with some soil samples being shipped to an off-site laboratory. Additional data was collected for Seaway Southside and Seaway Northside during the remediation of the Ashland 1 and 2 Sites from 2000 through 2006.

The *Record of Decision for the Seaway Site, Town of Tonawanda, New York*, was signed in October 2009. The selected remedy was Alternative 6 of the proposed plan, which requires excavation and off-site transportation, and disposal at an appropriate permitted/licensed disposal facility of FUSRAP-related contaminants outside the landfill's existing leachate collection

system (Seaway Northside and Seaway Southside) and containment of the FUSRAP-related contaminants identified within the footprint of the landfill with an engineered, multi-layered cap approximately 4 to 5.5 feet thick. This engineered cap will be constructed of multiple layers of various types of soil, fabric and geomembranes.

In fiscal year 2015 the Buffalo District initiated excavation and off-site disposal of contaminated soil located beyond the landfill leachate containment system on the Seaway Northside area. This removal was completed in fiscal year 2016 with a total of 1,121 cubic yards of material excavated and shipped off-site for disposal.

During fiscal year 2017 the Buffalo District completed an investigation to delineate the extent of FUSRAP-related contamination within Seaway Southside. Analytical results from soil samples obtained from 15 investigation test pits in the Southside area of the site projected a 70% increase in soil volume requiring excavation and disposal. The FUSRAP-related soils form a lens measuring less than 1-foot thick that extends approximately 100 feet northwest of the previously identified area of contamination at a depth of around 12 feet beneath the landfill embankment.

In April 2020, the Buffalo District began a five-year review of the Seaway Site selected remedy, which is required in CERCLA.

Completion of the selected remedy for the Seaway Site will occur later pending the completion of ongoing remediation at other FUSRAP sites and the availability of program funding.

d. Identified Contaminants:

Radium -226, thorium-230, total uranium, actinium-227 and protactinium-231 are the FUSRAP-related contaminants of concern.

e. Potential Risks:

Throughout the Corps' FUSRAP investigations of the Seaway Site, the Corps has not identified any imminent threat to human health or the environment resulting from exposure to FUSRAP-related materials in the capped or uncapped locations of the landfill. Exposure pathways of incidental soil ingestion, inhalation of fugitive dust, and direct external gamma radiation were considered when calculating human health risks for a hypothetical industrial worker and a hypothetical recreational user. Because exposure to the industrial worker is above the acceptable risk range, action is required to ensure protection of human health and the environment over the long-term. No threatened or endangered species exist on the Seaway Site and ecological risks are minimal.

f. Lead Agency Responsibilities:

The Corps, as the lead agency for FUSRAP, and will coordinate with the U.S. Environmental Protection Agency (EPA), the DOE's Office of Legacy Management, the

NYSDEC, and the NYS Department of Health (NYSDOH) while implementing the Seaway Site selected remedy. Contact information for these agencies is provided in Appendix D.

3. Community Information

a. Community Profile:

The 2010 U.S. census indicates that 73,567 people live in the Town of Tonawanda. The median income per household from the U.S. Census Bureau's American Fact Finder is approximately \$53,336 for the residents in the town.¹

Town of Tonawanda voters elect a supervisor every four years, and elect four council members to the town board for alternating four-year terms. Residents direct their questions and comments to the town clerk, who forwards them to the proper department or official.

Erie County government includes a county executive that is the chief executive officer and administrative head of the county. The county executive is elected to a four-year term. Erie County has an 11-member legislature presided over by a chairman that is elected each year by a majority vote of the full legislature. The members of the county legislature are elected for a two-year term.

b. Community Perception:

Based on the Corps' interpretation of historical information including newspaper clips, correspondence, and input received from the community, the community's perception of the Seaway Site is that the record of decision should have selected excavation and off-site disposal of the FUSRAP-related material within the landfill as the remedy rather than capping.

c. Community Involvement History:

Updates for the community regarding the Seaway Site were provided during community meetings conducted for the Linde and Ashland Sites in Tonawanda, New York. On August 27, 2008, the proposed plan for the Seaway Site was made available for a 60-day public comment period. A public meeting was conducted on September 24, 2008. At the time, the Town of Tonawanda Supervisor, a Town of Tonawanda Planning Board member, and one member of the public provided comments during the public meeting. A request for an extension to the comment period was received and granted; extending the comment period to November 28, 2008.

d. Key Community Concerns:

Concerns expressed by the community to the Corps regarding the Seaway Site have focused on human health. Many members of public fear the potential health impacts of nuclear radiation. They would prefer the FUSRAP-related material within the landfill be removed rather than capped in place to be protective of human health and the environment over the long term.

¹ [United States Census Bureau](https://www.census.gov). Retrieved on July 29, 2013.

e. Response to Community Concerns:

The Corps values the input received from the community. The goal of this plan and its implementation is to address the community's informational and participation needs to the extent allowed by law and within the agency's resources.

The selected remedy outlined in the record of decision affords the most protection to human health and the environment, as it eliminates the potential for exposure to FUSRAP-related material within the landfill. Excavation of FUSRAP-related material buried within an inactive hazardous waste disposal site would pose unnecessary risk to workers and the surrounding community by potentially generating hazardous dust, emissions, and odors. The exact nature of the non-FUSRAP-related hazardous materials with which the FUSRAP material is intermixed is neither quantified nor defined, imposing additional unknown potential risks that could complicate removal, increase safety hazards, and escalate costs.

f. Summary of Communication Needs:

The community desires to be kept informed during the remedial action phase for the Seaway Site. This will be addressed through the implementation of this plan.

4. Community Relations Program

a. Approach/Plan:

The Corps is committed to informing the public as it implements the selected remedy for the Seaway Site. The Corps has established the following overall goals for the community relations program that will attempt to address the expressed concerns of the community. The Corps will:

- Foster and maintain a climate of understanding and trust between the public and the Corps;
- Ensure that the public understands that protection of human health and the environment is the paramount concern at the Seaway Site and that work at the site will be conducted safely;
- Encourage and enable all interested members of the public to be involved and provide input;
- Foster opportunities for genuine dialogue regarding issues of importance to the community;
- Prepare information and provide opportunities for the public to fully understand, and ask questions about the site;
- Listen carefully to what the public expresses;
- Identify and act responsively on public concerns; and
- Allow for flexible planning to enable public comments or concerns to be considered during decision-making and prior to execution of actions.

The Corps' community relations goals and needs will be considered and balanced with the project's technical and scientific requirements as well as limitations on funding, staffing, and legal and contracting actions. The following plan was developed to address communication needs during implementation of the selected remedy for the Seaway Site in regard to the community's concerns. The Corps will engage the community by implementing the following activities:

Activity 1: During the implementation of the selected remedy, the Corps requires contractors to provide safety and health plans that ensure that on-site workers, as well as the surrounding community, are being protected. Safety measures will be enacted to ensure protection of the public during site work. This includes perimeter air monitoring which is performed to ensure that FUSRAP-related materials are not being transported off-site or presenting a risk to the community.

Objective: Protect human health and the environment during site work.

Method: Contractor Site Safety and Health Plans and Accident Prevention Plans will be in place during implementation of the selected remedy. The contractor will also be required to have an on-site Radiation Safety Officer during the work.

Timing: The Corps will review the contractor's plans before work begins.

Activity 2: Information Sessions

Objective: Provide the public with the opportunity to learn how implementation of the selected remedy will be conducted at the site.

Method: An information session will be conducted in the Community Room of the Phillip Sheridan Building of the Kenmore-Town of Tonawanda Union Free School District at 3200 Elmwood Avenue, Kenmore, New York or another near the site. The Corps' Project Manager, Project Engineer, Outreach Program Specialist and other appropriate staff will attend.

Timing: Before work begins.

Activity 3: Provide a toll-free "800 number" and an e-mail address for the community to contact the Corps Buffalo District.

Objective: Enable citizens' ability to request the latest information available when they want it rather than having to wait for a meeting or a fact sheet.

Method: The toll-free number and e-mail address will be included in any news releases, fact sheets and advertisements made that pertain to the Seaway Site.

Timing: Both the toll-free line, 1-800-833-6390 option 4, and the e-mail address: fusrap@usace.army.mil are currently operational.

Activity 4: Public website

Objective: Provide a publicly accessible repository for project information.

Method: The Seaway Site website is

<https://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/Seaway-Site/>

Timing: The website is available now and will be updated periodically as necessary.

Activity 5: "Beyond the Headlines" website postings

Objective: Correct factual errors or omissions in media reports on Corps' projects.

Method: A “Beyond the Headlines” section will be created in the News section Seaway Site website at: <https://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/Seaway-Site/>
Timing: “Beyond the Headlines” postings will be added to the website as necessary.

Activity 6: Maintain a postal mailing list for the site.

Objective: Facilitate the distribution of new site-specific information to everyone who needs or wants to be kept informed about the site.

Method: The Corps established a mailing list compiled of addresses gathered over the years from public information session sign-in sheets.

Timing: The postal mailing list will be reviewed and revised periodically (at least annually) to keep it current.

Activity 7: Distribute emails to those interested in the site as new information becomes available.

Objective: Provide timely information to the public in a rapid way.

Method: “*News from the Corps*” emails will whenever new information is available in regard to the site.

Timing: The electronic mailing list is updated as emails bounce back undeliverable or as new requests are made to be added to the list. News from the Corps emails are sent as new information becomes available.

Activity 8: Prepare and distribute site fact sheets, technical summaries and reports.

Objective: Provide citizens with current, accurate, easy-to-read, easy-to-understand information about the site.

Method: Fact sheets, technical summaries and reports will be prepared as necessary and be placed on the public website when complete.

Timing: The Corps will prepare and distribute fact sheets, technical summaries and reports as they become available throughout the lifecycle of the project.

Activity 9: Social media

Objective: Expand the dissemination of information beyond those that have expressed an interest in the Seaway Site.

Method: Twitter, Facebook, and YouTube will be used when pertinent.

Timing: The Corps will explore using social media for the Seaway Site as the opportunity presents itself.

Activity 10: Activities of the Outreach Program Specialist

Objective: Provide a primary liaison between the community and the Buffalo District, and to ensure prompt, accurate, and consistent responses and information dissemination about the site. In those instances where the Outreach Program Specialist may be unable to provide adequate information (such as on technical issues), responses will be coordinated with the appropriate contact.

Method: The Outreach Program Specialist will provide responses to site inquiries and serve as a point of contact for community members.

Timing: The Outreach Program Specialist for the site was designated on November 11, 2007, and continues in that role.

Activity 11: Publish announcements.

Objective: Ensure that the full community is informed about upcoming meetings.

Method: Create and place a display ad in local newspapers to include *The Buffalo News*, and the *Ken-Ton Bee*. Announcements will be formatted to provide the following information at a minimum: date, time, and location for the meeting; statement of purpose for the meeting; structure of the meeting; and a website address for supporting documents.

Timing: Announcements will be made a minimum of 14 days in advance.

Activity 12: Issue the Community Relations Plan

Objective: Identify and address community needs, issues, or concerns regarding the Seaway Site.

Method: The written Community Relations Plan will be placed on the Seaway Site website.

Timing: This Community Relations Plan is for the Seaway Site remedial action phase. It will be updated as necessary.

b. Projected Schedule for Community Relations Activities

ACTIVITY	TIMEFRAME
1 Site Safety and Health Plans and Accident Prevention Plans	Before site work commences
2 Information session	Before site work commences
3 Provide a toll-free “800 number” and e-mail address for the community to contact the Corps	Currently in operation
4 Maintain a public website	Ongoing
5 “Beyond the Headlines” website postings	As needed
6 Maintain a postal mailing list for the site	Ongoing
7 Maintain an electronic mailing list for the site	Ongoing
8 Prepare and distribute site fact sheets, technical summaries and reports	As needed
9 Social media	As needed
10 Designate Corps Outreach Program Specialist	Complete
11 Public announcements	As necessary
12 Issue the Community Relations Plan	Complete
