BLACK RIVER WETLANDS, LORAIN, OH

Regional Sediment Management - Beneficial Use of Dredged Material
Section 204 of the Water Resources Development Act of 1992, as amended
Construction General (Continuing Authorities Program)

Location

- Located on Lake Erie in the City of Lorain, Lorain County, Ohio

Project Description

- This authority evaluates the use of dredged material from new or existing Federal projects to protect, restore, or create aquatic and ecologically related habitats, including wetlands; to reduce storm damage to property, in connection with dredging for construction, operation, or maintenance of an authorized navigation project
- This project will create spawning habitat for Walleye and other fish species. acres of submerged aquatic habitat
- Feasibility phase is 100% funded with Federal capital. Design and Implementation phase is cost-shared 65% federal and 35% non-federal

Importance

- Create 14 acres of optimal spawning habitat for walleye and other Great Lakes fish species, including smallmouth bass, white sucker, and perch.
- Restore historic spawning grounds, specifically expansive gravel/cobbles shoals, that once existed at the mouths of the tributaries to Lake Erie prior to the construction of Federal harbors and shoreline development

Consequence

- Spawning habitat for Smallmouth bass and other native species would remain scarce.
- Other aquatic organism that are critical inputs to the lifecycle of native fish would remain limited.
