Current Condition: Several Ohio shallow draft harbors are in serious need of maintenance dredging and/or navigation structure repair. Lack of maintenance at these harbors will lead to increased shoaling and structure deterioration resulting in limited usage and/or unsafe navigation conditions within the harbor and navigation channels.

Background: Shallow draft harbors within Ohio include Cooley Canal, Port Clinton, Put-In-Bay, Rocky River, Toussaint, Vermilion, and West Harbors. Shallow draft harbors are for recreational purposes, with no defined commercial traffic. These projects generally consist of a shallow channel (4–14 feet deep) and a relatively small system of breakwaters and/or piers.

Significance: The Ohio shallow draft harbors help to support the regional economy by providing an additional source of revenue, jobs, and income to the area. The harbors support recreational interests and numerous regionally significant businesses interests. Major business interests include marinas, charter fishing, tourism, and gasoline and marine product sales. In addition, all of the harbors serve as designated harbors of refuge which provide refuge to water crafts during severe lake storms.
