

**APPROVED JURISDICTIONAL DETERMINATION FORM**  
**U.S. Army Corps of Engineers**

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

**SECTION I: BACKGROUND INFORMATION**

**A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD):** December 12, 2017

**B. DISTRICT OFFICE, FILE NAME, AND NUMBER:** District Office, LRB-1997-9760182-Good Earth Organics (Mr. Guenter Burkhardt) Wetlands W1, W3, W4, W7, Pond 3, Ditch 1, and Ditch 2, Form 1 of 1

**C. PROJECT LOCATION AND BACKGROUND INFORMATION:**

State: New York County/parish/borough: Erie City: Town of Lancaster  
Center coordinates of site (lat/long in degree decimal format): Lat. 42.895672 °N, Long. 78.630491 °W  
Universal Transverse Mercator: 17

Name of nearest waterbody: Plum Bottom Creek (on-site)

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: N/A (isolated waters and non-jurisdictional features)

Name of watershed or Hydrologic Unit Code (HUC): Cayuga Creek (04120103)

- Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.  
 Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form

**D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):**

- Office (Desk) Determination. Date: November 2, 2017  
 Field Determination. Date(s): October 27, 2017

**SECTION II: SUMMARY OF FINDINGS**

**A. RHA SECTION 10 DETERMINATION OF JURISDICTION.**

There are **no** "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [Required]

- Waters subject to the ebb and flow of the tide.  
 Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.  
Explain: [Click here to enter text.](#)

**B. CWA SECTION 404 DETERMINATION OF JURISDICTION.**

There are **no** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]

**1. Waters of the U.S.**

**a. Indicate presence of waters of U.S. in review area (check all that apply):<sup>1</sup>**

- TNWs, including territorial seas  
 Wetlands adjacent to TNWs  
 Relatively permanent waters<sup>2</sup> (RPWs) that flow directly or indirectly into TNWs  
 Non-RPWs that flow directly or indirectly into TNWs  
 Wetlands directly abutting RPWs that flow directly or indirectly into TNWs  
 Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs  
 Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs  
 Impoundments of jurisdictional waters  
 Isolated (interstate or intrastate) waters, including isolated wetlands

**b. Identify (estimate) size of waters of the U.S. in the review area:**

Non-wetland waters: # linear feet: # width (ft) and/or # acres.

Wetlands: # acres.

**c. Limits (boundaries) of jurisdiction based on: *Choose an item.***

Elevation of established OHWM (if known): [Click here to enter text.](#)

**2. Non-regulated waters/wetlands (check if applicable):<sup>3</sup>**

- Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional.

<sup>1</sup> Boxes checked below shall be supported by completing the appropriate sections in Section III below.

<sup>2</sup> For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).

<sup>3</sup> Supporting documentation is presented in Section III.F.

Explain:

**Wetland W1** (0.08 acre) is located in a closed micro-topographic depression on the landscape surrounded by higher elevation uplands. The wetland receives hydrology from precipitation and surrounding runoff; the wetland did not contain surface water during the October 2017 site visit. No evidence of outflow or overland flow from the wetland was observed. The wetland is surrounded by upland, primarily old piles of earthen material, and has no swales, ditches, pipes, storm drains, or other discrete/confined conveyances that would provide a surface hydrologic connection to another water of the United States (WOUS). Stream 1 (on-site) is approximately 101.8 feet north of Wetland W1; Ditch 1 (on-site) is less than 100 feet west of Wetland W1. Piles of Earthen material separate Wetland W1 from Stream 1 and Ditch 1; thus, the topography of the upland between Wetland W1 and Stream 1 and Ditch 1 does not indicate potential for hydrologic connectivity. The wetland has been determined to not have a surface or shallow subsurface hydrologic connection to any navigable waters or their tributaries.

**Wetland W3** (0.01 acre) is located in a closed micro-topographic depression that formed on old piles of earthen material and is surrounded by higher elevation uplands. The wetland receives hydrology from precipitation and surrounding runoff; the wetland contained surface water during the October 2017 site visit, however, no evidence of outflow or overland flow from the wetland was observed. The wetland is surrounded by upland, primarily old piles of earthen material that are located within the footprint of the existing facility, and has no swales, ditches, pipes, storm drains, or other discrete/confined conveyances that would provide a surface hydrologic connection to another water of the United States (WOUS). Stream 3 (on-site) is approximately 365.8 feet north of Wetland W3; Ditch 2 (on-site) is approximately 66.9 feet northeast of Wetland W3. Piles of Earthen material separate Wetland W3 from Stream 3 and Ditch 2; thus, the topography of the upland between Wetland W3 and Stream 3 and Ditch 2 does not indicate potential for hydrologic connectivity. The wetland has been determined to not have a surface or shallow subsurface hydrologic connection to any navigable waters or their tributaries.

**Wetland W4** (0.07 acre) is located in a closed micro-topographic depression that formed on old piles of earthen material and is surrounded by higher elevation uplands. The wetland receives hydrology from precipitation and surrounding runoff; the wetland did not contain surface water during the October 2017 site visit, however, no evidence of outflow or overland flow from the wetland was observed. The wetland is surrounded by upland, primarily piles of earthen material that are located within the footprint of the existing operational facility, and has no swales, ditches, pipes, storm drains, or other discrete/confined conveyances that would provide a surface hydrologic connection to another water of the United States (WOUS). Stream 2 (on-site) is approximately 410.9 feet north of Wetland W4. Piles of Earthen material separate Wetland W4 from Stream 2. Thus, the topography of the upland between Wetland W4 and Stream 2 does not indicate potential for hydrologic connectivity. The wetland has been determined to not have a surface or shallow subsurface hydrologic connection to any navigable waters or their tributaries.

**Wetland W7** (0.10 acre) is located in a closed micro-topographic depression that formed in a former access road associated with previous use of the facility. The wetland receives hydrology from precipitation and surrounding runoff; the wetland did not contain surface water during the October 2017 site visit. No evidence of outflow or overland flow from the wetland was observed. The wetland is surrounded by upland, primarily old piles of earthen material that are located within the footprint of the existing facility, and has no swales, ditches, pipes, storm drains, or other discrete/confined conveyances that would provide a surface hydrologic connection to another water of the United States (WOUS). Pond 1 (on-site), an impoundment of Streams 2 and 3, is approximately 96.6 feet northwest of Wetland W7. The wetland has been determined to not have a surface or shallow subsurface hydrologic connection to any navigable waters or their tributaries.

As noted above, the topography of the uplands surrounding Wetlands W1, W3, W4, and W7 do not indicate potential for hydrologic connectivity. Based on observation made during the 27 October 2017 field investigation, and review of historic aerials, it appears as though Wetlands W1, W3, W4, and W7 formed as a result of the placement of the earthen piles. No evidence of subsurface flow was observed during the site visit. The wetlands have been determined to not have a surface or shallow subsurface hydrologic connection to any navigable waters or their tributaries. The wetlands are surrounded by piles of earthen material and do not have surface hydrological connections to a tributary.

Based upon a review of aerial photographs, the USGS 7.5 Minute Quad, the National Hydrography Dataset (NHD), the National Wetland Inventory (NWI) maps, topographic data (USGS Quad map), on-site observations, and the materials submitted by the agent, Wetlands W1, W3, W4 and W7 have been determined to be hydrologically isolated with no surface water connection to a WOUS.

Wetlands W1, W3, W4 and W7 do not support a link to interstate or foreign commerce because the wetlands are not known to be used by interstate or foreign travelers for recreation or other purposes. The wetlands do not produce fish or shellfish that could be taken and sold in interstate or foreign commerce. The wetlands are not known to be used for industrial purposes by industries in interstate or foreign commerce. Wetlands W1, W3, W4, and W7 have been determined to not be WOUS and are therefore not jurisdictional under the CWA.

**Pond 3** (0.06 acre) is an open water feature that formed as a result of soil excavation. No evidence of outflow or overland flow from the pond was observed. The Pond is surrounded by higher elevation uplands including piles of old earthen material, and has no swales, ditches, pipes, storm drains, or other discrete/confined conveyances that would provide a surface hydrologic connection to another WOUS. Pond 3 has been determined to not meet the definition of a water of the U.S.

**Ditch 1** (655 linear feet) and **Ditch 2** (279 linear feet) are man-made, non-jurisdictional features. Ditch 1 and Ditch 2 were dug wholly in uplands, are draining wholly uplands, and have less than relatively permanent flow. Ditches 1 and 2 are man-made features that were dug/created as a result of operational activity at the existing facility. Ditch 1 is evident in aerial imagery from 1966 and was associated with an agricultural field. Per the 1986 Regulations Preamble, 2007 U.S. Army Corps of Engineers Jurisdictional Determination Form Instructional Guidebook, and the 2008 Rapanos Guidance, Ditch 1 and Ditch 2 are not considered waters of the U.S.

### **SECTION III: CWA ANALYSIS**

**A. TNWs AND WETLANDS ADJACENT TO TNWs**

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

**1. TNW**

Identify TNW: [Click here to enter text.](#)

Summarize rationale supporting determination: [Click here to enter text.](#)

**2. Wetland adjacent to TNW**

Summarize rationale supporting conclusion that wetland is “adjacent”: [Click here to enter text.](#)

**B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):**

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody<sup>4</sup> is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

**1. Characteristics of non-TNWs that flow directly or indirectly into TNW**

**(i) General Area Conditions:**

Watershed size: # [Choose an item.](#)

Drainage area: # [Choose an item.](#)

Average annual rainfall: # inches

Average annual snowfall: # inches

**(ii) Physical Characteristics:**

**(a) Relationship with TNW:**

Tributary flows directly into TNW.

Tributary flows through [Choose an item.](#) tributaries before entering TNW.

Project waters are [Choose an item.](#) river miles from TNW.

Project waters are [Choose an item.](#) river miles from RPW.

Project waters are [Choose an item.](#) aerial (straight) miles from TNW.

Project waters are [Choose an item.](#) aerial (straight) miles from RPW.

Project waters cross or serve as state boundaries. Explain: [Click here to enter text.](#)

Identify flow route to TNW<sup>5</sup>: [Click here to enter text.](#)

Tributary stream order, if known: [Click here to enter text.](#)

**(b) General Tributary Characteristics (check all that apply):**

**Tributary is:**  Natural

Artificial (man-made). Explain: [Click here to enter text.](#)

Manipulated (man-altered). Explain: [Click here to enter text.](#)

**Tributary properties with respect to top of bank (estimate):**

Average width: # feet

Average depth: # feet

Average side slopes: [Choose an item.](#)

<sup>4</sup> Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

<sup>5</sup> Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Primary tributary substrate composition (check all that apply):

- |  |  |                                   |
|--|--|-----------------------------------|
| <input type="checkbox"/> Silts   | <input type="checkbox"/> Sands   | <input type="checkbox"/> Concrete |
| <input type="checkbox"/> Cobbles   | <input type="checkbox"/> Gravel  | <input type="checkbox"/> Muck     |
| <input type="checkbox"/> Bedrock   | <input type="checkbox"/> Vegetation. Type/% cover: <a href="#">Click here to enter text.</a> |                                   |
| <input type="checkbox"/> Other. Explain: <a href="#">Click here to enter text.</a> |  |                                   |

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: [Click here to enter text.](#)

Presence of run/riffle/pool complexes. Explain: [Click here to enter text.](#)

Tributary geometry: [Choose an item.](#)

Tributary gradient (approximate average slope): #%

(c) **Flow:**

Tributary provides for: [Choose an item.](#)

Estimate average number of flow events in review area/year: [Choose an item.](#)

Describe flow regime: [Click here to enter text.](#)

Other information on duration and volume: [Click here to enter text.](#)

Surface flow is: [Choose an item.](#) Characteristics: [Click here to enter text.](#)

Subsurface flow: [Choose an item.](#) Explain findings: [Click here to enter text.](#)

Dye (or other) test performed: [Click here to enter text.](#)

Tributary has (check all that apply):

- |  |   |
|--|---|
| <input type="checkbox"/> Bed and banks   |   |
| <input type="checkbox"/> OHWM <sup>6</sup> (check all indicators that apply):                                |   |
| <input type="checkbox"/> clear, natural line impressed on the bank   | <input type="checkbox"/> the presence of litter and debris  |
| <input type="checkbox"/> changes in the character of soil  | <input type="checkbox"/> destruction of terrestrial vegetation                                      |

|--|--|
| <input type="checkbox"/> High Tide Line indicated by:                            | <input type="checkbox"/> Mean High Water Mark indicated by:            |
| <input type="checkbox"/> oil or scum line along shore objects                    | <input type="checkbox"/> survey to available datum;                    |
| <input type="checkbox"/> fine shell or debris deposits (foreshore)               | <input type="checkbox"/> physical markings;                            |
| <input type="checkbox"/> physical markings/characteristics                       | <input type="checkbox"/> vegetation lines/changes in vegetation types. |
| <input type="checkbox"/> tidal gauges  |  |
| <input type="checkbox"/> other (list): <a href="#">Click here to enter text.</a> |  |

**(iii) Chemical Characteristics:**

Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).

Explain: [Click here to enter text.](#)

Identify specific pollutants, if known: [Click here to enter text.](#)

**(iv) Biological Characteristics. Channel supports (check all that apply):**

- Riparian corridor. Characteristics (type, average width): [Click here to enter text.](#)
- Wetland fringe. Characteristics: [Click here to enter text.](#)
- Habitat for:
  - Federally Listed species. Explain findings: [Click here to enter text.](#)
  - Fish/spawn areas. Explain findings: [Click here to enter text.](#)

<sup>6</sup>A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.

<sup>7</sup>Ibid.

- Other environmentally-sensitive species. Explain findings: [Click here to enter text.](#)
- Aquatic/wildlife diversity. Explain findings: [Click here to enter text.](#)

**2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW**

**(i) Physical Characteristics:**

**(a) General Wetland Characteristics:**

Properties:

Wetland size: # acres

Wetland type. Explain: [Click here to enter text.](#)

Wetland quality. Explain: [Click here to enter text.](#)

Project wetlands cross or serve as state boundaries. Explain: [Click here to enter text.](#)

**(b) General Flow Relationship with Non-TNW:**

Flow is: [Choose an item.](#) Explain: [Click here to enter text.](#)

Surface flow is: [Choose an item.](#)

Characteristics: [Click here to enter text.](#)

Subsurface flow: [Choose an item.](#) Explain findings: [Click here to enter text.](#)

Dye (or other) test performed: [Click here to enter text.](#)

**(c) Wetland Adjacency Determination with Non-TNW:**

Directly abutting

Not directly abutting

Discrete wetland hydrologic connection. Explain: [Click here to enter text.](#)

Ecological connection. Explain: [Click here to enter text.](#)

Separated by berm/barrier. Explain: [Click here to enter text.](#)

**(d) Proximity (Relationship) to TNW**

Project wetlands are [Choose an item.](#) river miles from TNW.

Project waters are [Choose an item.](#) aerial (straight) miles from TNW.

Flow is from: [Choose an item.](#)

Estimate approximate location of wetland as within the [Choose an item.](#) floodplain.

**(ii) Chemical Characteristics:**

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: [Click here to enter text.](#)

Identify specific pollutants, if known: [Click here to enter text.](#)

**(iii) Biological Characteristics. Wetland supports (check all that apply):**

Riparian buffer. Characteristics (type, average width): [Click here to enter text.](#)

Vegetation type/percent cover. Explain: [Click here to enter text.](#)

Habitat for:

Federally Listed species. Explain findings: [Click here to enter text.](#)

Fish/spawn areas. Explain findings: [Click here to enter text.](#)

Other environmentally-sensitive species. Explain findings: [Click here to enter text.](#)

Aquatic/wildlife diversity. Explain findings: [Click here to enter text.](#)

**3. Characteristics of all wetlands adjacent to the tributary (if any)**

All wetland(s) being considered in the cumulative analysis: [Choose an item.](#)

Approximately (#) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

<u>Directly abuts? (Y/N)</u>	<u>Size (in acres)</u>	<u>Directly abuts? (Y/N)</u>	<u>Size (in acres)</u>
<a href="#">Y/N</a>	#	<a href="#">Y/N</a>	#
<a href="#">Y/N</a>	#	<a href="#">Y/N</a>	#
<a href="#">Y/N</a>	#	<a href="#">Y/N</a>	#
<a href="#">Y/N</a>	#	<a href="#">Y/N</a>	#

Summarize overall biological, chemical and physical functions being performed: [Click here to enter text.](#)

**C. SIGNIFICANT NEXUS DETERMINATION**

**A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a**

**TNW.** For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

**Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:**

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

*Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:*

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: [Click here to enter text.](#)
2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: [Click here to enter text.](#)
3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: [Click here to enter text.](#)

**D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):**

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:

- TNWs: # linear feet # width (ft), Or, # acres.
- Wetlands adjacent to TNWs: # acres.

2. **RPWs that flow directly or indirectly into TNWs.**

- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: [Click here to enter text.](#)
- Tributaries of TNW where tributaries have continuous flow “seasonally” (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: [Click here to enter text.](#)

Provide estimates for jurisdictional waters in the review area (check all that apply):

- Tributary waters: # linear feet # width (ft).
- Other non-wetland waters: # acres.

Identify type(s) of waters: [Click here to enter text.](#)

3. **Non-RPWs<sup>8</sup> that flow directly or indirectly into TNWs.**

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional waters within the review area (check all that apply):

- Tributary waters: # linear feet # width (ft).
- Other non-wetland waters: # acres.

Identify type(s) of waters: [Click here to enter text.](#)

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
  - Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: [Click here to enter text.](#)
  - Wetlands directly abutting an RPW where tributaries typically flow “seasonally.” Provide data indicating that

<sup>8</sup>See Footnote # 3.

tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: [Click here to enter text.](#)

Provide acreage estimates for jurisdictional wetlands in the review area: # acres.

**5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetlands in the review area: # acres.

**6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**

- Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetlands in the review area: # acres.

**7. Impoundments of jurisdictional waters.<sup>9</sup>**

As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.

- Demonstrate that impoundment was created from “waters of the U.S.,” or
- Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
- Demonstrate that water is isolated with a nexus to commerce (see E below).

**E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):<sup>10</sup>**

- which are or could be used by interstate or foreign travelers for recreational or other purposes.
- from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
- which are or could be used for industrial purposes by industries in interstate commerce.
- Interstate isolated waters. Explain: [Click here to enter text.](#)
- Other factors. Explain: [Click here to enter text.](#)

**Identify water body and summarize rationale supporting determination:** [Click here to enter text.](#)

Provide estimates for jurisdictional waters in the review area (check all that apply):

- Tributary waters: # linear feet # width (ft).
- Other non-wetland waters: # acres.
- Identify type(s) of waters: [Click here to enter text.](#)

Wetlands: # acres.

**F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):**

- If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
- Prior to the Jan 2001 Supreme Court decision in “SWANCC,” the review area would have been regulated based solely on the “Migratory Bird Rule” (MBR).
- Waters do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction. Explain: [Click here to enter text.](#)
- Other: (explain, if not covered above): **Pond 3 (0.06 acre), Ditch 1 (655 linear feet) and Ditch 2 (279 linear feet); Refer to Section II.B.2 for detailed descriptions of non-jurisdictional features.**

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non-wetland waters (i.e., rivers, streams): # linear feet # width (ft).
- Lakes/ponds: # acres.
- Other non-wetland waters: # acres. List type of aquatic resource: [Click here to enter text.](#)
- Wetlands: Wetland W1 (0.08 acre), Wetland W3 (0.01 acre), Wetland W4 (0.07 acre) and Wetland 7 (0.10 acre).**

<sup>9</sup> To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.

<sup>10</sup> Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters (i.e., rivers, streams): # linear feet # width (ft).
- Lakes/ponds:
- Other non-wetland waters: # acres. List type of aquatic resource: [Click here to enter text.](#)
- Wetlands:

#### **SECTION IV: DATA SOURCES.**

**A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):**

- Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Location Map, Delineation Map
- Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - Office concurs with data sheets/delineation report.
  - Office does not concur with data sheets/delineation report.
- Data sheets prepared by the Corps: [Click here to enter text.](#)
- Corps navigable waters' study: [Click here to enter text.](#)
- U.S. Geological Survey Hydrologic Atlas: USACE ORM NHD Datasets
  - USGS NHD data.
  - USGS 8 and 12 digit HUC maps.
- U.S. Geological Survey map(s). Cite scale & quad name: 7.5 Minute Lancaster
- USDA Natural Resources Conservation Service Soil Survey. Citation: NRCS Web Soil Survey
